CONTENTS

OF THE

REGISTRAR GENERAL'S ANNUAL REPORT FOR 1875.

REPORT:—

	PAGES
GENERAL REVIEW of FACTS for the Year	v-viii
AMENDMENT of the REGISTRATION ACT	viii-x
EMIGRATION from the UNITED KINGDOM	x-xiii
INCREASE of POPULATION	xiii
METEOROLOGY at GREENWICH; PRICES of WHEAT, MEAT and POTATOES; PAUPERISM	xiii-xv
MARRIAGES; FACILITIES FOR MARRIAGE; Marriage-rate; Number celebrated according and <i>not</i> according to the Rites of the Estab- lished Church; Conditions of Persons married; Ages of Persons married; Marriages of Minors; Signatures in Marriage Registers; Educational condition of different Counties, as shown by the Signa- tures of Marriage Registers; Buildings registered for the Solemniza- tion of Marriages; Certified Places of Worship; Designations of Religious Bodies	xv-xxiv
BIRTHS. Number registered; Birth-rate; Sex; Still-born Children; Children born out of Wedlock	xxiv-xxvii
DEATHS. Number registered; Death-rate; Mortality in Town and Country; Mortality of Males and Females at various Ages; Seasons; Locality; Sanitary State of 18 urban registration Districts; Mor- tality of Children under One Year of Age in England; and from different Causes in 15 large Towns; Mortality of <i>illegitimate</i> <i>Infants</i> ; Mortality of Infants at each Month of Age; Mortality of <i>illegitimate Infants</i> from different Causes. Death-rate of Chil- dren under Five Years of Age; Deaths in Public Institutions	xxvii-liii
PROGRESS of REGISTRATION. Aggregate Number of NAMES on the REGISTERS, Particulars as to the Alphabetical Index to the Names, and NUMBER of SEARCHES in the Registers and of CERTIFICATES granted at the CENTRAL OFFICE	liii
UNITED KINGDOM. Population, Emigration, Marriage, Birth, and Death Rates	liv-lv
THE ARMY. STRENGTH and MORTALITY of the ARMY at HOME and ABROAD	lv
THE NAVY. STRENGTH and MORTALITY of the NAVY	lv-lvii
BIRTHS and DEATHS of BRITISH SUBJECTS at SEA; MARINE REGISTER BOOK; MORTALITY of MERCANTILE MARINE; MORTALITY by DROWNING in the MERCHANT SERVICE compared with that in the ROYAL NAVY	lvii-lviii
WILLS. Calendars of Grants of Probate and Administration kept at the General Register Office; Numbers and Values of Probates and Administrations	lviii-lix
EUROPEAN STATES. Marriage, Birth, and Death Rates; Area and Population of Europe	lix-lxii
MEAN AGE at DEATH of MEN and WOMEN MARRIED and UNMARRIED	lxiii-lxiv
METEOROLOGY; Remarks by James Glaisher, Esq., F.R.S.	lxv-lxvii
PRELIMINARY TABLES	lxix-cxxxv

ABSTRACTS:—

MARRIAGES Registered in England in each of the Registration Divisions and Counties, and Districts; distinguishing those according and those <i>not</i> according to the Rites of the Established Church; in each quarter of the year; and distinguishing also Persons married according to their conjugal Condition, Minority, and Signature of the Register by marks	2-25
AGES of Persons married, distinguishing those of Bachelors, Spinsters, Widowers, Widows	26-28

ABSTRACTS—*continued.*

PAGES

MARRIAGES, BIRTHS, and DEATHS Registered, and Excess of Births over Deaths, in each of the Divisions, Counties, and Districts; also BIRTHS and DEATHS and EXCESS of BIRTHS over DEATHS in each of the Sub-districts of England; distinguishing the Sexes and Illegitimate Births throughout	30-84
BIRTHS Registered in the DIVISIONS and COUNTIES (distinguishing Males and Females) in each of the Four Quarters	86-89
BIRTHS of Children born out of Wedlock Registered in the DIVISIONS and COUNTIES (distinguishing Males and Females) in each of the Four Quarters	90-93
DEATHS Registered in DIVISIONS and COUNTIES (distinguishing Males and Females) in each of the Four Quarters	94-97
DEATHS of Males and Females in Public Institutions	99-119
DEATHS of Males and Females at different AGES Registered in DIVISIONS, COUNTIES, and DISTRICTS	122-143
CAUSES of DEATH of Males and Females in ENGLAND at different Periods of Life	146-155
CAUSES of DEATH of Males and Females in LONDON at different Periods of Life	156-161
CAUSES of DEATH of Males and Females in ENGLAND, and in each of the DIVISIONS and COUNTIES	162-185
DEATHS from SEVERAL ZYMOTIC and OTHER CAUSES, and INQUEST CASES, in the DIVISIONS, COUNTIES, and DISTRICTS of ENGLAND	186-197
VIOLENT DEATHS in ENGLAND, distinguishing SEX and AGE	198-204
VIOLENT DEATHS in each of the ELEVEN DIVISIONS of ENGLAND, distinguishing SEX	205-211
DEATHS returned as having occurred from SUICIDE in ENGLAND, distinguishing SEX and AGE	212-213
DEATHS returned as having occurred from SUICIDE in each of the ELEVEN DIVISIONS of ENGLAND, distinguishing SEX	214, 215
DEATHS returned as having occurred from MURDER and INFANTICIDE in ENGLAND, distinguishing SEX and AGE	216, 217
DEATHS returned as having occurred from MURDER and INFANTICIDE in each of the ELEVEN DIVISIONS of ENGLAND, distinguishing SEX	218
DEATHS returned as having occurred from MANSLAUGHTER in ENGLAND, distinguishing SEX and AGE	219, 220
DEATHS returned as having occurred from MANSLAUGHTER in each of the ELEVEN DIVISIONS of ENGLAND, distinguishing SEX	221

APPENDIX.

LETTER TO THE REGISTRAR-GENERAL ON THE CAUSES OF DEATH IN ENGLAND, BY WILLIAM FARR, Esq., M.D., F.R.S. :—

CAUSES OF DEATH	225-236
(1) <i>Zymotic Diseases</i>	230, 231
(2) <i>Constitutional Diseases</i>	231
(3) <i>Local Diseases</i>	231-234
(4) <i>Developmental Diseases</i>	234
(5) <i>Violence</i>	234-236
TABLES	238-274

INDEX of DISTRICTS, SUB-DISTRICTS, and of certain TOWNS, referring to Numbers used in the several TABLES of ABSTRACTS	275-289
ALPHABETICAL INDEX to REPORT, TABLES, and APPENDIX	290-307

REPORT

TO

The Right Honourable GEORGE SCLATER-BOOTH, M.P.,
President of the Local Government Board, &c. &c.

General Register Office, Somerset House,
18th June 1877.

(1875.)

SIR,

BIRTHS, deaths, and marriages have been partially registered in the parishes of England since the days of Queen Elizabeth; and the names of the great mass of the people of all classes, ranks, and ages who have lived since that date have been inscribed in one or other of these national records. But many of the Church register books have perished. And through the development of religious varieties and other causes they every year grew more defective until the Legislature passed the Act which came into operation in 1837; and not only relieved many consciences, but provided a better machinery for the record, not indeed of important religious rites, but of the facts of birth, death, and marriage, with such particulars as might be of use not only in connexion with the history of families and with property, but with the social life and health of the nation. One notable column was added to the register, which has turned out to be of great importance. Inquests into violent and sudden deaths have been held for centuries in England; but now the opinions—the verdicts—of the medical men of England on the causes of all their patients' deaths are certified; and undoubtedly these recorded opinions have been already of great use, and will be of still further use to science in future times.* The Legislature of England has thus taken the lead in advancing the health of Europe.

I have given in the following pages some account of the improvements which have, after thirty-seven years experience, been made by the new Act in the system of registration. Emigration and immigration affect the population of England more perhaps than that of any other State in Europe; and I have discussed the subject at some length, particularly noticing the influx of returning emigrants which was first noticed in the last Census report, and accounts for a certain proportion of the 24,093,767 of people in England at the end of 1875, during which year the popu-

* The following passage occurs in the last work of Dr. E. A. Parkes, F.R.S., the author of the best work on Hygiene that has appeared in any country: "The attention now paid to public health is in a large degree owing to the careful collection of the statistics of births and deaths, and of the causes of death, which have been collected in England for the last thirty-eight years. It may truly be said indeed, that not only all Europe, but gradually the entire world, has been influenced by the work of the Registrar-General of England. We are now able to determine the limits of mortality and its causes with some precision, and are being led up to the consideration of the causes which bring about a too high death-rate." *Public Health, by the late E. A. Parkes, M.D., F.R.S., p. 61.*

lation increased by 297,695. The English emigrants were much less numerous than in the previous six years. The seasons made their influence felt; the winter was excessively severe, and the rainfalls of the summer flooded the lands, and raised the rainfall of the year above the average. The prices of bread were low, of meat high. Indeed, in the last 20 years the price of beef rose 50, of mutton 29 per cent. How much the cattle diseases and quarantine, interrupting the freedom of trade, have contributed to this result I do not discuss; but the scarcity or abundance of food affects the registers sensibly, and so does the state of trade, which was still depressed throughout the year; yet fewer outdoor paupers were relieved than in previous years. I have noticed at some length the facilities for marriage, which is a civil contract and is always registered in England; as we may trust will also be soon as effectually done in the other divisions of the United Kingdom. Three in four marriages are celebrated according to the rites of the Established Church; and I show that there the fashion of marrying by banns rather than by license has sensibly increased during recent years. The most important change is in the greater frequency of early marriages since civil registration was established; and this is discussed at some length. The spinsters married were on an average 24 years of age; and instead of 13 in 100, as in 1841-5, no less than 22 were under age (of 21). The effect of this important fact requires investigation. One of the most gratifying circumstances I report on is the diminution of the numbers both of men and women who sign the marriage registers with marks, thereby professing inability to write their own names. The proportion signing with marks in 1841 was 33 men, 49 women, out of 100; in the year 1875 the proportions fell to 17 and to 23. Thus in 30 years the proportion of ignorant husbands fell from 33 to 17; of ignorant wives from 49 to 23. The ranks of writers increased every year; those of women more rapidly than those of men; so that if the same rate of increase be maintained in the next as in the last 34 years nearly all the men and women who marry will be educated at least to this extent—they will be able to write their names. This consummation might no doubt be accelerated by adult evening schools. It is gratifying to find that the disparity between men and women is diminishing; and that in 22 years at the same rate of approximation as has prevailed for ten years the numbers of husbands and wives who write will be nearly equal. The buildings registered for public worship and for the celebration of marriages still increase. While the births went on at the average rate it is satisfactory to find that the proportion of children born out of wedlock decisively decreased. In the 10 years preceding *six* children were born out of, to a *hundred* born in—wedlock; in the year 1875 only *five* were born out of to 100 born in—wedlock. For 30 years the proportion of children born out of wedlock has progressively declined; it fell 30 per cent. Eleven years ago, out of a much smaller number of children born, 47,448 were bastards; in the year 1875 the number fell to 40,813; thus 6635 children have now fathers and mothers who instead of repudiating recognize their duties to their offspring. It is premature to attempt to assign the cause of the change; but I supply data which will assist the investigation. At the rate of illegitimacy that prevailed 30 years ago *seven*, at the present rate *five*, in every 100 of the people we meet would be illegitimate, if the mortality of this unfortunate class did not exceed the average; but that, as is well known, is far from being the case. I show that to 1000 infants born in 1875 no less than 158 died in the first year of life; then I find that, in certain selected districts, of 1000 infants born out of wedlock nearly double that number died in the same time. In some country districts the difference in the mortality is much greater; in Stratford-on-Avon out of 1000 of each class born 69 legitimate, 293 illegitimate children perish; in Kendal the proportions of the two classes are 91 and 329. I have given the assigned causes of infant deaths in Driffield and Preston where the mortality of the

children born out of wedlock is among the highest. The deaths in excess are not due to violence, but to the want, so well shown by Dr. Russell, of the mother's milk and care. The general result is that as the unfortunate children are cut down prematurely by thousands, the proportion surviving and going about in the population bear no sort of relation to the numbers born. The multiplication of the breed of men and women who abandon their children is checked by an inexorable law.

The relative mortality of men and women in the married and single state has not yet been determined in England on account of a slight imperfection in the death schedule which can easily be remedied. But it is shown for Scotland in a subsequent paper by Mr. F. J. Williams of this office that the unmarried men—after every correction has been made—do not live so long as married men. The mortality of the unmarried men as well as the mortality of children born out of wedlock is above the average.

I have exhibited in a series the mortality year by year in the urban districts in juxtaposition with the mortality of the rural districts, which will enable the inquirer to trace the relative fatality of disease in the two classes of population; thus, for 29 years the deaths in the town districts were to the deaths in the country districts as 25 to 20; but while in the first four years 1847–50 the deaths in the towns were to those in the country as 27 to 21, they were in the last five (1871–5) as 24 to 19. Then it is shown that the excess of the aggregate mortality in 1875 was due to the excess of the mortality of both males and females at the ages after the age of 35; the excess due to the cold weather increased rapidly as age advanced after that term.

The death registers serve the purpose of self-registering Inspection. Sometimes great sums are expended on works without any apparent results; time has not ripened their fruits; or they are left imperfect; pure water is supplied without sewers, or main drainage is created without branches to connect the great trunks with every dwelling; the dwellings remain sordid and crowded; sanitary regulation is neglected. All this is revealed by the death-rate. Death cannot be deceived by sham defences. I have therefore in the last and in this present Report given the mortality of several districts, with a summary view of the sanitary work achieved by sanitary organization.

The registers at the end of 1875 contained 54,078,314 names; 25,241,938 of children born, 12,298,886 of men and women married, and 16,537,490 of persons deceased at all ages. The birth registers are not quite complete as a certain number of births were never registered; but on account of the excess of births over deaths in an increasing population and emigration they exceeded the deaths; which again exceed the number of persons of both sexes married. The certified copies are at Somerset House; the original registers are in the several registration districts in the custody of the registrars and superintendent registrars who are empowered to grant certificates on the same terms as the central office. In addition to the large number of searches and certificates so granted, 25,407 *searches* were made in the year 1875 at Somerset House and 19,639 certificates were granted, for which 3879*l.* 15*s.* 6*d.* were duly handed over to Her Majesty's Exchequer.

I have given the births, deaths, and marriages for the United Kingdom; and the several rates which differ somewhat from the rates of England, chiefly in consequence of the defects of the marriage registers of Ireland and Scotland, where the registration of marriage is not enforced as it is in England. Dr. Burke the Registrar-General of Ireland has shown that the births in Ireland are depressed by the emigration of women at the child-bearing age, so that the low birth-rate of 26·1 per 1000 in Ireland to 35·5 in England, and to 35·4 in Scotland is not entirely due to defaults of the Irish registration officers. Dr. Burke points out how by more judicious arrangements the registration of deaths might be rendered more complete in Ireland; and we shall, no doubt, under his energetic adminis-

tration soon see the registration of marriages and births as complete in Ireland as it is in England. The defect of the records of the most important events in the lives of the people is remedied in France, Belgium, and Italy by recording every marriage as a civil act without interfering at all with the solemnities of religious ceremonial. In the meantime the English rates may be accepted as representing pretty accurately the corrected returns for the United Kingdom ; with which the returns I have procured from the most advanced states of Europe may be compared.

The members of the International Statistical Congress have undertaken to draw up under different categories a series of reports based on official returns from the different States. The first on the population of Europe has been issued by Dr. Berg the delegate for Sweden, and is worthy of that eminent statist and of his country which enjoys the renown of having taken the first Census in modern times—1751. Dr. Berg returns the population up to 1870 or 1872 ; and a careful estimate has been framed of the area and population of the several States in 1875 and 1876 by Herr Behm and Dr. Wagner. By this estimate the population of Italy expressed in millions is $27\frac{1}{2}$, England (U.K.) $33\frac{1}{2}$, France (1872) 36, Austro-Hungaria $37\frac{3}{4}$, Germany $42\frac{3}{4}$, Russia in Europe $73\frac{1}{2}$ millions. The population of the great States with their colonies and dependencies is, by the latest estimates : British empire 236 millions, Russian empire 87 millions, Turkish empire 48 millions, German empire 43 millions, France 42 millions, Austro-Hungaria 38 millions, Italy 27 millions. The area of the British empire is 20 million square kilometers, of the Russian empire 22 million square kilometers.

The same writers estimate the area and population of the world at 135 million square kilometers, 1424 million souls (10·6 persons to a square kilometer) ; but I can only cite without venturing to sanction these two estimates.

The population of the British empire and of the European States has been enumerated and can therefore be accepted. So I have given a detailed summary of the general results ; for if knowledge is power, if wealth is power, so population is in a certain sense power. Still it will be admitted that great as are the productive varieties of the surface unit, the varieties of the potential energy of the human unit are still greater. A man is everywhere a man, but in no two nations is he the same. I now proceed to discuss the several subjects more fully in detail.

Amendment of the Registration Act.—Since 1st of January 1875, the Act has been in force which amends the previous Statutes regulating Registration of Births and Deaths ; it *compels*, under a penalty, parents to record births, and nearest relatives to record deaths, in the civil register books.

This amending Act was considered necessary with a view to making more complete than formerly the record of births, and in the hope of obtaining increased accuracy with respect to each particular registered as to deaths.

Formerly many births annually escaped being recorded in the civil registers, more particularly illegitimate births in large towns. I am in hopes that this *compulsory* clause may reduce the number omitted, although I cannot report that the birth register is as yet quite complete.

With respect to deaths, very few escaped civil registration, and the chief defect was the want of accuracy in the information supplied for record by persons “ present at death,” and “ in attendance ” during fatal illness.

Many mistakes were consequently made as to the exact number of Christian names, the precise spelling of surnames, the age, the occupation of the deceased, and the cause of death ; occasioning necessarily much trouble to the Bank of England, insurance offices, friendly societies, clubs, &c., and to everybody who had occasion to use certificates of death.

Now it has become the duty of the “ nearest relatives,” in addition to burying the deceased, to record in the civil register, within five days after

death, the various particulars rendered necessary by Statute ; and thus it is to be hoped that the original entries will be correct, requiring no or few corrections—a change which I shall be glad to see, as alterations in registers are not to be encouraged.

This *compulsory* system, under penalties, imposes new duties on the public, and you, Sir, were anxious that these new duties should not be felt to be more grievous than necessary.

Accordingly the Statute makes it imperative that the registrar shall be at home at certain fixed hours on particular days in each succeeding week, and thus be accessible to informants, who, on repairing to his office at these times, which are announced and published, will be certain not to have made a useless journey, as they will be enabled at once to make the entry.

Moreover registrars have, in order to meet the convenience of the public, to attend at “stations” on fixed days in distant parts of their sub-districts, where the inhabitants may avail themselves of the opportunity of meeting the registrar in their own immediate neighbourhood.

Prompt registration quickly effected after the occurrence of a birth or death is gratuitous ; unless a householder prefers requiring the registrar to attend at his residence rather than go himself to the office ; in such a case he can make that arrangement on paying the small fee of one shilling.

When a death occurs the nearest relative is permitted to send “notice” of the event, accompanied with a medical certificate as to the fatal disease, to the registrar, and if the death is recorded within 14 days no penalty is incurred.

Formerly births could not be registered when more than six months had elapsed ; now, under special authority, they may be recorded even within seven years.

An arrangement has been made for registering births when parents, having omitted to perform that duty, have gone into a distant part of the country ; which is very convenient for the migratory portion of the community.

No name of a putative father can now be registered without his consent, and unless he himself sign the entry in conjunction with the mother.

Greater facilities are afforded for recording any name which, having been given after registration to an infant in baptism or otherwise, it is desirable to add to or to substitute for the name recorded in the first instance.

Coroners are required to transmit to registrars verdicts of juries, to be recorded in register of deaths, more promptly than formerly.

An infant cannot legally be buried as still-born without the production of a certificate or declaration ; which may be considered a very great improvement on the former loose system. I trust that the clergy and the cemetery authorities will strictly carry out this salutary law.

Registered medical practitioners are now required, under a penalty, to certify the causes of their patients' deaths, which are registered together with the names of the certifying practitioners. The number of uncertified deaths has already been greatly diminished under the new statute, and the inquiries which the registrars now make when no medical certificate is produced cannot but tend to strengthen the protection to human life which registration supplies.

Greater facilities are given for changing boundaries of districts.

Deputies must be nominated by all registration officers.

Offences against the Registration Acts may now be summarily brought under the notice of magistrates in petty sessions, whereas formerly in most cases of prosecution it was necessary to proceed by the expensive process of indictment at assizes ; consequently many escaped unpunished. When the offence is held to be serious, the delinquent may still be prosecuted by indictment.

Returns are to be made at a very cheap rate to sanitary authorities and school boards ; and so are certificates to friendly societies, as well as to

factory inspectors; and this, although convenient for the public, is not perhaps unnaturally felt to be a grievance by registration officers.

Persons registering births may now, on paying the small sum of 3*d.*, receive a statement recording name and date of birth, which, although not, perhaps, evidence in a court of law, may be useful in after days.

Parliament has sanctioned the payment to each registrar of 4*l.* 10*s.* annually, in addition to his former small emoluments, in acknowledgment of the trouble he takes, and has during many years gratuitously and cheerfully taken, in sending extra periodical returns to be made use of in the Weekly, Quarterly, and Annual Reports issued from this office.

An alteration has been made in the mode of correcting errors of fact and substance incurred in the registers; and the method is a great improvement upon the former system, which was much too lax.

Births and deaths at sea are recorded here more completely than before, and certified copies of the same are obtained by the public without difficulty.

Such are some of the new enactments, and it may be confidently expected that they will be found to be conducive to the public benefit.

Steps have been taken to make the provisions of the new Act generally known, and I am glad to state that it has not been found necessary to take proceedings to enforce the compulsory clauses, except in a few instances, where a breach of the law had been aggravated by the conduct of the offender.

Emigration from the United Kingdom.—Mr. Giffen, in his report on emigration from the United Kingdom in the year 1875,* directs attention to the nature of the original sources of information whence the emigration statistics are derived. It appears that the primary object for which certain powers and duties were originally imposed on the Emigration Commissioners by the Passenger Acts was not to furnish emigration statistics, but to regulate ships engaged in carrying certain classes of passengers to places out of Europe. Under these Acts the masters of such ships are required to deposit lists of their passengers with the officers of the Customs, and it is from these lists that the emigration returns are compiled. Ships carrying cabin passengers only are not compelled to furnish lists, though most do so. The returns do not, therefore, necessarily include all vessels carrying emigrants, although, as regards non-European countries, the number of emigrants may probably be considered as practically complete; more particularly since the year 1863, when cabin as well as steerage passengers were included in the returns. It is, however, doubtful in these days of increased facilities of communication whether the results thus derived (after excluding foreigners passing through this country on the way to their destination) represent, as they once did, the number of emigrants for *permanent settlement*.

Then the number of persons coming into this country from places out of Europe may be mentioned as another reason why the lists of passengers leaving the country in this way should not be accepted as the same thing as an account of emigrants for *permanent settlement*. Of late years an attempt has been made to keep an account of the number of persons coming into this country from places out of Europe, but these returns are incomplete, inasmuch as the captains of ships are only compelled to deliver up lists of steerage passengers, while ships having cabin passengers only are not compelled to deliver lists. An effort, however, is being made to obtain complete returns.

It is to be regretted that there is no record of the transfer of population, if any, to European countries.

The number of emigrants of British origin who left the United Kingdom in the year 1875, in all ships under the Passenger Acts, and in some ships not under the Acts, for places out of Europe, after adding a certain propor-

* See Mr. Giffen's Report on Emigration from the United Kingdom in 1875, pp. 3-8.

tion of the 1,787 emigrants whose birthplaces were not distinguished, was 142,112.

In proportion to population the number of emigrants of British origin since 1853 was,—

Period.		Proportion to 10,000 Population.
In the three years 1853-55	- - -	84
„ five years 1856-60	- - -	43
„ „ 1861-65	- - -	49
„ „ 1866-70	- - -	56
„ „ 1871-75	- - -	60

The approximate number of recorded *immigrants* in 1875 was 94,228, which if deducted from the corrected number of emigrants of British origin (142,112) leaves a balance of 47,884. A more correct result, however, would be obtained by deducting from the number of recorded *immigrants* those who were foreigners in transit to other countries.

Without making any correction for persons not distinguished who ought to be classed as British, the loss of population from the excess of emigration over immigration in the six years for which an approximate record of immigration has been kept was as follows :—

YEARS.	Emigration of Persons of British origin only.	Approximate Record of Immigration.	Excess of Emigration over Immigration.
1870 - -	202,511	49,157	153,354
1871 - -	192,751	53,827	138,924
1872 - -	210,494	70,181	140,313
1873 - -	228,345	86,416	141,929
1874 - -	197,272	118,129	79,143
1875 - -	140,675	94,228	46,447

So while emigration has declined during the two years 1874-5, it would appear that immigration continued to be well maintained. Probably “the” emigration lists now include a larger number of passengers who do not “go abroad for permanent settlement.”

Of the total number of emigrants, after distributing proportionally those whose birthplaces were not distinguished, 85,575 were English, 14,810 Scottish, and 41,727 Irish.

The annexed table shows the nationality of British emigrants during the last 13 years :—

YEARS.	Of British origin.				Foreigners.	Not dis- tinguished.	GENERAL TOTAL.
	English.	Scotch.	Irish.	TOTAL.			
1863	61,243	15,230	116,391	192,864	7,833	23,061	223,758
1864	56,618	15,035	115,428	187,081	16,942	4,877	208,900
1865	61,345	12,870	100,676	174,891	28,619	6,291	209,801
1866	58,856	12,307	98,890	170,053	26,691	8,138	204,882
1867	55,404	12,866	88,622	156,982	31,193	7,778	195,953
1868	58,268	14,954	64,965	138,187	51,956	6,182	196,325
1869	90,416	22,559	73,325	186,300	65,752	5,975	258,027
1870	105,293	22,935	74,283	202,511	48,396	6,033	256,940
1871	102,452	19,232	71,067	192,751	53,246	6,438	252,435
1872	118,190	19,541	72,763	210,494	79,023	5,696	295,213
1873	123,343	21,310	83,692	228,345	72,198	10,069	310,612
1874	116,490	20,286	60,496	197,272	38,465	5,277	241,014
1875	84,540	14,686	41,449	140,675	31,347	1,787	173,809

With reference to the nationality of emigrants of British origin in 1875, 60 per cent. were English, 10 per cent. were Scotch, and 30 per cent. were Irish.

The proportions of English and Irish emigrants have considerably altered during the last 22 years, the number of English emigrants having nearly doubled, while the number of Irish emigrants has fallen to about one half, so that the proportions have been almost exactly reversed.

PERIOD.	Of 100 Emigrants of British origin, the Number of each Nationality.		
	English.	Scotch.	Irish.
Three years 1853-55 - -	30	9	61
Five years 1856-60 - -	39	10	51
„ 1861-65 - -	33	9	58
„ 1866-70 - -	43	10	47
„ 1871-75 - -	56	10	34

The returns relating to destination of emigrants of British origin in 1875, without any correction for those whose nationality was not stated, show that the number who went to the United States and to the North American Colonies was 41,003 less than in the previous year; this is a large decrease, especially since the decrease in 1874 amounted to 61,273. There was also a large falling off in the emigration to Australasia from 52,581 to 34,750, or of 17,831. To all other places there has been an increase for some years.

The subjoined table shows the results, at different periods, for emigrants of British origin without any correction for those whose nationality was not distinguished:—

PERIOD.	TO UNITED STATES.		TO BRITISH NORTH AMERICA.		TO AUSTRALASIA.		TO ALL OTHER PLACES.		TOTAL.
	Number.	Per-centage of Total.	Number.	Per-centage of Total.	Number.	Per-centage of Total.	Number.	Per-centage of Total.	
Three years 1853-55	430,818	62	83,568	12	179,628	26	1,185	—	695,199
Five years 1856-60	374,778	61	39,840	6	185,679	30	17,187	3	617,484
„ 1861-65	466,042	65	47,741	7	186,338	26	17,675	2	717,796
„ 1866-70	666,584	78	82,569	9	81,020	9	23,860	4	854,033
„ 1871-75	674,267	69	111,415	12	139,411	14	44,444	5	969,537
1875 - -	81,193	57	12,306	9	34,750	25	12,426	9	140,675

So the largest outflow of emigration was to the United States, while the immigration records prove that it was from that country that there was the largest influx into the United Kingdom.

—	From the United States.	From British North America.	From Australasia.	From all other Places.	TOTAL.
1873 -	68,536	5,862	2,574	9,444	86,416
1874 -	100,527	7,791	1,892	7,919	118,129
1875 -	80,045	6,577	2,108	5,498	94,228

By the preceding tables it will be observed that the influx of immigrants from the United States was nearly equal to the outflow of emigrants to that country.

Mr. Giffen points out that the proportion going to America is highest in years of large emigration, and "that the numbers of so-called emigrants who have lately gone to America for permanent settlement have been comparatively few, or their place here has been taken by emigrants of an older date or native-born Americans coming to this country. The high figures of emigration to the United States in certain years are therefore less than ever a sure indication of an emigration for *permanent settlement*."

The number of foreigners, after adding a due proportion of those whose nationality was not distinguished, passing through the United Kingdom to their destination in 1875 was 31,697, against 39,532 in 1874, and 74,630 in 1873.

Increase of Population.—The growth of the population in England and Wales during the year 1875, through the excess of births over deaths, was 304,154, and as the registration of births under the new Act is now compulsory, the result thus obtained may be taken to represent a close approximation to the correct natural increase.

The record of the number of immigrants kept by the Board of Trade for recent years, previously referred to, affords the means of making some estimate of the *net* loss to the population of the United Kingdom through the excess of emigration over immigration. This in 1875 was 46,447, and probably about three-fourths of this may be taken to represent the proportion for England and Wales = 34,835.

Deducting, therefore, this *net* loss from the natural increase of population the result is 269,319, but the estimated population of England and Wales on January 1st, 1876, based on the actual rate of increase during the 30 years 1841–71 was 24,093,767, showing an increase of 297,695 over the estimated population on 1st January 1875 (23,796,072); if, however, the records of emigration and immigration were complete* for England and Wales, these two results would approximate more closely.

I will proceed to notice a few of the factors which are found to have an influence on the Births, Deaths, and Marriages.

Meteorology.—The winter of 1875 was one of unusual severity. The most remarkable meteorological phenomena of the year were the floods in July and October, and the severe cold in February, in March, and in the four weeks from 20th November to 16th December. During this latter period the weather was bitterly cold, the average daily deficiency of temperature being $7\frac{1}{2}^{\circ}$; from 30th November to 7th December it was 12° , but on the 4th and 5th December the deficiency was as great as $14\frac{1}{2}^{\circ}$.

The rainfall in July was excessive, 5·3 inches, being 2·7 inches above the average. Since the year 1815 there have been only four Julys with such large rainfalls. Between the 13th and 23rd of July the falls were so heavy as to cause floods of great violence. In the counties of Monmouth and Glamorgan the rainfall measured from 3 to 5 inches, and in the counties of Hereford and Gloucester it measured from 1 to 3 inches. The rainfall in the three months of July, August, and September was 10·3 inches, or 2·9 inches above the average. The total fall for the year was 28·2 inches, being 3 inches above the average of 61 years.

* The number of immigrants should include Germans and others coming into this country to settle for terms of years. In 1861, 28,644 Germans were enumerated in England, the number in 1871 was 32,823, showing an increase of 4,179. In 1861, 12,989 natives of France were enumerated, in 1871 the number was 17,906, or 4,917 more. In 1861, 3,616 Poles were enumerated, in 1871 the number was 7,056, or 3,440 more.

Although the above remarks refer to observations made “about London,” Mr. Glaisher states that they apply generally to the whole country.

The meteorology of this year, 1875, is fully described by Mr. Glaisher, F.R.S., in his remarks on pp. lxxv–vii, who also shows in his tables the meteorological variations at different places. See pp. cx–xiii.

Prices.—The year 1874 was one of commercial difficulties, failures, and fall of prices, but the depression which marked the year 1875 was still more severe, especially in the iron, coal, hardware, and ship-building trades, which were constantly agitated by strikes between employers and men. These, however, have resulted in better work being now obtainable at lower wages.

Foremost among the general causes of the commercial suffering of the last two years and a half may be mentioned the Franco-German war in 1870–1, the payment in 1871–3 by France to Germany of the indemnity of 220 millions; the American railway panic in 1873; and the repudiation by Turkey, in October 1875, of part of its obligations; so, as regards its commercial and financial history, 1875 has been a bad year for Europe and America. The year was also memorable for the fall in the price of silver.

The price of meat continued high, beef being slightly dearer than it was in 1874, while the price of mutton was much higher; and it is to be feared, unless foreign competition on a very large scale is brought to bear on the market, that the present high price of meat will continue.

The average wholesale price of beef at the Metropolitan meat market in each of the two years 1874 and 1875 was $6\frac{5}{8}d.$ and $6\frac{7}{8}d.$ per lb. respectively; of mutton $6\frac{4}{8}d.$ and $7\frac{3}{8}d.$ per lb.

During the last seven years, 1869–75, a large advance has been made in the price of animal food. The average price of beef was 18 per cent., and that of mutton 12 per cent., higher in the seven years 1869–75 than the respective average prices in the previous seven years (1862–68).

A table of average prices* affords the means of tracing the rise in the price of food for 24 years. Comparing the prices of beef and mutton in the two years 1852–53 with those in the two years 1874–75, there is an increase in the price of beef of 50 per cent., and in that of mutton of 29 per cent.

INCREASE per Cent. in the PRICE of BEEF and MUTTON, 1852–3 and 1874–5.

PERIODS.	Beef, per lb.	Mutton, per lb.
	Pence.	Pence.
1852–3 - -	$4\frac{1}{2}$	$5\frac{3}{8}$
1874–5 - -	$6\frac{3}{4}$	$6\frac{15}{16}$
Increase per cent. -	50	29

It is a question for the public to solve whether the present high prices of meat retailed at the butchers' shops is excessive, or whether they bear a just proportion to the wholesale prices at Smithfield.

Bread was cheap, for the price of wheat was low; it fell from 55s. 9d. per quarter in 1874 to 45s. 2d. per quarter in 1875, showing a decrease of 19 per cent. The quotation was lower than in any year since 1865.

* See Table 34, p. cii.

The prices of potatoes averaged 99s. 6d. per ton, which was 10 per cent. lower than in 1874, and considerably lower than in 1873, when the mean price was 159s. per ton.

Pauperism.—During the year 1875 pauperism continued to decrease. The average number of paupers relieved, on the last day of each week, in each of the years 1874 and 1875, was in-door, 137,197 and 135,041, out-door, 609,328 and 579,169, showing a decrease in the number of in-door paupers relieved of 1·57 per cent., and of out-door paupers relieved of 4·95 per cent. This decrease is believed to be chiefly due to improvements in the administration of relief.

The annexed statement shows the results of five Censuses of paupers on the 31st December 1871–5 exclusive of lunatics in asylums and vagrants:—

	NUMBERS.			PROPORTION TO 10,000 OF POPULATION.		
	In-door.	Out-door.	Total.	In-door.	Out-door.	Total.
1871 - -	150,093	780,809	930,902	66	343	409
1872 - -	147,657	690,979	838,636	64	300	364
1873 - -	144,201	637,269	781,470	62	273	335
1874 - -	146,947	603,468	750,415	62	255	317
1875 - -	144,313	557,604	701,917	60	233	293

The decrease from 1874 to 1875 was 48,498, or 6·5 per cent.

In 1871 there were 409 paupers in receipt of relief to every 10,000 of population, whereas in 1875 the proportional number was only 293. Nearly the whole of this reduction occurred under the head of out-door relief.

MARRIAGES.

Marriage by civil contract has been in force in England and Wales during the last 40 years; and since 1841 nearly 800,000 persons have been married in register offices, out of which number more than 400,000 have been married during the last 11 years.

Attempts are sometimes made to persuade persons who have been duly married in accordance with all the legal forms at the register office, that such marriages are *improper*, and that the parties should not live together as man and wife until a religious ceremony according to the rites of the Established Church has been gone through.

I consider this to be most mischievous, tending as it does to disturb and unsettle the minds of hundreds of thousands of persons who, availing themselves of the privilege granted by the Legislature in 1837, have been validly married in the register offices.

It is to be regretted that any clergyman of the Established Church should be found to tell his parishioners, married according to the law of the land, that they are not properly married, as that implies that they are living in a state of fornication, and that their children are illegitimate. And as the civil is the only legal form of marriage in several great Christian states, the assertion that it is “only suited to infidels” is still more to be regretted.

In marriages by civil contract such precautions are taken against clandestine marriages, that it is much easier to obtain their celebration according to the rites and ceremonies of the Established Church in populous parishes in large towns, than it is in register offices.

For it is well known that the banns of 99 couples have been published in the church of St. Pancras, of 125 couples in St. Mary's, Lambeth, of 202 couples in the Cathedral Church of Manchester on one Sunday; in many

cases the names merely being mentioned, unaccompanied with any announcement of condition, whether bachelor, widow, &c. ; and in many cases no searching inquiry having been made as to previous actual residence in the parish, or as to consent of parents in case of minors. Nor is the banns book accessible and open to the public. Thus facilities are given to clandestine marriages by banns in large towns.

But before marriages by civil contract can be celebrated, the following safeguards have been wisely established.

1st. A written notice must be given on a form prescribed by Statute, accompanied by a solemn declaration as to the several particulars enumerated in the schedule of the Act, the declaration being attested by a registration officer. If this is false in any particular, the party convicted suffers the pains and penalties of perjury, of which he has due notice in the words of the solemn declaration to which his attention is invariably called before he affixes his signature thereto.

2nd. The notice is entered by the Superintendent Registrar in the Marriage Notice Book, and is exhibited in the register office of the district, always accessible to the public, who have liberty to search and examine it, during three weeks after the entry is made ; and the issue of the Superintendent Registrar's certificate authorizing the marriage in the register office may be *forbidden*, or a caveat may be entered, which in the interim stays all proceedings.

Every exertion is made, in the case of proposed marriages of minors, to ascertain, either personally or by evidence in writing, that the consent of parents or guardians is given.

After 21 days, the issue of the certificate not being *forbidden*, and no caveat having been entered, in ordinary circumstances the certificate authorizing the marriage is granted, and the marriage is celebrated between the hours of 8 and 12, with open doors, in the presence of the Superintendent Registrar and the Registrar of Marriages, and the register is signed by the persons married, by two witnesses, by the Superintendent Registrar, and by the Registrar of Marriages.

Persons giving notice to Superintendent Registrars of marriage without license, cannot be married earlier than on the 23rd day ; whereas by banns they may be married a week sooner, or on the 16th day.

With respect to marriage by license in a register office, the same precautionary forms are gone through ; previous usual residence of one party in the district being necessary, and an entire day intervening between entry of notice and issue of license, affording an opportunity to parents and guardians and relations to *forbid* the marriage, or to enter a caveat, which immediately stops all proceedings.

But with respect to marriages by license in the Established Church no interval, during which inquiry may be made by parents or guardians or relatives, is necessary between the application for the granting of a license and the solemnization of the marriage ; a clergyman holding the office of surrogate, after administering to one of the parties to be married the oath that there is no legal impediment, may grant a license for a marriage in his own church, which he himself may in a few minutes be called upon to celebrate.

Some years ago two persons called at a church in London at 10.30 A.M., requiring to be married immediately, but producing no license ; they were told at the church that by going to Doctor's Commons they might obtain a license and be married that morning. They went accordingly, returned with the license, and were married before 12 o'clock that same day.

Superintendent Registrars are well qualified for the execution of the duties entrusted to them by Parliament, usually being solicitors and clerks to Boards of Guardians. The qualifications of registrars of marriages are investigated previous to appointment ; and registration officers can be dismissed for misconduct by order of the Registrar-General.

If the law respecting civil marriage is violated by registration officers, they are liable to severe penalties—such as are inflicted for felony. They are visited by inspectors of registration, who make weekly reports as to the mode in which their duties are performed; and when deficiencies are manifest, either from inattention, incapacity, or old age, efficient successors are nominated, regulations strictly defining their duties being printed for their use, as approved by superior authority.

Marriages in register offices are sometimes discouraged by Superintendent Registrars, as occasioning them considerable trouble and responsibility, for which they are not entitled to any fee.

It is stated by scripture readers and others that there is an advantage in persons having the opportunity of being married in register offices, as couples living in fornication, who would dislike the publicity of banns, and be ashamed to go before ministers of religion, are often persuaded by them to be married there privately.

Instances occur where clandestine marriages are apprehended as likely to take place; now if they are likely to be contracted by the civil act, notices must be given to Superintendent Registrars, and in London relatives need only go to 29 register offices for the purpose of searching the notice books and ascertaining what is intended; whereas to visit nearly 500 churches and chapels in London in which marriages may be solemnized by banns according to the rites of the Established Church, or to inspect the banns books, is impracticable.

Hitherto I have referred only to marriages in register offices; but the same Statute by which they were established, passed in 1836 during Lord Melbourne's Administration, brought long-desired relief to Nonconformists and Roman Catholics, who since that date have been permitted to marry in their own churches and chapels.

It will now be scarcely credited that from 1754 to 1837, during 83 years, persons of all creeds, if they wished to marry, were compelled to go through the ceremony according to the rites of the Established Church.

The complaints of a very considerable portion of the reflecting, intelligent, and influential population of the country, who were Protestant and Catholic Dissenters from that church, had for a long time been loud and general, and they earnestly contended that the remaining fragments of religious intolerance should be removed, deplored and condemned as they were by Parliament and the country.

How highly this privilege has been appreciated the following figures will show; in the chapels of Roman Catholics and of other Christian denominations since 1841, nearly 1,400,000 persons have been married, out of whom more than 600,000 have been married during the last 11 years.

With respect to these marriages the same regulations are adhered to as have been described under marriages in register offices; and I am not aware of any change that is required, except perhaps that arrangements should be made for giving greater publicity to notices of marriage intended to be celebrated after issue of certificate by Superintendent Registrar.

The civil form of marriage, by enabling persons to dispense with the intervention of ecclesiastical and religious authority, has also proved to be of great convenience in the case of "mixed marriages"—that is, where the parties to be married are of different religious creeds or professions. By resorting to a civil marriage, a valid celebration is accomplished without violence to the feelings or susceptibilities of the parties and their friends in the matter of religion. To foreigners it is also an advantage to be able to contract marriage in this country in the civil form, especially in the case of the subjects of foreign states whose laws require that marriages in order to be valid must be contracted before a civil authority.

Many marriages of the above description are celebrated in the district register offices.

I hope it may be considered that during the last 40 years the law of civil marriage has been fairly administered; every proper facility being given to those who seek to avail themselves of its advantages, and every safeguard being employed against any endeavours to make a wrong use of it, by either clandestine marriages or the abduction of minors without consent of parents or guardians.

In my last Report allusion was made to the commercial distress which prevailed in England in the year 1874, and attention was directed to the consequent diminution in the number of marriages.

The year 1875 witnessed an increase of the depression and difficulties of 1874, and this was also expressed in the marriage returns, for only 402,424 persons married, against 404,020 in the previous year.

Years.	Persons married to 1000 persons living.			
1866	-	-	-	17·5
1867	-	-	-	16·5
1868	-	-	-	16·1
1869	-	-	-	15·9
1870	-	-	-	16·1
1871	-	-	-	16·7
1872	-	-	-	17·5
1873	-	-	-	17·6
1874	-	-	-	17·1
1875	-	-	-	16·8

The marriage-rate (persons married to 1000 population) in 1875 was 16·8, nearly the same as the mean (16·9) of the ten years 1865-74, but the rates fluctuated considerably, industrial success or adversity being the most appreciable cause; the high rate of 1866 was followed by five years of depression, which were again succeeded by a period of increased prosperity, the decade (1866-75) closing with two unsatisfactory years to the industrial classes, and a comparatively low marriage-rate, but still, higher than any of the rates in 1867-71.

In the counties of Northampton, Essex, Stafford, Warwick, Leicester, Nottingham, Derby, Lancaster, Northumberland, Cumberland; in the East and North Ridings of York; and in Wales the marriages were above the average.

Taking the rate in all England and Wales as a standard, and measuring the rates in the different counties by that, it appears that the marriage-rate was highest, in 1875, in the counties containing the great manufacturing and commercial industries of the country, thus in Northumberland it was 20·3, in Lancashire 19·8, East Riding of York 19·6, Nottinghamshire 19·2, West Riding of York 18·4, Stafford 17·9, Leicester 17·9, Durham 17·9, Warwick 17·5, Gloucester 16·9, North Riding of York and South Wales 16·9; while in the remaining counties the marriage-rate was below the average for England and Wales (16·8), ranging from 16·7 in Derbyshire to 11·2 in Herefordshire, and 10·7 in the extra-metropolitan part of Middlesex.

Forms of Marriage.—149,685 of the marriages were celebrated according to the rites of the Establishment, and 51,527 otherwise, so the proportion who married according to the rites of the Church was 74 per cent., or three in four.

Of the marriages according to the rites of the Established Church 28 were by special license, 17,416 by license, 127,762 after banns, and 3632

by Superintendent Registrar's certificate. In conformity with section 31 of 6 & 7 Will. IV., cap. 86., the clergy are required to register the several particulars of a marriage according to the form prescribed in Schedule C., stating whether the marriage was by license, after banns, or by Superintendent Registrar's certificate; but in the year 1875 a few of the clergy omitted, in 847 instances, to act in conformity with the example given in the schedule, so that in 6 in every 1000 marriages according to the rites of the Established Church, it was not stated under which of the foregoing heads the marriages should be recorded.

In the year 1875 the returns were most imperfect in the Eastern counties, where the proportional number was 16 per 1000; in the South-western counties it was 15 per 1000. In the South-eastern and South Midland counties the proportions were 11 and 10 per 1000. The proportional number of imperfect returns was lowest in London, and in the North-western counties, where it was about 1 per 1000.

It is, however, satisfactory to note a great improvement in these returns during the last 35 years. Thus the proportional number of imperfect returns was 171 per 1000 in 1841, 80 in 1851, 27 in 1861, 11 in 1871, and 6 in 1875.

To every 1000 marriages according to the rites of the Established Church the number of cases in which the words "by license," "by banns," or "by Superintendent Registrar's certificate" were omitted was:—

Years.		Mean Annual Number.			
In the five years	1841-45	-	-	-	159
"	" 1846-50	-	-	-	122
"	" 1851-55	-	-	-	41
"	" 1856-60	-	-	-	29
"	" 1861-65	-	-	-	25
"	" 1866-70	-	-	-	20
"	" 1871-75	-	-	-	7

The number of marriages in the registered places of Roman Catholics fluctuated from year to year; taking an average of ten years, 1856-65, the annual number celebrated was 7771; in the ten years, 1866-75, it was 7985. The number solemnized in 1875 was 8411, against 8179 in the previous year, but the highest number recorded was 8911 in 1866. In the registered places of other Christian denominations not of the Established Church, 21,562 marriages were celebrated in 1875, about the same number (21,002) as were contracted in the offices of Superintendent Registrars without the performance of any religious rite.

The number of Quakers married in 1875 was 60, which was near the average annual number in the ten years 1866-75.

The marriages of Jews are increasing; the numbers in the registers of 1861 and 1866 were 262 and 301, and the numbers in the three years, of which 1875 was the last, were 484, 456, and 492.

Of 100 couples who married in 1875 according to the rites of the Established Church .02 married by special license, 11.63 by license, 85.35 after banns, and 2.43 by Superintendent Registrar's certificate, while in .57 per cent. it was omitted to be stated under which heads the marriages should be classed. Of 100 weddings not according to the rites of the Established Church there were 16.32 in Roman Catholic chapels, 41.85 in registered places belonging to various other Christian denominations, .12 among Quakers, .95 among Jews, and 40.76 at Superintendent Registrars' Offices.

First Marriages; Re-marriages.—402,424 persons were married in 1875. Of the men, 172,847 were bachelors, and 28,365 were widowers. 163,727 of the bachelors married spinsters, while 9120 married widows. 17,011 of the widowers who re-married chose spinsters, and 11,354 selected widows.

Of the women, 180,738 were spinsters, and 20,474 were widows; 163,727 of the spinsters wedded bachelors, and 17,011 widowers. 9120 of the widows married bachelors, and 11,354 widowers.

The number of persons who re-married was 48,839. The proportional numbers of widowers and widows who re-married, to every 100 marriages, in 1875, were 14.1 and 10.2 respectively.

The number of marriages of divorced persons in 1875 was 69, or 8 more than in the previous year. Of 37 divorced men who re-married, 31 married spinsters, and 6 married widows. Of 32 divorced women who re-married, 22 were married to bachelors, and 10 were married to widowers.

Ages at Marriage.—Of the 201,212 marriages registered in 1875, the ages of *both* parties were stated in 153,461 instances only, so that in 47,751 cases the officiating minister, or Registrar of marriages, returned the words “of full age,” “minor,” or “under age,” as the case might be.

In my last annual report I drew attention to the gradual improvement that had taken place in the marriage registers in this respect during the 20 years 1855–74; and although those returns are imperfect to the extent of nearly 25 per cent., still it is satisfactory to note that an improvement is observed in the returns for the year 1875, when the ages of both parties were not returned in 23.7 per cent. of the total marriages, whereas in the previous year the proportional number of imperfect returns was 25.8 per cent. The returns are most imperfect in London.

The mean age at marriage as determined from the 306,922 men and women whose ages were stated in the year 1875, including the re-married, was 27.9 years for men, and 25.8 years for women. For 133,680 bachelors it was 25.7 years, and for 138,639 spinsters 24.3 years. The mean age of the widowers who married was 43.0 years, and of widows 39.4 years. These results are almost exactly the same as those for the previous year. 16,730 males and 44,764 females married in 1875 under 21 years of age; so to every 100 males married 8.31 were under age, and to every 100 females married 22.25 were under age. These marriages of minors—which for many reasons are to be regretted—are increasing in England, as will be seen by the annexed results.

PERIODS of Five Years.	To every 100 Marriages the annual proportion under 21 Years of Age.	
	Males.	Females.
1841–45	4.38	13.33
1846–50	4.48	14.23
1851–55	5.45	17.28
1856–60	5.94	18.65
1861–65	6.55	19.87
1866–70	7.08	20.84
1871–75	8.15	22.22

The counties having the highest proportions per cent. in 1875—of men, were Nottingham 14.8, Stafford 14.0, Bedford 13.5, Leicester 13.5, Derby 13.1, Northampton 11.4, and West Riding of York 11.2;—of women, Durham 34.0, Stafford 32.4, Derby 31.2, Nottingham 30.1, York 27.0, Monmouth 26.1, Leicester 26.0, Northumberland 24.1, and Cambridge 24.1.

The lowest proportions per cent.—of men, were in the counties of Salop 3.9, Hereford 4.3, Hants 4.4; in the counties comprising North Wales 4.6; in Cumberland 5.0, and in Westmorland 5.5:—of women,

the lowest proportions were in the counties included in North Wales 13·1, and in the counties of Salop 13·4, Dorset 14·7, Devon 15·0, Hereford 15·6, Berks 16·2, Westmorland 16·7, and Sussex 17·1.

The increasing tendency to early marriage is more accurately indicated by the proportion of men and women who marry under 21 years of age to the numbers living. Thus to 1000 men and 1000 women living of the ages 17–21, the average annual numbers of minors who married in the 10 years 1846–55 were 10·64, and 33·47, whereas in the 10 years 1866–75 the respective proportional numbers were 17·05 and 47·09, so in these 20 years marriages of minors increased 60 per cent. among men, and 41 per cent. among women.

Signature in Marriage Registers.—Although the proportion of men and women who signed the marriage register with marks, instead of writing their names, is steadily decreasing in England and Wales, it is to be regretted that such a comparatively large number as 34,660 men and 46,666 women were unable to affix their names to that record in the year 1875. The proportions to every 100 marriages were 17·2 for men, and 23·2 for women, against 17·9 and 24·2 respectively, in the previous year.

The gradual improvement that has taken place during the seven quinquennials of the last 35 years is shown in the subjoined table :—

PERIODS of Five Years.	To every 100 Marriages the annual proportion who signed the Marriage Register with MARKS.		Quinquennial Decrease in the proportions who signed with MARKS.	
	Men.	Women.	Men.	Women.
1841–45	32·6	48·9	1·2	2·7
1846–50	31·4	46·2	1·2	2·7
1851–55	30·2	43·5	3·1	5·4
1856–60	27·1	38·1	3·5	5·2
1861–65	23·6	32·9	3·1	4·6
1866–70	20·5	28·3	2·0	3·1
1871–75	18·5	25·2	—	—
Decrease in the 35 years 1841–75			15·5	25·6

If instruction increase in future years at the same arithmetical rate as it has in the years 1841–75, then all the men will be able to write in 38 years, and the women in 31 years.

The value of such results for purposes of comparison has long been acknowledged, and testing the state of elementary education in the different portions of the United Kingdom by them it appears, from recent returns, that while, among Scotchmen, the proportional number

—	Years.	To every 100 Marriages the proportion who signed the Marriage Register with MARKS.	
		Men.	Women.
ENGLAND AND WALES - -	1875	17·2	23·2
SCOTLAND - - - -	1872	10·4	20·5
IRELAND - - - -	1875	30·3	36·7

unable to write was only 10 per cent., and among Englishmen 17 per cent., among Irishmen the proportion was as high as 30 per cent.

Among Scotchwomen the proportion unable to write was 21 per cent., among Englishwomen it was 23 per cent., while among Irishwomen the proportion was 37 per cent.

The great disproportion, which the above results disclose, between the elementary national education of *men* and *women*, in Scotland, is remarkable; there, 1 man to every 2 women was unable to write, while the ratio in England was about 3 males to every 4 females. In Ireland the men were nearly as badly educated as the women, those signing with marks being in the proportion of 5 men to every 6 women.

Although the English counties containing the greatest proportional number of Irish do not, as a rule, show the least proficiency—as will be seen by the subjoined results,—still as the Census returns show that the proportional number of Irish enumerated in 1871 is much greater in some counties than in others, this element may be taken into account in reviewing the progress of elementary education in different counties as indicated by the numbers who sign the marriage register with marks.

The proportions of men and women who signed with marks were slightly higher in some Counties, in 1875, than they were in the previous year; this is perhaps due to increased prosperity of the labouring classes of the population, inducing them to marry in greater numbers.

Among men, the highest proportions per cent. in 1875, showing the least proficiency, were in the counties of Stafford 30·0, Monmouth 27·1, Hertford 27·0, Bedford 25·8, Suffolk 25·7, Buckingham 25·4, Cambridge 25·0, Norfolk 24·8, Salop 24·8, North Wales 24·7, Huntingdon 23·9, South Wales 23·5, Cornwall 21·9, Worcester 21·5, Durham 21·3, Warwick 20·9, and Essex 20·0.

The lowest proportions per cent. of men who signed with marks were in the counties of Westmorland 8·5, London 8·7, Rutland 10·8, Hants 11·7, Northumberland 12·0, East Riding of York 13·4, Devon 13·4, Cumberland 14·5, and Sussex 14·6.

The education of women is much neglected in the large manufacturing and mining towns. In the county of Stafford, out of every 100 marriages, the proportion per cent. of women who were unable to write their names was as high as 36·8. In South Wales it was 36·2, in the Counties of Lancaster 33·9, North Wales 33·3, Monmouth 31·4, Durham 30·9, West Riding of York 30·6, Chester 26·5, Warwick 26·3, Nottingham 26·2, Salop 25·5, and Worcester 25·0.

The women of Westmorland are as well educated as the men, where the proportion per cent. unable to write was only 8·5, in Sussex it was 9·5, then follow the Counties of Rutland 10·1, Hants 11·2, Berks 12·0, Lincoln 14·2, Oxford 14·2, Dorset 14·8, and Hereford 15·0, Essex 15·1, Wilts 15·3, Devon 16·6, Gloucester 16·7, Cambridge 16·9, Somerset 17·5, Northampton 18·1, and Suffolk 19·4. It is noteworthy that the women are generally better educated in the agricultural counties than the men.

It will be interesting to trace the results of the measures that have been adopted in recent years to supply the educational deficiencies of the children of the lower classes of the community in the future marriage registers of the nation.

The number of elementary day schools visited by the inspectors for the purpose of annual grants, during the twelve months ending 31st August 1875 was 13,217, affording accommodation for 3,146,424 scholars.* The names of 2,744,300 scholars were entered on the school registers, but only 2,221,745 were present on the day of inspection, while the daily average attendance was 1,837,180, so 42 per cent. of the accommodation provided was not utilized.

The provision for accommodation of scholars, in the year 1869, was only 8·3 per cent. of the whole population; in 1875 the proportion had increased to 13·1 per cent.; additional accommodation having been provided in the six years 1869-75 for 1,380,480 children.

The provisions of the Elementary Education Act of 1876, in operation since 1st January 1877, will, it is hoped, insure the attendance of the majority of the three millions and a quarter of children, who, it is estimated, ought to be receiving daily instruction in efficient schools.

850 schools were inspected, in addition to the above, but they did not fulfil the conditions on which annual grants are made: the number of scholars present on the day of inspection in these schools was 51,976.

In 1392 night schools the average nightly attendance was 48,392.

Buildings registered for Marriages.—The number of these buildings registered in 1875 was 220, bringing up the total number on the register at the end of the year to 7595. Of the 220 registered during the year 2 belonged to Presbyterians, 21 to Independents, 34 to Baptists, 25 to Roman Catholics, 8 to Unitarians, 108 to the various sects of Wesleyan

* See Report of the Committee of Council on Education, 1875-6, pp. vii-xi.

Methodists, 12 to Calvinistic Methodists, 2 to the Catholic and Apostolic Church, and 8 to other religious denominations.

Certified Places of Worship.—The number of buildings certified for religious worship during the year 1875 not being churches or chapels of the Established Church was 534. The number on the register on 31st December 1875 was 20,480. The following is a list of the various titles by which religious denominations have been certified to the Registrar General. The names printed in italics have been added since the publication of the list in my last Report.

BIRTHS.

It is a fact that the number of births registered was greater in 1874 than in the year 1875 when the provisions of the Births and Deaths Registration Act first came into operation, rendering it obligatory under a penalty to register births, but this may be owing to delay in registration, as, under the new Act, the time which is allowed to expire, between the birth and the registry, has been considerably extended.* Indeed a reference (at the date of writing this report) to the number of births registered in the first part of the year 1876, appears to confirm this assumption, the number being considerably above the average.

The time during which the registry of a birth might be effected, *without expense*, was six weeks under the old Act; this has now been extended to three months, after which a small fee is exacted for registration. Previously to the passing of the new Act, the limit of time for registering a birth was

* In France under the regulations of the Code Napoleon a child must be presented to the Registrar within three days of its birth.—*See Code Civil, Liv. I. Cap. II. Des Actes de Naissance, sec. 55.*

six months, now it is twelve months, and in special cases the Registrar-General can authorize registration after that time.

The number of births registered in 1875 was 850,607, or 4349 less than in the previous year.

Years.						Births to 1000 Persons living.
1871	-	-	-	-	-	35·0
1872	-	-	-	-	-	35·8
1873	-	-	-	-	-	35·5
1874	-	-	-	-	-	36·2
1875	-	-	-	-	-	35·5

The birth-rate was 35·5, which was nearly the same as the average in the 10 years 1866-75, but ·7 below the rate in 1874.

The counties with the highest birth-rates, have—according to the census returns of 1871—the greatest proportion of married women aged 15-45. Thus of every 100 women of these ages in England and Wales, 50 per cent. were married; while in Durham the proportion was as high as 60 per cent., and in Stafford 56 per cent.; in Dorset and Devon the proportions were only 47 and 45 per cent. respectively.

The results in Table B., p. xxvi, seem to imply that a sudden and remarkable migration of married women of the childbearing ages has taken place during the last two or three years from the agricultural districts to the counties containing the great mining and manufacturing industries of the country.

Sex.—The proportion of boys born to 1000 girls has decreased within the last 35 years in each of the quinquennials from 1,052 in 1841-5 to 1,039 in 1871-5.

Still-born children.—In the case of children born alive—or who breathe—both the birth and death are registered, but still-born children are not registered in England.

Under the provisions of the new Registration Act no still-born children, however, should be buried without a *certificate*, stating that they were still-born, signed either by the registered medical practitioner who was in attendance at the birth, or by one who had examined the body. In the absence of a registered medical practitioner a declaration has to be made by the midwife or some other person qualified to give such information, stating that the child was not born alive.

Still-born children, therefore, are by the new law *certified* as such, although they are not registered. In England the proportion of still-born children to total births is supposed to be about 4 per cent., but this is uncertain.

In France, under the provisions of the Code Napoleon, children who die (either after or before birth) before registration, are recorded as still-born. Dr. Bertillon estimates that 22 in 100 of the children registered in France as still-born breathed, and such children in England would be registered among the births and deaths.

The number of deaths registered in France in the year 1875, exclusive of so-called still-born, was 845,062, and the death-rate was 23·1 per 1000 of population.

The number of still-born children registered under the provisions of the Code in the same year was 43,834, a deduction of 22 per cent. (9,643) from which represents the corrected number of still-born children in France in 1875, viz., 34,191.

Including the estimated number of live-born children (9643) the deaths in France in 1875 were 854,705, instead of 845,062, and the corrected death-rate, therefore, was 23·4 instead of 23·1 per 1000.

In France in 1875, the corrected proportion of still-born children to every 100 live-born children was 3·6. In Belgium the proportion in the years 1860-65 was 3·7.

Children born out of Wedlock.—As it was probable that many children born out of wedlock in the large towns had escaped registration, and that some had been registered in such a manner as not to disclose their illegitimacy, it was thought that the effect of the *compulsory clauses* of the new Registration Act would cause a relatively higher number of illegitimate births to be registered; but this has not happened, for the number of such births registered in England in the year 1875 was only 40,813, or 2290 less than in the previous year.

It must be borne in mind, however, that these results are for the first year under the provisions of the Births and Deaths Registration Act of 1874; fuller information may be disclosed on this subject when the Act has had more time to operate.

The average annual number of illegitimate births to every 100 births in the ten years 1865-74 was 5·7, against 5·0 in 1874, and 4·8 in 1875, so the rate of illegitimacy continues to decline.

Generally, the rate of illegitimacy is highest in the agricultural counties. The decrease of 4 per cent. in the rate of illegitimacy in England and

In the following counties there was a striking increase in the rate :— Rutlandshire 23·5 per cent., Hertfordshire 17·3, Essex 10·5, Dorsetshire 9·6, Monmouthshire 8·1, and Cambridgeshire 7·3.

The average annual number of children born out of wedlock in the 10 years 1846–55, to every 100 spinsters aged 15 and under 45, was 1·89. In the 10 years 1866–75 the proportional number fell to 1·79, showing a decrease of 5·3 per cent.

The increasing number of early marriages does not appear to account for the decreasing rate of illegitimacy in England.

As an illustration in confirmation of this, take the four counties of Cumberland, Norfolk, Salop, and Westmorland, which had the highest proportions per cent. of children born out of wedlock in the 10 years 1865–74 ; the mean annual rate of illegitimacy in these four counties was 9·6, and the mean proportional number who married under age to 100 marriages in 1865–74 was 5·7 for men, and 17·5 for women, whereas in the counties or parts of counties of Middlesex (extra-metropolitan), Surrey (extra-metropolitan), London, and Monmouth, where the proportion per cent. of children born out of wedlock was lowest—4·1 per cent., the proportional number who married under age to 100 marriages in 1865–74 was 5·0 for men, and 18·2 for women.

DEATHS.

The year 1875 was comparatively unhealthy, and the deaths were 19,821 above the number registered in the previous year. When measured by comparison with the population the mortality was found to be in excess of the average rate of the last ten years.

Years.	Number of deaths registered.		Deaths to 1000 Persons living.	
1871	-	514,879	-	22·6
1872	-	492,265	-	21·3
1873	-	492,520	-	21·1
1874	-	526,632	-	22·3
1875	-	546,453	-	22·8

The mortality is increased from various causes. Sometimes it is raised by contagious diseases, such as small-pox, measles, scarlet fever, which are largely disseminated by infection. At other times it is raised through the agency of impurities in the soil or water, by which fever or diarrhœa is spread. In some years it is raised by unusual atmospheric vicissitudes, and it was to this latter cause that the high rate of mortality in 1875 was chiefly due.

The severe cold of only a few weeks duration contributed to raise the mortality of the previous year; and the cold weather experienced in February, in the first week of March, and in the first three weeks of December was destructive to many lives in the year 1875. These two cold periods raised the mortality from diseases of the respiratory organs much above the average.

An inquiry into the *causes* of the deaths of the year by Dr. Farr will be found in the Appendix to the Report.

The principal feature of my Quarterly Returns consists in their being a record of the number of persons dying (1) from all causes, and (2) from certain epidemic diseases in each of 2194 sub-districts of England and Wales.

These returns are issued from this office with the greatest possible despatch, since they indicate the precise localities which may be suffering from any serious outbreak of disease, thus enabling administrative action to be immediately taken in order to mitigate or remove those unnatural causes which destroy life.

At the end of the year, the campaign having closed, the time has arrived when the battlefield can be surveyed at comparative leisure.

The dead are counted for the first time in this office, analyses are made of their names, sex, ages, causes of death, &c., and certain of these results are published in my Annual Reports.

Time, which could not be spared before, can now be afforded to measure more exactly the national losses that have been sustained, in different localities, by all the various causes of death, and to discuss how the experience gained in each successive campaign can be best brought to bear in defending the living from the future attacks of their foes.

The results of sanitary work can here be thoughtfully reviewed, and districts pointed out where health administration has resulted in a striking reduction of the death-rate.

One evidence of the practical success which has attended the sanitary works of the last quarter of a century, and which is sometimes overlooked, is to be found in the fact that—notwithstanding the rapid increase of population in towns, and the growth of villages and country parishes into densely populated districts—there has been no increase in the general death-rate. This implies that the efforts to prevent sickness and mortality have, in some measure, been successful, and that the general death-rate is less than it would have been if no sanitary measures had been administered.

To enable, however, a satisfactory reply to be given to the inquiry as to what sensible reduction has been effected in the death-rates in England since so much skill and money have been expended in administering sanitary laws it would first be necessary to distinguish the proportion of the mortality due to bad sanitary arrangements, from the proportion due to other causes, in other words, how far the mortality may be ascribed to inevitable, and how far to removable causes. We should require to know to what extent the mortality from epidemic diseases was affected by various meteorological phenomena; by defect or excess in the rain-fall; by long intervals of want of sunshine. And it may be asked what proportion was due to atmospheric vicissitudes, extremes of heat, or of cold, which raise the mortality from diarrhœa on the one hand, and from lung diseases on the other? In what proportion was the death-rate affected

by the spread of infectious diseases, such as small-pox, and scarlet fever, through prejudice and ignorance? How the germs of some zymotic diseases are first communicated? What proportion of the mortality of children is due to peculiar domestic arrangements in factory towns? and how much the death-rate is affected by the neglect of illegitimate infants.

The mortality is regulated by a variety of circumstances, but deficient as our sanitary regulations still are, they have been in many places so

greatly improved that, notwithstanding the various agencies so prejudicial to life constantly at work, and over which sanitary administration has little or no control, most beneficial results can already be traced in the general death-rates.

The mortality from fever in some of the large towns has been considerably reduced, and this dire disease no longer preys upon its victims to the extent it once did through bad drainage and overcrowding. Impure water no longer communicates cholera poison to their inhabitants, and where the marshy land, around some of them, has been drained, the mortality from phthisis, and lung diseases, has been greatly diminished.*

The effect of all this can be traced in the returns for the last 29 years. In Table D. the whole of England and Wales is divided into two portions, urban and rural. The annual death-rate in the chief towns, in the 29 years 1847-75, was 25 per 1000; in the five years 1851-5 it was 25½; in 1871-5 it was 24 per 1000. In the small towns and country parishes, in the same periods, the respective death-rates were 20, 20, and 19 per 1000; the greatest improvement being observed in the denser districts.

Sex and Age.—The numbers of males and females who died in 1875 were 282,202 and 264,251 respectively. The death-rate of males was 24·2 per 1000 males living; that of females 21·5 per 1000 females living. The averages for the 25 years 1848-72 were 23·5 for males and 21·4 for females, so that at all ages the mortality of males was, in 1875, slightly above the average rate, while that of females was nearly the same as the average.

The temperature in 1875 was very variable. The severe cold weather which set in about the last week of November 1874, and lasted until

* See Registrar-General's 37th Annual Report, p. xix, where the good effects of sanitary administration, in recent years, is shown in a reduction in the death-rate of each of thirteen registration districts.

1st January 1875, was followed by a month of very warm weather. At the end of January another cold period set in, and continued nearly to the end of March. This was followed by 5 days mild weather, after which the temperature descended below the average. Bitterly cold weather prevailed for four weeks in November and December. These sudden alternations of temperature exerted most injurious effects on the health of persons aged 45 and upwards, and proved fatal to hundreds. For both males and females, the mortality at each period of age, up to 35, was lower than the average, at and after that age the mortality was higher.

Seasons.—The winter of 1875 was unusually severe; extremes of temperature, together with a long continuance of east winds, were very fatal to infants and to elderly people, and no less than 162,256 deaths were registered during the first quarter of the year: the mortality was at the annual rate of 27·5 per 1000 of population, or 2·6 per 1000 above the average of the 38 years 1838–75. The rain-fall for the quarter, as measured at the Royal Observatory, Greenwich, was 4·4 inches, or 0·6 in. below the average of 60 years.

During the second quarter of the year, when 130,999 deaths were registered, the annual rate of mortality, 21·9, was near the average. The meteorological conditions of the quarter, however, were unfavourable to health. The weather was very cold during the greater part of April, warm in May, and cold in the last three weeks of June, when the average daily deficiency of temperature was $2\frac{3}{4}^{\circ}$. These trying atmospheric variations were the causes of an excess of deaths from diseases of the respiratory organs.

The mortality of the third quarter of the year was at the annual rate of 20·1 per 1000 of population, or ·5 per 1000 below the average. The weather until the 5th of August was cold, while the mean temperature of September was 2·8° above the average of 34 years. Scarlatina and summer diarrhoea were excessively fatal. The rain-fall measured 10·3 inches, and exceeded the average of 60 years by 2·9 inches.

Sudden fluctuations of temperature occurred during the last quarter of the year, and the weather was bitterly cold during four weeks of November and December. The annual rate of mortality, however, 21·8, was not above the average.

Locality.—The death-rate in England in 1875 was 22·8 per 1000 of population. In 12 counties, &c. it was as high as, or higher than, this standard:—Lancashire heads the list with a mortality of 26·9; the county of Nottingham stands second, 25·0; next in order are the West and the East Ridings of York; their respective rates were 24·8 and 24·7; then follow Leicestershire 24·7, Durham 24·4, Warwickshire 24·1, Northumberland 24·1, Cumberland with a death-rate as high as that of London, 23·8, Staffordshire 23·4, Cheshire 23·0, and Derbyshire and South Wales 22·8. The mortality in the remaining counties, &c. was below that of all England, and ranged from 17·6 in the extra-metropolitan part of Surrey, and 17·8 in Westmorland, to 22·2 in Gloucestershire, 22·5 in the North Riding of Yorkshire, and 22·6 in North Wales.

In addition to vicissitudes of temperature, local agencies must have been at work to have produced such striking effects on the health of different populations as are exhibited in the following counties, where the death-rate in 1875 was considerably higher than the average of the preceding 10 years. Passing these in review topographically, it appears that the mortality in 1875, and the average annual rate in 1865–74, respectively, were in Hertfordshire 20·4 and 18·7, Northamptonshire 21·6 and 20·5, Huntingdonshire 21·4 and 18·8, Cambridgeshire 21·2 and 19·1, Suffolk 19·9 and 18·8, Norfolk 21·5 and 20·4, Wiltshire 20·3 and 18·8, Dorsetshire 19·5 and 18·0, Somersetshire 20·9 and 19·2, Gloucestershire 22·2 and 20·4, Worcestershire 20·7 and 19·6, Warwickshire 24·1 and 22·7,

Leicestershire 24·7 and 22·0, Lincolnshire 20·2 and 18·9, Nottinghamshire 25·0 and 21·9, Derbyshire 22·8 and 21·6, Cheshire 23·0 and 22·1, East Riding of Yorkshire 24·7 and 22·2, North Riding of Yorkshire 22·5 and 20·4, Cumberland 23·8 and 22·6, South Wales 22·8 and 21·7, and North Wales 22·6 and 21·0.

It would add to the usefulness of my annual reports if death-rates could be calculated and published for every district, but time, and the comparatively small strength of the statistical department, only admit of this being done for the aggregated facts of the 10 years which intervene between each census.

Indeed, had it not been for the introduction of the arithmometer,—two or three of which machines are in constant use,—it would be impossible to produce the mass of calculations which already appear in my weekly and quarterly reports, in my annual summary of London, and in the preliminary tables and appendices to my annual reports.

To enable Health Officers to ascertain the annual death-rates of their districts correctly, it is necessary that they should know the numbers living out of which the deaths occur.

For some places, tolerably good estimates of population can be deduced from the rate of increase which prevailed between the two last Censuses, but for many towns and cities this method is found unreliable. So long a period as 10 years should not be allowed to elapse between the enumerations of the living in large towns, especially as the expense of enumerating the *mere numbers* of the population is comparatively small.

A high mortality may be lurking beneath a death-rate derived from an *over-estimated* population, and experience has shown that the estimated population of large towns has generally been overstated.

The borough of Barrow-in-Furness, and the township of Newton Moor, near Manchester,—where enumerations of the population have been recently made,—may be cited as setting good examples.

NAME of TOWN.	Description.	Enumerated Population.				
		1861.	1871.	1874.	1876.	1877.
Barrow-in-Furness	{ Municipal Borough }	—	18,774	41,068	—	37,350
Newton Moor	{ Urban Sanitary District }	6,440	6,295	—	7,476	—

In the case of Barrow-in-Furness the cost of the Census of 1874 was under 20*l.*, or at the rate of rather less than 9*s.* 9*d.* per 1000, and in that of Newton Moor in 1876 it was 7*l.* 7*s.*, or 19*s.* 8*d.* per 1000, including printing.

SANITARY STATE OF EIGHTEEN REGISTRATION DISTRICTS.

Special inquiries have been made for the year 1875, into the sanitary condition of eighteen registration districts not included in any of the eighteen principal towns, or in the list of fifty town districts. They vary very much in size and population, but their density, considering that they are Superintendent Registrars' districts, indicates their urban character. They have been selected because their annual rate of mortality was higher, in the 10 years 1861-70, than it was in the previous decade. They comprise 48 urban and 16 rural sanitary districts; in all 64 separate jurisdictions, the hygienic welfare of whose inhabitants is watched over by about 60 Medical Officers of Health. Taking the mean results

in these eighteen districts, there has been no increase in their death-rate in the five years 1871-5, compared with that in the 10 years 1861-70. For the area, population in 1861 and 1871, and mortality of these districts, see Table F.

Sanitary works in England are comparatively of recent date; the country is in a state of sanitary transition; and Health officers,* dispersed throughout the length and breadth of the land, finding that the death-rates are amenable to sanitary improvements, are encouraged in their efforts to increase the salubrity of their respective areas.

The particulars relating to the health administration of these eighteen districts serve as fair specimens of what is being done to overcome the obstacles which stand in the way of sanitary progress throughout the country generally, and will enable some idea to be formed of the magnitude of the work that is being undertaken in the attempt to promote the health and happiness of 24,000,000 of people.

For most of the particulars relating to the hygienic conditions of these eighteen districts, I am indebted to the courtesy of the respective Medical Officers of Health of the urban and rural sanitary areas which are situated in these registration districts.

In reviewing the death-rates, it should be borne in mind that the total deaths, in a district, are made up of a large number of the deaths of children. In Liverpool, for instance, in 1861-70, no less than 45 per cent. of the deaths at all ages were those of children under five years of age. The proportion varies considerably in different districts, and the death-rates at all ages are very much influenced by this element.

Generally those districts with a high mortality also have a high birth-rate, but it is a fallacy to consider that a high birth-rate is the cause of a high death-rate at all ages. It is true that the mortality in the first year of life is much higher, but afterwards the births go on steadily increasing the number of children and adults at ages when the mortality is lowest.

DEATHS at ALL AGES, and UNDER 5 YEARS OF AGE, to 1000 Living at All Ages.

	In the 18 Urban Districts, 1861-70. (See Table F.)	In the 63 Healthy Districts.	In England and Wales, 1861-70.
ALL AGES - - -	24·1	17·5	22·4
Children under 5 Years of Age (included in the above) - - -	11·0	5·3	9·2

Thus in these eighteen urban districts, where the mean death-rate at all ages was 24·1 per 1000 living, 11 of the 24 deaths were those of children under five years of age, whereas in the 63 healthy districts of England and Wales, where the death-rate at all ages was 17·5 per 1000 living, the death-rate of children of this age, was only 5·3 per 1000 living of all ages.

The difference, therefore, in the general mortality of the eighteen urban districts and the sixty-three healthy districts, without distinction of age, is 6·6, the greater part of which — 5·7 per 1000 — is

* On 31st December 1876, there were in England and Wales 942 urban, and 587 rural sanitary districts, besides the 39 metropolitan districts, making in all, 1568 areas of separate jurisdictions for sanitary purposes, over most of which Health Officers presided. Of the 942 urban sanitary districts, 221 were Municipal Boroughs, 666 Local Board Districts, and 55 Improvement Act districts.

accounted for by the excess in the death-rate of children under five years of age.*

In the registration district of Canterbury, which comprises the greater part of the city, the average annual mortality was at the high rate of 24 per 1000 in 1861-70. This has to be corrected for the excess of deaths in the Kent and Canterbury hospital, but the rate stood the same in the five years 1871-5.† The land in and about Canterbury is marshy and flat, and the mortality by phthisis and lung diseases is comparatively high. The drainage of the land would no doubt have a beneficial effect on the health of the inhabitants, as was the case in the Isle of Ely. During the last 10 or 12 years the city has been thoroughly drained and sewered, and the quality of the water, which it has received from a company since 1868, is excellent. The supply is drawn from a well sunk in the chalk to a depth of 500 feet, at Wincheap, about a mile from the city; the water, softened by Dr. Clarke's process, is pumped to an elevation to throw it up to St. Thomas's hill, where it is above the highest point of the Cathedral. When all the sanitary works required are carried out and the sanitary administration is effective, the results will soon be visible in the reduction of the death-rate.

The mortality of the registration district of Bury St. Edmunds was 23 per 1000 in 1861-70, and there was no reduction in the death-rate in 1871-5. The water works supply the greater part of the inhabitants with good water, and the town is sewered, with the exception of one or

TABLE F.—The following 18 DISTRICTS, which are not comprised in any of the 18 Principal Towns, or included in the List of the 50 Town Districts, had (1) an AVERAGE ANNUAL RATE of MORTALITY in the 10 Years 1861-70 above the AVERAGE for ALL ENGLAND AND WALES, 22 per 1,000, and (2) the MORTALITY in each of them was HIGHER than that in the previous DECADE 1851-60.

* As to how far the general rate of mortality is affected by the deaths at different ages, see Letter to the Registrar-General by Dr. Farr in the Supplement to the 25th Annual Report, pp. xxvii-viii.

† The number of inhabitants in Canterbury has decreased since 1861. The population of 1871 has therefore been used to obtain the annual mortality in 1871-5. The decrease of population is more apparent than real, the military not being so numerous in 1871, and a large number of labourers having left, owing to the completion of the railway, which was in progress in 1861.

two streets, where sewers are now ordered. The sewage is used for irrigation purposes.

In the registration district of Runcorn (which includes the urban and rural sanitary districts of the same name) the mortality fell from 23, in the 10 years 1861-70, to 21 per 1000 in the five years 1871-5. Nine or 10 years ago the town received an abundant supply of pure water from a well sunk in the red sandstone, more than 400 feet deep, and it is the opinion of Mr. Mouritz, the Medical Officer of Health, that this is the main cause of the reduction in the death-rate.

The registration district of Warrington includes the urban sanitary districts of Warrington, Newton-in-Makerfield, and Haydock, besides the rural sanitary district of Warrington. Its mortality fell from 26 per 1000 in 1861-70, to 23 per 1000 in the five years 1871-5. This reduction is chiefly attributed to various sanitary improvements in the town of Warrington, among which may be mentioned the near approach to completion of a general sewerage system. An hospital for the isolation of infectious diseases is being erected. The rate of infant mortality is high, and the water supply is unsatisfactory both in quality and quantity. In Newton-in-Makerfield, which is well drained and sewered, extended sewerage works and water supply are in progress; while in Haydock, Dr. Watkins reports that "the very reverse obtains."

In the registration district of Haslingden, which includes the urban sanitary districts of Haslingden, Bacup,* Rawtenstall, and Accrington, and the rural sanitary district of Haslingden, there has been no reduction in the mortality in the five years 1871-5, as compared with that in the decade 1861-70, when the rate was 23 per 1000. The drainage of the town of Haslingden is very deficient; a comprehensive scheme, however, is now awaiting approval. In the year 1874-5 Haslingden suffered severely from scarlet fever and measles. There is much that requires the serious attention of the sanitary authorities, not the least of which is the neglect of infants on account of the mothers being employed at the mills. Accrington is well supplied with pure water; new sewers and drains are being constructed, and other important sanitary works are in progress.

The mortality of the registration district of Chorley was 23 per 1000 in 1861-70, and there was no reduction in the death-rate in 1871-5. It includes the urban sanitary districts of Chorley, Leyland, Croston, and Adlington, and the rural sanitary district of Chorley. The town of Chorley was sewered in 1855, and the main drains have recently been relaid; the sewage, which formerly polluted the rivers Chor and Yarrow is now diverted to a sewage farm in connection with the town; the water is the same as that supplied to Liverpool from the Rivington reservoirs. The drainage, sewerage, and water supply of Leyland are now under the consideration of the sanitary authority.

The sanitary state of the registration district of Keighley shows no signs of improvement. The mortality in 1861-70 was as high as 24 per 1000, at which rate it remained in 1871-75. The registration district includes the urban sanitary districts of Keighley, Haworth, Oakworth, Oxenhope, the two districts of Bingley, and the rural sanitary district of Keighley. Dr. Hilles, the intelligent Medical Officer of Health, found the town of Keighley, in 1873, in a deplorably unsanitary condition. Among its many deficiencies were the bad and insufficient water supply, the defective drainage, and the pollution of the Beck and the river Worth. He was successful in contributing to the adoption of some sanitary measures, but his engagement terminated with the suppression of the serious nuisances connected with the fleece mills. If the inhabitants of Keighley desire to enjoy pure air and water, and a well-drained soil, they will do well to imitate the enlightened sanitary administration of Coventry, and Newport

* Part of Bacup is in the Superintendent Registrar's District of Rochdale.

(Monmouth), where the mortality has been considerably reduced. The urban sanitary district of Bingley has an abundant supply of pure water, and the town is to be drained and sewered.

In the registration district of Dewsbury there was a reduction in the mortality. In the 10 years 1861-70 it was at the annual rate of 26 per 1000, whereas in the five years 1871-5 it fell to 24 per 1000. It includes the urban sanitary districts of Dewsbury, Morley, Batley, Soothill Nether, Soothill Upper, Ossett-with-Gawthorpe, Mirfield, Birstal, Gomersal, Heckmondwike, Liversedge, Ravensthorpe, and Thornhill, and the rural sanitary district of Dewsbury. The borough of Dewsbury has been supplied with good water about 12 years, Ravensthorpe, Thornhill, and Soothill about four years. Mirfield is now to be supplied with good water. In Ossett-with-Gawthorpe the sanitary defects are very great, the water supply being scanty and impure, and the drainage bad. Remedial measures, however, are in progress, an efficient water supply having been obtained and an extensive deep drainage scheme adopted. In the opinion of the Medical Officer of Health the comparative salubrity which this town has hitherto enjoyed is owing to its elevated position, to its straggling character, to the absence of courts and alleys, and to improved dwellings. Many of the townships receive their water supply from wells (some of them deep and some superficial), and from ditches. During the last five years great improvements have been made in the urban sanitary district of Morley; it now receives an abundant supply of pure water, and it is well drained. In Batley an extensive drainage scheme has been carried out, and the borough has now a largely increased supply of excellent water. A few years ago the urban sanitary district of Soothill Upper was almost without water, now it has an abundant supply. So the reduction in the mortality of the entire registration district is attributable to better sanitary arrangements generally: increased house accommodation has been provided, and the drainage and water supply have been improved in most of the urban sanitary districts.

In the registration district of Pontefract the mortality rose from 23 in 1861-70, to 24 per 1000 in 1871-5. It includes the urban sanitary districts of Pontefract, Castleford, Methley, and Whitwood, as well as the rural sanitary district of Pontefract. The town of Pontefract is capable of considerable improvement; no sanitary works are in progress, and the drainage is very bad. The water—pronounced by Professor Frankland to be fit for present consumption—is obtained from a deep well on the northern side of the town; it is stored in a covered tank recently built at a cost of several thousand pounds, but the supply is not abundant, and the Corporation is endeavouring to procure an additional supply. Some of the outlying townships, such as Featherstone, Snydale, and Purston-Jaglin are in a very unhealthy state.

In the registration district of Barnsley, where the population has rapidly increased during the last four or five years, the mortality rose from 25 per 1000 in 1861-70, to 26 in 1871-75. It includes the urban sanitary districts of Barnsley, Darton, Dodworth, Monk Bretton, Wombwell, and Worsborough, and the rural sanitary district of Barnsley. In 1873-4 there was a severe epidemic of scarlet fever, and there has been an influx into the town of Barnsley of a large number of miners whose wives had no idea of the proper management of children. Insufficient house accommodation was the cause of much overcrowding. An injunction, forbidding the construction of any more sewers until measures were adopted to prevent the further pollution of the river Deane, has arrested the progress of sanitary work for two or three years. Dr. Sadler reports that about 70 acres of land are being prepared under the superintendence of Mr. Bailey Denton for the purification of the sewage. Other parts of the district have been recently sewered, and further improvements are contemplated. In the urban sanitary districts of Dodworth and Monk Bretton the

drainage is reported to be inefficient. The water supply, however, is abundant and pure.

In the registration district of Rotherham, the mortality in the 10 years 1861-70, was at the high rate of 24 per 1000, and no improvement had taken place in the five years 1871-5. It includes the urban sanitary districts of Rotherham, Rawmarsh, Greasbrough, Swinton, and Wath-upon-Dearne, and the rural sanitary district of Rotherham. The main portion of the town of Rotherham is situated on the declivities of three hills, which terminate at the eastern side of the river Don, the remaining portion being built upon the alluvial valley of the river. The town was sewered afresh some years since, and the water supply (derived from the Wellgate spring, the Pinch Mill spring, and the streams known as the Ulley and Morthen brooks) is good and abundant, but no reduction in the mortality can be looked for until the sewage of Sheffield (six miles above) and that of the intervening populous suburbs is prevented from entering the river Don, which runs through Rotherham. The urban sanitary district of Rawmarsh has an abundant supply of pure water, and a scheme for sewerage of the township is about to be adopted. No sanitary works are in progress in the urban sanitary district of Greasbrough, but a scheme for the disposal of the sewage of a part of the district is in contemplation. This district is neither well sewered nor drained, but with the exception of certain outlying townships, the water supply is good. The urban sanitary district of Wath is not well sewered, and the drains empty themselves into a stream which runs through the village. The water supply is liable to sewage contamination: about five years ago there was an outbreak of enteric fever from this cause.

The mortality of the registration district of Goole fell from 23 per 1000 in 1861-70, to 22 per 1000 in 1871-5. The returns show a marked diminution in the death-rate from phthisis, the average annual mortality from that disease per 1000 living, in the 10 years 1851-60, being 2.14, whereas in the five years 1871-5, it had fallen to 1.48. The town of Goole lies low, but Dr. Parsons states that this does not appear to render it insalubrious. Since the draining and warping of the land, malarious diseases have entirely disappeared and the climate is dry and bracing. Very little, however, has been effected in the town as regards public sanitary works so that the mortality from contagious diseases is still high. The sewerage is most defective, and the water supply very impure and deficient. Goole was constituted an urban sanitary district in 1875, its population—estimated from a census taken for the school board in the middle of 1875—was 9000 against 7680 in 1871, its death-rate in 1875 was 26 per 1000. The town suffered in 1874-5 from a severe epidemic of scarlet fever, in 1875 from infantile diarrhoea, and in 1875-6 from enteric fever. The sanitary condition of the rural townships is deplorable; an outbreak of diphtheria occurred in Garthorpe in 1874. The health administration of Goole is in the hands of a skilful and efficient Health Officer, but much has to be done to place it in a good hygienic condition. The registration district includes the urban and rural sanitary districts of Goole.

The chief cause of the decrease of the mortality in the registration district of Whitby, from 23 per 1000 in 1861-70 to 21 per 1000 in 1871-5, is said to be the establishment of water works and the extreme purity of the water,* which is derived from the Hazel Head spring; it is moderately

* Mr. Taylerson, L.R.C.P., the Medical Officer of Health for Whitby, has been good enough to supply the following note by Mr. Lucas, F.G.S., relating to the quality of the water:—"The water is filtered over a very large area of moor without peat, through a fine grained, pure silicious sandstone, which forms a spread covered only with ling, and often bare. I believe no more favourable conditions for obtaining pure water could possibly be found."

hard, but very pleasant to the taste. The yearly consumption for the town, and for New Whitby, is 13,318,750 gallons, all of which formerly passed down the Esk into the sea unutilized. Till the year 1867 the inhabitants of the town were dependent for their water supply on a few public pumps; and as this supply was limited, they were compelled, at times, to use rain water, or the contaminated water of ponds. Other sanitary arrangements have not contributed much to the reduction of the mortality. A scheme for new sewerage works is under consideration. A land slip of considerable magnitude destroyed a large number of small tenements—all fever dens—in the worst part of the town. The registration district includes the urban sanitary districts of Whitby and Hinderwell and the rural sanitary district of Whitby.

The mortality of the registration district of Houghton-le-Spring, which was 21 per 1000 in 1851-60, increased in the next decade to 24, and to 25 in the five years 1871-5. It includes the urban and rural sanitary districts of the same name. The population of the town in 1871 was 13,168; since then it has rapidly increased owing to an extensive development of trade, and Lord Durham has erected about 700 houses; the population is now estimated at 17,370. The water supply is good, and the greater part of the town is drained, but its sanitary condition is not as healthy as it might be. A scheme for the completion of the drainage, and for disposal of the sewage, has been under consideration, but no decisive action has been taken in the matter. As regards the rural parts of the district the sanitary arrangements are very deficient, many of the villages are supplied with well water, carted from one to three miles distant. A water company, however, is sinking a shaft in the district. A general scheme for the drainage of the rural districts has been prepared; and the works will be commenced as soon as practicable.

In the registration district of Chester-le-Street the mortality increased from 21 per 1000 in 1851-60, to 24 in 1861-70, and to 26 in 1871-5. It includes the rural sanitary district of the same name; there is no urban sanitary district. In 1874-5 the sum of about 15,000*l.* was expended for an increased water supply, and on sewerage works. The sanitary authorities have resolved to carry out the sewerage of the district in an efficient manner. Plans have been prepared for that purpose. Other sanitary improvements are in progress, but the district is in a very unhealthy state. In 1869-75 there was increased prosperity in coal mining, and much overcrowding ensued in colliery villages: the result of which was a great excess of early marriages, and a high rate of infant mortality.

The rise, and rapid development of the iron trade in Cockermouth, since 1860, brought a large number of labourers with their families, chiefly Irish, into the rural townships, which were utterly unprepared for their reception. This produced all those unhealthy conditions incidental to overcrowding and improper housing. Sanitary action was in abeyance in Cockermouth until the appointment of a medical officer in 1873, so the mortality was high. The death-rate of the registration district (which includes the urban sanitary districts of Cockermouth, Keswick, Workington, and Maryport, and the rural sanitary district of Cockermouth) rose from 23 per 1000, in 1861-70, to 24 in 1871-5. Mr. Fox states that, although Cockermouth is surrounded with lakes and mountain streams, no greater sanitary defect exists than the want of pure water for domestic use. Nearly all of 50 townships and parishes were reported in 1874 to be suffering from an insufficient, or otherwise faulty, water supply; in some townships the mountain streams are polluted by the washings of mines and manufactures (which it is difficult to rectify on account of long established usage) and by drainage. In other townships the water, though free from organic impurity, is very hard. The necessary pumping in the coal pits also deprives many of the townships of drinking water. Arrangements

are now being made to remedy this grave defect. In 1862-3 the town of Cockermouth adopted the Local Government Act, and in 1867-8 a good system of sewerage was constructed, and a constant water supply laid down from the river Cocker. The high rate of infant mortality led to an examination of the water supply, and of the sewers, when it was discovered that a well feeding the filtering reservoir was out of repair, and the water was passing into the mains unfiltered. The sewers, which were blocked up, are now regularly inspected. Mr. Fox regrets that so many "minor nuisances" are still allowed to exist. Dr. Pearson reports favourably as to the health of his district of Maryport, where there is an abundant supply of pure water brought from a great distance. The sewage is taken away from the town daily, so there are very few underground sewers. Sanitary works have had great influence in improving the hygienic condition of this town, where fever is now rare. Thirty years ago the sanitary state of Maryport was deplorable, it never being free from fever, or other infectious diseases. The cholera epidemic, in 1849, roused the inhabitants, and compelled them to attend to the urgent and repeated remonstrances of their Health Officer.

The mortality in the registration district of Whitehaven gradually increased; in 1851-60 it was 23 per 1000, in the next decade 25, and in the five years 1871-5 it was as high as 27 per 1000. It includes the urban sanitary districts of Whitehaven and Cleator Moor, and the rural sanitary district of Whitehaven. Dr. Lamb, the Medical Officer of Health for the urban sanitary district of Whitehaven, states that nearly half the deaths were from various forms of chest diseases. Comparatively, there were very few deaths from contagious diseases during the last three or four years. The annexed results indicate that the mortality by lung diseases is increasing.

YEARS.	Annual Rate of Mortality per 1000 of Population by Lung Diseases in the Registration district of Whitehaven.
1851-60	2.94
1861-70	3.47
1871-75	4.33

The mortality from phthisis was also high, being 2.62 per 1000 of population in 1861-70, and 2.34 per 1000 in 1871-5. The town is well sewered and watered, but no particular sanitary works are in progress. From the rural districts Mr. Symes reports that the prosperity, in 1871-4, in the coal and iron industries was the cause of an excess of early marriages, and of increased mortality of infants. High wages occasioned an enormous amount of intemperance. The deplorable overcrowding—houses being hastily run up without proper sanitary arrangements—and want of wholesome water were the causes of fever. In 1873 there was an epidemic of small-pox. The urban sanitary district of Cleator Moor is well drained and sewered, and has an abundant supply of pure water.

In the registration district of Wrexham the mortality in the 10 years 1861-70, was at the annual rate of 24 per 1000; in the five years 1871-5 it had fallen to 22. It includes the urban and rural sanitary districts of Wrexham. The Medical Officer of Health for the urban district considers that the town is well drained and sewered. The water supply—derived from the hills of Ruabon, and stored in a reservoir—is pure and abundant. Some of the springs and pumps have been closed as the water was found to be impure; the waterworks company are building a larger reservoir.

There is much over-crowding, and there is a great want of suitable dwellings for the poorer classes. In connection with the town is a sewage-farm. Both the sewage and the farm are let on lease to a gentleman (Colonel Jones). The corporation main sewerage works cost about 11,080*l*.

DEATH-RATES OF CHILDREN.

Children under one year of Age.—The high rate of infant mortality continues to occupy the earnest attention of medical statistis. The death-rate of infants* in England and Wales, in 1875, was 158 per 1000, or 4 per 1000 above the average rate in the 10 years 1861–70. This implies that the mortality among infants is increasing.

The subjoined Table G. shows the death-rate of infants from all causes in 18 large towns. The highest rates in 1875 prevailed in Leicester, 245 per 1000, Liverpool 210, Norwich 210, Bradford 200, Nottingham 199,

* By the death-rate of infants throughout this report, is meant the proportional number of deaths of children under one year of age to every 1000 births. “Death-rate” under 1 is used for its shortness instead of the more correct term “probability of dying under the age of 1.” The births, out of which the deaths under 1 year of age occurred in the year 1875, were those registered in the two years 1874 and 1875. To obtain the proportional number of deaths (0–1) to births, the deaths (0–1) should be divided by $\left(\frac{B_{74} + B_{75}}{2}\right)$ the mean number of births in 1874–75; but as the *mean* number differed so little from the annual number, the births in the year 1875 were used in obtaining the results relating to infant mortality. In calculating the death-rates of infants, it has been found more accurate to apply the number of *births* to the deaths under one year of age, than the numbers *enumerated at the Census*, as it is believed these were not always accurately returned. The practice sometimes being to put down children in the first, second, and third years of age as 1, 2, 3, instead of 0, 1, 2, a certain number of children in the first year of age, who should have been returned as 0–1, were returned as 1–2. See Paper by Dr. Farr on Infant Mortality, and on alleged inaccuracies of the Census, in Vol. XXVIII. of the Journal of the Statistical Society, p. 125.

Leeds 197, Birmingham 196, and Hull 191. Portsmouth had the lowest rate, 133 per 1000.

What are the causes of such high death-rates of infants in large towns? This is a question of vital importance, and to assist in giving a satisfactory answer, the average annual death-rates of infants from each of eleven causes, in the three years 1873-5, have been calculated for 15 large towns. The results are shown in the subjoined Table H.

The table deserves careful study, for the agencies which destroy infant life are many, and they vary in different localities. Some of the principal causes are improper and insufficient food, bad management, use of opiates, neglect, early marriages, and debility of mothers; but whatever may be the special agencies at work which are so prejudicial to infant life, it must be borne in mind that a high death-rate is in a great measure also due to bad sanitary arrangements.

In towns such as Sunderland, Wolverhampton, and Newcastle-upon-Tyne, where the iron and coal mining industries prosper, and where the marriages of minors are in excess, mismanagement through ignorance is probably one of the causes of a high infant death-rate, while in towns such as Oldham, Norwich, Salford, Nottingham, Leeds, Leicester, and Manchester, where the women are more or less employed away from home in the manufacture of textile fabrics, it is probable that one of the causes of the high rates of infant mortality is maternal neglect. In the hardware manufacturing towns, such as Sheffield and Birmingham, comparatively few women are employed in the factories.

* The results for the fifteen large towns are deduced from returns supplied by the Medical Officers of Health. As far as practicable differences in nomenclature have been adjusted.

† In England, in the three years 1873-5, the causes of death of 5,354 infants (1·4 per cent.) were not stated.

‡ The results for Scotland are for the three years 1870-2. The causes of death of 2,894 infants (6·6 per cent.) were not stated in those three years. Dr. Robertson, the Superintendent of the Statistical Department of the General Register Office, Edinburgh, states that it cannot be assumed that the popular but utterly unscientific term "bowel hives" is now used by informants in any large proportion of these 2,894 cases; the term being rarely observed in the certificates of death.

As regards illegitimate infants, the chief causes of the high mortality are no doubt improper food and neglect; but the death-rate of children born out of wedlock will be discussed further on.

The causes of death which are more directly the result of neglect and mismanagement, are convulsions, diarrhœa, and atrophy.

In Scotland, infant mortality is not so high as it is in England. In the 10 years 1861-70, the average annual death-rate was 154 per 1000 in England, and 121 in Scotland, and it is remarkable that the excess in the number of deaths from convulsions, diarrhœa, atrophy, and premature birth, accounts for nearly the whole of the difference in the high rate of infant mortality in England, compared with that of Scotland. The number of deaths of infants in England, in the 10 years 1861-70, from convulsions, was 208,320, and from diarrhœa, 119,430. In Scotland the respective numbers were 5801 and 6156. The births registered during the same period in England were 7,500,096, and in Scotland 1,120,791. Thus the average annual death-rate of infants in 1861-70, in England, from convulsions, was 27·8, and from diarrhœa 15·9 per 1000, whereas in Scotland the respective death-rates were only 5·2 and 5·5 per 1000. In Table H. average annual rates of infant mortality in England and Scotland are shown from each of eleven causes of death.

The cause of this high mortality of infants from convulsions and diarrhœa in England, compared with Scotland, is supposed to be due to bad feeding.*

Compared with the fifteen English towns the mortality of infants from all causes in the city of Glasgow in the three years 1873-75, was comparatively low, viz., 163·3 per 1000 births. Only Portsmouth and London have a lower rate of infant mortality. The death-rates per 1000 in the city of Glasgow from each of several causes were as follows: measles 4·3, scarlet fever 3·4, whooping-cough 8·9, diarrhœal diseases 12·1, lung diseases 37·7, atrophy and debility 23·5, premature birth 14·9, fever 0·5, small-pox 1·0, croup and diphtheria 2·3, consumption 2·3, nervous diseases 25·4, and from other causes 27·0.

The mortality in the mining and manufacturing towns of England from convulsions, diarrhœa, atrophy, and premature birth together, was 86 per 1000 in Oldham, in Sheffield 87, Wolverhampton 89, Salford 99, Birmingham 101, Manchester 102, Sunderland 103, Leeds 106, Newcastle-upon-Tyne 112, Norwich 122, Nottingham 130, and Leicester 153.

No comparison, however, of infant mortality, in different towns should be made without looking to the occupations of the women.

In seven of these fifteen towns, women are employed in greater or less numbers, at the mills and factories, in textile manufactures. In Oldham, these four causes of death (convulsions, diarrhœa, atrophy, and premature birth) represented only 48 per cent. of the total mortality of infants. In Salford the proportion was 54 per cent., in Manchester 53, and in Leeds 53. In Norwich, Nottingham, and Leicester respectively, these four causes represented 66, 65, and 71 per cent. of the total mortality of infants.

Turning to the mining, and hardware manufacturing towns, these four causes represented 47 per cent. of the total mortality in Sheffield, and 54 in Wolverhampton and Birmingham. In Newcastle-upon-Tyne and Sunderland the respective proportions were higher, viz., 59 and 61 per cent.

In Oldham, the rate of infant mortality was high, viz., 180 per 1000: the excess, as compared with some of the other fifteen towns in Table H., is no doubt partly owing to the mothers being employed at the mills. About three weeks or a month is the average time they remain at home after the birth of a child. Dr. Sutton recommends the establishment of day nurseries

* See Paper by Dr. Stark; M.D., F.R.S.E., as to treatment of infants in Scotland, in Vol. XXIX. of the Journal of the Statistical Society, pp. 13-17.

for the better protection of infants during the hours they are deprived of maternal care. It is remarkable that, although the proportion of women, aged 20 years and upwards, employed in textile manufactures was highest in this town, 346 per 1000, yet the rate of infant mortality was relatively lower than in any of the other six textile manufacturing towns. The mortality from lung diseases was excessively high in Oldham.

In Norwich, the death-rate of infants was higher than in Oldham, being 183 per 1000. The proportion of women employed in textile manufactures was lower in this town than in any of the others; it was 58 per 1000 living. Dr. Crosse reports that much ignorance prevails among the poorer classes as to the proper way of rearing infants, and this appears to be borne out by the results, for the mortality from atrophy was at the high rate of 63 per 1000 (see Table H.); it is the highest rate from this cause in any of the fifteen large towns.

In Salford the rate of infant mortality differed from that in Manchester. In the former the rate was 184; in the latter it was 193 per 1000. The proportion of women employed in the textile manufactures, in these two towns, was 152 per 1000. In Salford, Dr. Tatham reports that the chief cause of the high death-rate was due to the mothers leaving their offspring soon after birth, in order to work at the cotton mills: their infants, thus neglected, soon fell an easy prey to the first disorder that attacked them.

In Salford the mortality from diarrhoea, and in Manchester from convulsions and lung diseases, was higher than the mean for the fifteen towns.

In Nottingham, the mortality of infants reached the high rate of 200 per 1000. The proportion of women engaged in textile manufactures was also high, viz., 249 per 1000. Dr. Seaton states that, although the death-rate of infants was unduly augmented by married women being thus employed, he is of opinion that infants were not deprived of maternal care, in Nottingham, to the same extent as they were in some other so-called textile manufacturing towns. Of the 6758 women thus employed, 1487 were engaged in hosiery manufacture. The death-rate from atrophy was excessively high in Nottingham, viz., 47 per 1000.

TABLE I.—NUMBER, and PROPORTION per 1,000, of FEMALES 20 YEARS of AGE and UPWARDS employed (1) in TEXTILE MANUFACTURES and (2) in HOUSEHOLD DUTIES, according to the Census of 1871; together with the rate of INFANT MORTALITY 1873-5, in the SEVEN FACTORY TOWNS, and in PORTSMOUTH, and LONDON, arranged in the order indicated by the Results in Col. 4.

* The results in this column represent the number of women at home; generally engaged in household duties, but in certain cases assisting in their husbands' business.

In Leeds, the rate of infant mortality was as high as 201 per 1000. The proportion of women employed in textile manufactures was 93 per 1000.

In Leicester, infant mortality was greatly in excess, being at the rate of 217 per 1000. The proportion of women employed in textile manufactures was 122 per 1000. Of the 3368 women working in these fabrics, 1840 were engaged in hosiery manufacture. The rate of infant mortality from diarrhœa and atrophy in Leicester was excessively high, viz., 54·5 and 50·7 per 1000 births.

Infant mortality was lowest in Portsmouth, and the death-rate from *each* of the eleven causes in this town was lower than the mean for the fifteen towns, except from teething, the mortality from which was the same as the mean; from diarrhœa, and from tubercular diseases, the mortality exceeded the mean.

In Liverpool, the death-rate from lung diseases was excessive, 39·4 per 1000, or 10·1 per 1000 above the mean. The mortality from lung diseases was also very high in Sheffield, Oldham, Leeds, London, Manchester, and Wolverhampton.

The high mortality from suffocation in Birmingham and Liverpool demands the attention of the coroners.

In the factory towns of Nottingham, Leeds, Leicester, and Oldham, the mortality from premature birth was excessively high.

In table J. (cols. 6, 7, and 8) the death-rates from each of the eleven causes in these seven textile manufacturing towns in the aggregate, are compared with those in London, and the results indicate in a striking manner that—over and above a certain proportion of the mortality which may be attributable to indifferent sanitary arrangements—the causes most fatal to infant life in factory towns, and which are inseparable from bad nursing and feeding, are diarrhœa, convulsions, and atrophy. The mortality from premature birth was also in excess. Thus the respective death-rates of infants in London, and in the seven factory towns were, from diarrhœa 20·4 and 31·9, from convulsions 18·5 and 27·4, from atrophy 20·5 and 40·9, from premature birth 10·4 and 13·8 per 1000.

The death-rates in the seven factory towns from whooping-cough, teething, lung diseases, tubercular diseases, and suffocation, were lower than those in London.

*Death-rates of illegitimate infants.**—In the 5 years 1871-5, infant mortality was excessively high in the districts of Leicester, Liverpool, and Preston, where the respective rates were 229, 223, and 222 per 1000, and as the death-rate among illegitimate infants is known to be higher than

TABLE L.—DEATH-RATES OF LEGITIMATE, and of ILLEGITIMATE INFANTS; Proportions per cent. of MARRIAGE of MINORS to TOTAL MARRIAGES, and NUMBERS of ILLEGITIMATE BIRTHS to every 1000 BIRTHS, in each of twenty-four districts of ENGLAND, 1871-5.

* For some useful statistics on this subject, see an interesting and instructive pamphlet on Infant Mortality by Dr. Sutton, the Medical Officer of Health for Oldham, who acknowledges the services of Mr. N. A. Humphreys of this office, in furnishing much valuable statistical information. Published by Messrs. Knight and Co., Fleet-street.

it is among legitimate infants, it was believed that the rate of illegitimacy in 1871-5 (the number of children born out of wedlock to every 1000 births) would bear some relation to infant mortality, but such is not the case, the rate of illegitimacy in Leicester and in Liverpool being 44 per 1000, while in Preston it was 71 per 1000.

The results in Table L. show that the rate of illegitimacy bears no relation to the death-rate of infants, and it is remarkable that the districts with a high rate of infant mortality are generally those with a comparatively low rate of illegitimacy, and *vice versâ*. Thus in the twelve urban districts with a high mean death-rate among infants, in 1871-5, of 190 per 1000, the rate of illegitimacy was 61 per 1000, while in the twelve rural districts, with a comparatively low mean death-rate among infants of 110 per 1000, the rate of illegitimacy was 77 per 1000.

It is not improbable that a certain number of illegitimate children are registered as legitimate in towns, while in the country they are correctly registered as illegitimate, the circumstances connected with their birth being too well known to allow of any false representation being made: some illegitimate births have no doubt escaped registration altogether.

For each of the 24 districts in the Table, I have caused the number of *deaths of illegitimate infants* to be abstracted from the death registers for the year 1875. The results are instructive; and I hope at some future time to publish similar facts for each of the 631 registration districts in England and Wales.

Twenty-four *districts* have been selected as examples, out of 631, viz., twelve with a high rate of infant mortality, and twelve with a comparatively low rate. Had a selection been made from the 2194 *sub-districts*, it is probable that death-rates could have been reviewed exceeding even those in Leicester, Liverpool, and Preston.

Turning to these results (Table L.) it will be seen that the death-rate, in 1875, among illegitimate infants in Liverpool, was 418 per 1000, and in Preston 448 per 1000; double the rates among legitimate infants, which were 205 and 214 respectively. The mean death-rates in the twelve urban districts, among the legitimate, and illegitimate, were 192 and 388 respectively.

These striking results partly explain how it is that the reduction in the death-rates, in some localities, has, apparently, not been in proportion to the skill and money which have been expended in sanitary measures. It is lamentable to reflect that the neglect of the requirements of infant life, which, for various reasons, is chiefly confined to children born out of wedlock, is allowed to go on year after year producing such fatal results.

Until some stringent legislative measures are adopted to protect the lives of this class of infants, it is to be feared that these truly "unnatural deaths" will continue to be counted by thousands.

In the urban district of Radford the mortality among legitimate infants was 187 per 1000, whereas among the illegitimate it was 547 per 1000! or nearly three times as high, and in Driffield the respective rates were 168 and 596 per 1000!

In the rural districts, where the death-rates of infants were not so high, the mean mortality of the illegitimate was rather more than double that of the legitimate. The mean death-rates in the twelve rural districts, in the year 1875, were 97 per 1000 among the legitimate, and 239 per 1000 among the illegitimate. In Kendal the mortality among legitimate infants was only 91 per 1000, while among illegitimate infants it was 329 per 1000, or nearly four times as high; and in Stratford-on-Avon the respective rates were 69 and 293 per 1000.

It will be observed in the Table that in the districts where there was an excess of early marriages, and where, in consequence, there was much neglect and mismanagement of infants by inexperienced young girls who had become mothers, the mortality of infants born in wedlock was com-

paratively high. Thus the mean infant mortality in the twelve urban districts, in the year 1875, was 192 per 1000, and the mean proportion of girls who married under age to 100 marriages in these districts was 28, whereas in the twelve rural districts, where the mean infant mortality was 97 per 1000, the proportion was only 18.

Dr. Russell, the Medical Health Officer of the city of Glasgow, has obligingly furnished me with particulars, relating to the death-rate among legitimate and illegitimate infants for that city, which I subjoin, and which confirm the results observed in the 24 districts in England.

MORTALITY OF LEGITIMATE and ILLEGITIMATE INFANTS in the CITY OF GLASGOW, 1873-5.

YEARS.	LEGITIMATE INFANTS.		ILLEGITIMATE INFANTS.		DEATHS	
	Births.	Deaths under 1 year.	Births.	Deaths under 1 year.	Of Legitimate Infants to every 1000 Legitimate Births.	Of Illegitimate Infants to every 1000 Illegitimate Births.
1873	18,416	2,845	1,786	523	154	293
1874	19,178	2,863	1,785	495	149	277
1875	19,104	2,905	1,714	491	152	286
1873-5	56,698	8,613	5,285	1,509	152	286

The number of legitimate births in England and Wales, in 1875, was 809,794 : the number of illegitimate births was 40,813, so the total number of children born was 850,607, and the mortality in their first year of age was 158 per 1000.

Since it has been ascertained that the mortality among illegitimate infants is about double that among the legitimate, then from the mean proportions observed in the twelve urban and in the twelve rural districts, it follows that the lives of 7020 illegitimate infants were sacrificed through neglect and improper food in the year 1875. This is on the assumption that the death-rate among illegitimate infants should be the same as that which prevailed among legitimate infants, viz., 148 per 1000.

But the general death-rate of infants, instead of being 158 per 1000, should at least be as low as that in some of the healthiest parts of England. By the healthy district life table it was only 111 per 1000, and in Table M. I have published for the first time some interesting results showing the death-rate of infants *at each month under one year of age* in the healthy districts of England, and in Liverpool. If 111 per 1000 be taken as a standard rate, for the present, which is 47 per 1000 less than the rate for all England, then no less than 40,197 deaths of infants occurred in 1875, in excess of the number which would have been registered at the rate which prevailed in the healthy districts.

Mortality of Infants at each Month of Age.—According to the Life Table M., of 100,000 children born in the healthy districts of England, 96,339 are alive at the end of the first month, 3661 having died in the interval. Of the same number born in Liverpool, only 94,551 are alive at the end of the first month, 5449 having died in the interval.

At the end of the second month, 95,178 are alive in the healthy districts, 161 having died that month ; in Liverpool 92,088 are living, 2463 having died that month ; and so on until at the age of seven months the numbers living are reduced to 91,932 in the healthy districts, and to 84,373 in Liverpool.

In the healthy districts, the mortality rapidly decreases, month by month. Thus the rate was 448 per 1000 living under one month of age, 145 at one month of age, 102 at two months, 76 at five months, 71 at six months, and 53 at 11 months of age.

In Liverpool the mortality was 672 per 1000 under one month of age, 317 at one month, 227 at two months, and 204 at five months, after which age, the mortality, instead of decreasing, as in the healthy districts, increases to 205 at six months, 216 at eight months, 242 at ten months, and 260 at eleven months of age.

So unfavourable to infant life are the unsanitary conditions of large towns—especially Liverpool—that not only is the mortality at some months of age, twice as high as it is in the healthy districts, but at 7 months of age and upwards it is three times as high. The mortality of infants by lung diseases is higher in Liverpool than in any other large town.

The mortality of children under one year of age is 111 per 1000 in the healthy districts of England, and 229 in Liverpool, but the rate at each month of age differs considerably, decreasing rapidly from birth, as will be seen by reference to Table M.

The subjoined Table N. shows in a striking manner how much depends, at the starting point of life, whether infants breathe the poisoned air of large towns, or the fresh pure atmosphere of healthy districts.

Thus in Liverpool the mortality of children under one year of age was at the rate of 229 deaths per 1000, 53 of which deaths were of infants under one month of age, 24 of one month of age, and so on for each month of age in the Table.

In the healthy districts the mortality of children under one year of age was at the rate of 111 deaths per 1000, 39 of which deaths were of infants under one month of age, and 13 of one month of age.

TABLE M.—LIFE TABLE for EACH MONTH of the FIRST YEAR of AGE, and ANNUAL RATE OF MORTALITY per cent. of CHILDREN at EACH MONTH UNDER ONE YEAR of AGE (1) in the HEALTHY DISTRICTS of ENGLAND AND WALES; (2) in ENGLAND AND WALES generally; and (3) in the DISTRICT of LIVERPOOL.

NOTE.—By moving the decimal one place to the right in each of the last three columns, the results will represent the annual rate of mortality per 1000.

* See Supplement to Registrar General's 25th Annual Report, p. vii.

The difference, therefore, in the rate of mortality of children under one year of age in Liverpool, and in the healthy districts, was 118, of which, 14 were by deaths under one month of age, 8 by deaths at two months of age, and so on.

Deaths of illegitimate infants from different causes.—In the districts of Driffield and Preston the death-rate of illegitimate infants was excessively high. The subjoined Table O. shows the mortality in 1875 in these two districts, from each of 11 causes of death, among *legitimate* and *illegitimate* infants.

In Driffield, the death-rate from all causes among legitimate infants was 168 per 1000, whereas among the illegitimate it was 596 per 1000. A

			NUMBER of DEATHS UNDER ONE YEAR OF AGE in the Year 1875 to every 1000 BIRTHS REGISTERED.												
Driffield	Legitimate -	1000	167·5	134·7	3·5	1·7	1·7	—	15·5	24·2	31·1	5·2	20·7	29·4	1·7
	Illegitimate -	1000	596·5	473·7	—	—	17·5	—	122·8	35·1	70·3	52·6	140·4	35·1	—
Preston	Legitimate -	1000	213·5	187·7	1·7	0·9	8·1	5·2	45·0	34·1	39·6	10·2	24·7	18·2	—
	Illegitimate -	1000	447·6	390·5	3·2	—	19·0	9·5	104·8	47·6	50·8	12·7	69·9	66·7	6·3

reference to the table reveals the several assigned causes of death which have led to this sad result, the respective death-rates per 1000 of the legitimate and illegitimate being, from diarrhœa 16 and 123, from convulsions 24 and 35, lung diseases 31 and 70, tubercular diseases 5 and 53, atrophy 21 and 140, premature birth 29 and 35.

In Preston, the death-rate from all causes among legitimate infants was 214, among illegitimate 448 per 1000. The respective death-rates per 1000 of the legitimate and illegitimate were, from diarrhœa 45 and 105, from convulsions 34 and 48, lung diseases 40 and 51, tubercular diseases 10 and 13, atrophy 25 and 70, and premature birth 18 and 67.

Dr. Russell, the Medical Officer of Health for Glasgow, in an inquiry into the mode of nursing legitimate and illegitimate children in that city, collected some interesting results, extending over a period of six months. He found that of 100 legitimate infants who died, 63 had had the breast, 24 had been fed wholly by bottle, and 13 had been partially suckled; while of 100 illegitimate infants who died, only 14 had been wholly suckled, 56 having been fed by bottle, and 30 only partially suckled.

Of 100 LEGITIMATE and of 100 ILLEGITIMATE INFANTS WHO DIED IN GLASGOW, the PROPORTIONAL NUMBERS SUCKLED WHOLLY OR IN PART.

—	TOTAL DEATHS.	Wholly suckled.	Wholly unsuckled.	Partly suckled.
Legitimate - - -	100	63	24	13
Illegitimate - - -	100	14	56	30

These facts partly explain why the mortality among illegitimate infants in Glasgow is nearly double that among legitimate infants.

Dr. Parsons, the Medical Officer of Health for Goole, is of opinion that many deaths of infants are attributable to artificial feeding. During the latter part of 1875, his attention was specially directed to this subject, and he found that of 70 infants who had died, 26 had been hand-fed, and only 15 had been suckled; in the remaining 29 cases, the results were not ascertained, or the infant lived but a few days or hours. Very few of those who died from diarrhœa, or marasmus, had been suckled, and in the majority of such cases it was ascertained that the mother had been in the habit of going out to work. He states that “almost all the deaths from “diarrhœa, and marasmus, occurred at the end of the summer, and “autumn, that is, at the season of the year when many mothers were out “at work, and when decomposition proceeded most rapidly.”

Children under five years of age.—The subjoined Table (P.) shows the mortality of children under five years of age in sixteen large towns in each of the three years 1873–5.

Arranging the towns in the order of their mortality in the year 1875, Salford heads the list with the highest death-rate of 107 per 1000 living at that age; then Nottingham 106, Bradford 103, Leicester 100, Birmingham 93, Leeds 93, Manchester 91, Oldham 91, Liverpool 89, Norwich 85, Newcastle-upon-Tyne 82, Sheffield 80, London 78, Sunderland 74, Wolverhampton 70, and Portsmouth 56.

Norwich is the only textile manufacturing town with a comparatively low death-rate at this period of age.

Portsmouth stands out prominently with the lowest rate, but this town has the lowest death-rate at all ages, of any of the large towns. This is probably owing, in some measure, to the presence of a large number of military and naval men, and dockyard artificers, representing several

thousands of selected healthy lives. The dockyard affords employment to a large number of artizans, and there is not that inducement in Portsmouth for mothers to neglect their offspring as there is in the factory towns. The temperature of Portsmouth is warm and equable, and the mortality from lung diseases is comparatively low.

Deaths in Public Institutions.—According to the reports of the medical officers of health more hospitals—especially for infectious diseases—are needed for the sick and suffering in various parts of England and Wales to meet the requirements of increasing populations, and of the improved sanitation of the country.

The number of hospitals increased from 544 in 1874, to 582 in 1875, showing an increase of 38 during the year, of which 14 were described as cottage hospitals. The abstracts relating to Public Institutions* show the number of deaths registered in each registration division and county, and in each district and sub-district, in the year 1875. The total deaths registered in England and Wales amounted to 546,453, out of which number 48,154, or 8·8 per cent., occurred in 1380 of the public institutions of England and Wales. Of these 48,154 deaths, 30,674, or 63·7 per cent. occurred in 715 workhouses, workhouse infirmaries, or workhouse schools, 12,548, or 26·1 per cent. in 582 hospitals or infirmaries, and 4932, or 10·2 per cent. in 83 lunatic asylums. Only those deaths registered in workhouses, hospitals, infirmaries, and public lunatic asylums are published, inasmuch as the mortality of the respective sub-districts in which they are situated is disturbed principally by these three classes of institutions.

The number of deaths registered in workhouses in 1875 was 30,674. The average number of in-door paupers relieved on the last day of each week, was 135,041, consequently the mortality was at the rate of 227 per 1000.

NOTE.—The deaths of children under five years of age in fifteen of the above towns were supplied by the Medical Officers of Health.

* See pp. 99—119.

The abstracts of Deaths registered in these public institutions situate in the several districts and sub-districts afford the means of correcting the mortality, which in some districts is unduly raised owing to the number of deaths registered in hospitals and other large institutions within their limits.*

A reprint of the table published in my annual summary for 1875, showing the number of deaths registered in *all* public institutions of London, is appended to this report.† In the 52 weeks of that year 13,946 deaths were registered in 166 public institutions. Of every 1000 of these deaths, 574 occurred in fifty-four workhouses, 6 occurred in twelve prisons, 7 in two military asylums, 317 in thirty-eight general hospitals, 31 in thirty-seven hospitals for special diseases, 5, viz., 1 woman and 4 children, in five lying-in hospitals, 17 in five military and naval hospitals, 9 in three hospitals for foreigners, and 34 in ten lunatic asylums.

PROGRESS OF REGISTRATION.

Names on the Registers and Searches.—The names of 1,799,484 persons, whose marriages, births, and deaths were recorded in the registers during the year 1875, were inscribed in the printed alphabetical indexes deposited at this office.

The records, for the convenience of public reference, extend from the middle of the year 1837 to the end of 1875, and comprehend an aggregate number of names amounting to 54,078,318.

The annexed results show how rapidly the annual number of searches at this office is increasing. They are exclusive of searches in non-parochial registers, and of searches for purposes connected with the Factory Acts.

—	Total Number of Searches.	Average Annual Number.	—	Number of Searches to every 100,000 Names on the Books.
In the years 1845-9 -	4,758	952	In the year 1845 -	8.0
„ 1850-4 -	8,344	1,669	„ 1850 -	7.9
„ 1855-9 -	17,425	3,485	„ 1855 -	11.1
„ 1860-4 -	35,127	7,025	„ 1860 -	19.1
„ 1865-9 -	56,544	11,309	„ 1865 -	24.2
„ 1870-4 -	91,458	18,292	„ 1870 -	33.7
In the year 1875 -	25,407	25,407	„ 1875 -	47.0

The provisions of the Registration Act are becoming more generally known by the legal profession, and increasing numbers of certificates are required for proof of death, as well as for pedigree purposes. A considerable number of applications for birth certificates are made by candidates for civil service clerkships, for boys about to be apprenticed, and for boys about to be employed as messengers, &c. for post office purposes.

Of the 25,407 searches in 1875, certificates were issued in 19,639 instances, namely, 8826 registration certificates of births, 7979 of deaths, and 2834 of marriages.

The total number of searches in 1875 (including those relating to the non-parochial and other records) was 26,356, and the number of certificates issued was 20,283.

The amount received as fees and paid into Her Majesty's Exchequer for searches and certificates in the year 1875 was 3,879*l.* 15*s.* 6*d.*

For a complete list of all the various public registers and records in my custody, I refer to my 34th Annual Report, pp. xxi-ii.

* See introductory note, p. 99.

† See preliminary Tables, No. 39.

UNITED KINGDOM.

The population of the United Kingdom estimated to the middle of the year 1875 was 32,749,167. It has been supposed that the mortality of the United Kingdom would be increased by including the strength and deaths of the portions of the army, navy, and merchant seamen abroad, but the mortality of the United Kingdom in 1875, *including* the army, navy, and merchant seamen abroad, was 22·1, whereas the mortality of the general population—excluding that portion of the army, navy, and merchant seamen abroad—was 22·2 per 1000.

The number of native emigrants who left Ireland in 1875 was 51,462, which is the lowest number recorded since the collection of the emigration returns commenced in 1851.

The estimated population of Ireland in 1875 was 5,309,494. The number of births registered in Ireland in 1875 was only 138,320, or 26·1 per 1000 of population, the number of deaths registered was but 98,114, or 18·5 per 1000. Only 24,037 marriages were returned, which would make the marriage rate (the number of persons married to 1000 of population) 9·1.

In the 12th Annual Report of marriages, births, and deaths, for Ireland, relating to the abstracts of 1875, Dr. Burke, the Registrar-General, states that these comparatively low rates are not altogether the result of defective registration. As regards marriages, although—through the neglect of the clergy*—the numbers unregistered are still numerous, there is a large annual emigration of adult unmarried persons from Ireland, and the Census returns of 1871 show that the proportion per cent. of unmarried men, aged 20 years and upwards, to the total numbers living at those ages (27·1) is considerably lower than the proportional number (38·3) in England.

With reference to births, their registration is not so defective as was supposed. According to the Census returns of 1871, the proportion per cent. of married women, aged 15 and under 55, to the female population living at all ages was much lower in Ireland (23·0) than in England (28·7); so that, assuming the births to be in the same ratio to the number of married women in each of these two portions of the United Kingdom, the number of legitimate births in Ireland must necessarily be less than the number in England.

While the average annual number of legitimate births in England to every 1000 women aged 15 and under 55 is 224, in Ireland the proportional number is 223.

To render the registration of deaths perfect in Ireland, Dr. Burke recommends that a notification of the death should be required to be given to the registrar previously to interment. The registration of births and deaths in Ireland is compulsory, but the law has not hitherto been enforced.†

TABLE Q.—NUMBER of EMIGRANTS, NATIVES of IRELAND, who left the COUNTRY in each Year from 1851 to 1875.

Years.	Total.	Years.	Total.	Years.	Total.	Years.	Total.	Years.	Total.
1851*	152,060	1856	90,781	1861	64,292	1866	99,467	1871	71,240
1852	190,322	1857	95,081	1862	70,117	1867	80,624	1872	78,102
1853	173,148	1858	64,337	1863	117,229	1868	61,018	1873	90,149
1854	140,555	1859	80,599	1864	114,169	1869	66,568	1874	73,184
1855	91,914	1860	84,621	1865	101,497	1870	74,855	1875	51,462

* From the 1st of May, the date at which the collection of these returns commenced.

* See twelfth detailed Annual Report of the Registrar General of Ireland, p. 31.

† According to section 60. chap. 11. of 26 & 27 Vict. "Any person required by this Act who shall, within the period specified by this Act, fail to give notice of any birth or death to the registrar of the district within which such birth or death shall have occurred, shall be liable to a penalty not exceeding twenty shillings."

The estimated population of Scotland in 1875 was 3,495,214. The registration of births is now compulsory in England and Scotland, and the birth-rates are almost alike, being 35·5 per 1000 in England, and 35·4 in Scotland. In the mortality the disparity was greater, the death-rate of England being 22·8, while that of Scotland was 23·4 per 1000. The marriage rates, owing to the difference in the marriage law in Scotland as to registration, differed considerably; they were respectively 16·8 in England, and 14·8 in Scotland.

MORTALITY OF THE ARMY.

No certified copies of the particulars of the deaths in the Army abroad are received at this office, but His Royal Highness the Field Marshal Commanding-in-Chief has favoured me with returns, distinguishing the numbers who died in Great Britain, Ireland, and abroad.

The average strength of the Army at home and abroad in the year 1875 was 184,669, or 38,170 less than in 1862, and the number of deaths was 2269; so the rate of mortality was 12·3 per 1000 of strength, or 0·8 per 1000 above the rate in 1874.

The average strength of the Army at home was 97,193, and the deaths were 1061: the rate of mortality per 1000 strength was 11·8 among officers, and 10·9 among non-commissioned officers and men, the average annual rates in the 14 years 1861–74 being 9·7 and 11·1 respectively, so the mortality among officers serving at home in 1875 was 2·1 per 1000 above the average, while that of the non-commissioned officers and men serving at home was ·2 per 1000 below the average.

The average strength of the army abroad was 87,476, and the deaths were 1208. The rate of mortality per 1000 of strength was 15·2 among officers, and 13·7 among non-commissioned officers and men, against an average annual rate in the 14 years 1861–74 of 13·9 and 18·4 respectively. The mortality among officers serving abroad in 1875 was, therefore, 1·3 per 1000 above the average, while that of non-commissioned officers and men serving abroad was 4·7 per 1000 below the average.

Thirty-eight per cent. of the British Army were stationed in England and Wales, 2 per cent. in Scotland, 13 per cent. in Ireland, and 47 per cent. abroad.

MORTALITY OF THE NAVY.

Dr. Mackay, the Deputy Inspector-General of the Royal Navy, reporting to Sir A. Armstrong, K.C.B., M.D., the Director-General of the Medical Department, on the sanitary condition of the service afloat in the year 1875, states that it was satisfactory.

The total force in the service afloat was 44,360; the deaths were 392, so the mortality was 8·8 per 1000 force.

Compared with the preceding year there was a decrease in the mortality of ·7 per 1000; in the cases of disease and injury of 37·4 per 1000, and of invaliding of 4·8 per 1000.

Compared with the average for 12 years there was a decrease in the death-rate of 1·9 per 1000, and in the cases placed on the sick list of 93·1 per 1000. In the ratio of invaliding there was an increase of ·3 per 1000.

A comparison of the death-rates at the different stations shows that the greatest increase in the mortality occurred on the Australian station, where there was an outbreak of enteric fever, which resulted in 41 cases and 3 deaths,* and the greatest reduction was on the south-east coast of the American station.

* For an interesting account of the disastrous outbreak of measles in the Fiji Islands, where the disease was supposed to have been imported by one of the ships of the squadron, see Statistical Report of the Health of the Navy, 1875, pp. 313–317.

The number of deaths in the total force from disease was 307, and from wounds, injuries, and drowning 85. The death-rate from disease alone was 6·9, and from violence, including drowning, 1·9 per 1000, against 6·8 and 2·7, respectively, in 1874.

Of the 307 deaths from disease, 19 were referred to enteric fever, 9 to simple continued fever, and 4 to yellow fever, 9 to remittent fever, 8 to cholera, 49 to consumption, 36 to heart diseases, 15 to aneurism, 32 to pneumonia, 10 to dysentery, 10 to stomach diseases, 5 to kidney diseases, and 3 to delirium tremens and alcohol. In every 100 deaths 22·4 were from drowning and other violence.

Of 100 deaths at all ages, thirty-nine were aged 15–25, thirty-four were aged 25–35, twenty-two were aged 35–45, and five were aged 45 years and upwards.

The mean force employed on the *home* station was 21,600, and the deaths were 161, being in the proportion of 7·5 per 1000, against 7·8 in the previous year. The mortality from disease on this station was 6·3 per 1000 force, from violence 1·2 per 1000; against 5·7 and 2·1 in the previous year.

108 cases of simple diarrhœa, 33 cases of cholera simplex, and five cases of malignant cholera, of which three proved fatal, occurred on board the “Glasgow” on the East India station. It appears that the disease was brought on board by a marine who had returned from Calcutta after two days leave, “the usual incubative interval,” and who died in about nine hours. A sharp outbreak of choleraic as well as of simple diarrhœa, was suddenly developed, which only ceased three days after the ship had cleared out from the morbid influences of the river Hooghly, and those of the native portion of the city of Calcutta. The five men who suffered from malignant symptoms had been on shore, but it is believed that the germs of the contagion were conveyed on board from the river or shore close to the ship.

Cases of simple continued fever, of ague, and of remittent fever were rather frequent on this station.

TABLE R.—Showing the MORTALITY in the ROYAL NAVY at the different STATIONS during the Years 1874 and 1875.

* Including the deaths by the loss of Her Majesty's ship “Captain.”
† Including the deaths by the loss of Her Majesty's ship “Bombay.”

Three fatal cases of cholera occurred in the irregular force, one on board the "Doris" at Calcutta, one on board the "Jumna" at Bombay, and one on board the "Serapis" on the 27th December. On the 23rd December His Royal Highness the Prince of Wales and suite disembarked at Prinsep's Ghaut, and on the 24th December the "Serapis" was moved nearer the town of Calcutta. Cholera was prevalent among the shipping in the harbour. When a case of cholera occurred on board, and some others of choleraic diarrhoea, such excellent sanitary measures were adopted in this roomy and well ventilated vessel that the disease did not spread, though up to the 31st December, bowel complaints were of frequent occurrence.

BIRTHS AND DEATHS OF BRITISH SUBJECTS AT SEA.

Marine Register Book.—Before the Registration Act of 1874 came into operation, the law relating to the registration of births and deaths of English subjects at sea was virtually inoperative, but the provision of this Act will ensure more perfect records.

By this Act commanding officers of British ships not in Her Majesty's service (and commanding officers of foreign vessels trading to or from any port of the United Kingdom) are compelled, under a penalty, to transmit returns of *all* births and deaths occurring on board, to the Registrar-General of Shipping and Seamen, who has to send a certified copy of such particulars to me. Commanding officers of Her Majesty's ships are to forward returns of all births and deaths occurring on board, *direct* to me.

The certified copies of these returns of births and deaths of English subjects on board merchant vessels at sea, as well as those reported to me by commanding officers of Her Majesty's ships are entered in a book kept

NOTE.—In the above Table some of the deaths on board colonial and fishing vessels are included, whereas the strength relates only to the registered vessels of the United Kingdom.

* The numbers of deaths in the above Table are not those which actually occurred during each year, but represent those "reported" in each year.

† Including the deaths by the loss of Her Majesty's ships "Captain" and "Slaney."

for the purpose at this office called the Marine Register Book. The numbers recorded in the year 1875 were 484 births and 3009 deaths.

357 births of children and 786 deaths (including 4 of soldiers, marines, or seamen from the Royal Navy) occurred among *passengers* on board merchant vessels at sea.

Mercantile Marine.—The number of mariners at sea, exclusive of masters, in registered vessels, in the year 1875 as reported by the Registrar-General of Shipping and Seamen, was 199,667. The deaths (including some of those which occurred on board colonial and fishing vessels) were 4076, and the rate of mortality was 20·4 per 1000 of the registered strength. The average annual mortality in the 24 years 1852–75, was 21·5.

The number of mariners in the merchant service, exclusive of masters, whose deaths were referred to *drowning*, are shown in Table S., together with the mortality by *drowning* in the Royal Navy in each of the years 1866–75.

In the 9 years 1866–74, 24,607 lives were lost in the merchant service by drowning; 15,063 by wreck, and 9544 by accident: the average annual number drowned in those years was 2734 or 13·7 per 1000 strength. The proportional number lost by wreck was 8·4 and by accident 5·3 per 1000.

WILLS.

Mr. Leslie in his annual report of Judicial Statistics for 1875, publishes a return from the Senior Registrar of the Court of Probate, showing that the number of probates and administrations granted at the Principal Registry during the year was 15,252. The value of the effects was sworn under 61,876,758*l*.

The returns furnished by the district Probate Registrars record the number of probates and letters of administration granted in the 40 district registries during the year as 25,142. The value of the property under which these probates and administrations were sworn was 50,724,522*l*.

The results for the Principal and District Registries combined were—probates and administrations 40,394—value of effects sworn under 112,601,280*l*. The average value of each was 2788*l*. against 2776*l*. in the previous year. The proportion of the cases in which people above

^a Excluding the Caucassian provinces, but including Poland and Finland.

^b The estimated population of Finland in 1872 was 1,838,473.

^c Exclusive of the Sea of Azof, comprising 36,822 square kilometers.

^d Including Hungarian countries, the enumerated population of which in 1869 was 15,417,327, viz., 7,653,560 males and 7,763,767 females.

^e Including 4,405 square kilometers of foreshore.

^f Including the Azores, the area of which is 2,368 square kilometers, and the population of which in 1871 was 260,072.

^g Estimated populations.

^h Including 950 military.

These numbers for Turkey in Europe have been estimated by M. Vladimir Jakschitj.

* A square kilometer is a square area of 1,000 meters to the side; a square kilometer also equals ·3861162 of a square mile.

A useful result of the labours of the International Statistical Congress has just appeared in a report showing the population of the several countries of Europe according to recent returns.

The instructive tables in this report have been compiled by Dr. Berg of the Swedish Central Bureau of Statistics, in conformity with the recommendations of the Congress, the different countries being arranged in the order determined by a resolution of the Statistical Congress held at St. Petersburg in 1873.

The results in Table U. show that the population of Europe according to the most recent *Censuses* was 299,164,059, whereof 147,917,681 were males, and 151,246,378 were females, so to every 100 males in Europe there were 102 females.

The official *estimates* received from the different countries by Dr. Berg in 1871-2, make the population of Europe 301,850,180, and by more recent returns, published in Dr. Petermann's "*Mittheilungen*," the population of Europe is estimated at 309,178,317. See Table U.

As regards the population of Turkey, an estimate has been made by a good authority on the subject, M. Vladimir Jakschitj, the director of the statistical department of the Servian Administration. His estimate of the numbers in each of the creeds in the vilayets or provinces of Turkey in Europe in 1864 is as follows :*

TABLE V.—ESTIMATED POPULATION OF TURKEY IN EUROPE.

Vilayets or Provinces.	Total Population.	Christians.	Mahometans.	Jews.
Constantinople . . .	327,750	121,267	183,540	22,943
Adrianople	1,349,894	814,742	522,135	13,017
Danube	2,302,550	1,380,799	911,280	10,471
Salonica	649,345	334,873	302,972	11,500
Janina	717,306	472,574	241,062	3,670
Bitolia (Monastir) . .	1,240,421	494,159	742,270	3,992
Scutari	171,539	89,491	82,048	—
Bosnia	1,151,972	708,297	437,377	6,298
Herzegovina	185,421	142,128	43,219	74
Crete	275,153	234,113	37,840	3,200
Army	82,539	—	82,539	—
Navy	23,324	—	23,324	—
TURKEY IN EUROPE .	8,477,214	4,792,443	3,609,606	75,165

The results in the foregoing Table are exclusive of tributary states. The population of the Turkish Empire, including her Asiatic and African dependencies, is estimated by Herr Behm and Dr. Wagner to be 48,466,577, of which 15,140,068 belong to Europe, and 33,326,509 to Asia and to Africa.

* From Dr. Petermann's "*Mittheilungen*," Supplement to 1876, entitled "*Die Bevölkerung der Erde*," by E. Behm and Dr. H. Wagner. The islands of Samothraki, Imbros, Lemnos, and Hagios-Strati, which, for administrative purposes, are reckoned to belong to Asia, but which according to geographical position belong to European Turkey, comprise a population of 29,674, which if added to the above 8,477,214 make the estimated population of Turkey in Europe 8,506,888.

The estimated population of the Russian Empire, according to the same authorities, is 86,586,147, of which 73,613,602 belong to Europe, and 12,972,545 to Asia.

The estimated population of the seven Great Powers of Europe, including the Asiatic provinces of Russia, the Asiatic provinces and African possessions of Turkey; and the Colonies, or foreign tributary States belonging to the British Empire and to France, is 521,430,032, or more than a third of the estimated population of the entire globe.

Arranging the seven Great Powers in the order of their population the British Empire stands first with 236,371,371, including 191,307,070 in British India, and 11,826,224 in other colonies and possessions. Second

* From Dr. Petermann's "*Mittheilungen*," Supplement to 1876, entitled "*Die Bevölkerung der Erde*," by E. Behm and Dr. H. Wagner.

THE MEAN FUTURE LIFETIME OF MEN AND WOMEN, MARRIED AND UNMARRIED.

The English registration schedule distinguishes the deaths of married women, from those of spinsters, but does not distinguish the deaths of married men from those of bachelors.

No abstracts of the ages at death of married, and of unmarried women have yet been made for England.

Some interesting results have, however, been published in the Annual Reports of the Registrar-General of Scotland showing the mortality of married and of unmarried men and women at every fifth year of age, and the *mean age at death* of married and of unmarried men of 20 years of age and upwards.*

The mean age at death of married men, as there determined, is 59·7 years; that of unmarried men, aged 20 years and upwards 40 years; showing a difference of 19·7 years of life in favour of married men, but these results have been obtained by multiplying the number of deaths at each of the quinquennial ages by the mean $\left(\frac{x+5}{2}\right)$ age and dividing the sum of these results (the number of years lived) by the number of deaths without reference to the ages of the living.

In all inquiries relating to the mean age at death, the actual numbers living at each age must be kept in view. Upon referring to the numbers out of which the deaths of the unmarried men occurred, it is found that the relative proportions differed considerably at different ages, the majority—81 per cent.—being under 40 years of age, the unmarried population containing a greater proportional number of young persons than the married.

The corrected mean age at death of the married and single represents *the mean ages at death of stationary populations enjoying the same advantages as regards health and longevity as those two distinct classes of the population of Scotland.*

A life table affords the only satisfactory measure of the relative duration of life. In it a population is assumed to be stationary; so the Table represents the progress of a generation through life without any disturbing elements.

By thus eliminating the causes of disturbance, the duration of life can be accurately measured, and the true mean age at death of the men in the unmarried state aged 20 years and upwards, in Scotland in 1863 is found to be 55 years instead of 40 years, so that the discrepancy here amounts to 15 years.

The mean future lifetime of married and of unmarried men and women in Scotland at the different ages in the annexed Table‡ has been deduced by means of the formula for constructing a Life Table by the short method given in the Registrar-General's Fifth Annual Report, pp. 362–7,† and to obtain the expectation of life the following formula was

used: $\frac{L_x}{l_x} - \cdot 5 = E_x$. The results show that the expectation of life among married men and women at the several ages, in Scotland, is rather higher than that of men and women of *all conditions* as determined by the English Life Table, but the difference is slight.

The married in the table include widowers and widows, and the effect of this is to lower the corrected mean age at death slightly.

The expectation of life among married men is greater than it is among unmarried men. At the age 20 the expectation of life among married men

* See Annual Reports of the Registrar-General of Scotland:—Eighth, page xxix; Ninth, pages xxix, xxx; Tenth, page xxxiii.

† By this method the excess in the expectation of Life is insignificant, being only ·01 to ·03 year at ages 15 to 50; at 60 it is ·06, at 70 it is ·10, and at 80 only ·27.

‡ See page lxiv.

is 40·8 years, while that of unmarried men of the same age is only 35·0. Thus bachelors do not live so long as married men. At age 25 the difference in favour of the married is 4·5 years, at age 30 it is 3·6 years, at 40 it is 2·4 years, and at 50 it is 1·7 years.

This is the mean future lifetime, to which, if at each age, the past lifetime (x) be added, the sum will represent the true *mean age at death*. Thus the future lifetime of married men in Scotland at the age 20 is 40·8 and $40\cdot8 + 20 = 60\cdot8 =$ the mean age at death. At age 25 the mean age at death of married men is 62·0, at age 40 it is 66·5, at age 50 it is 70·0.

The difference between the mean future lifetime of married and single women at marriageable ages is not so great as it is among men.

Thus the mean future lifetime of married women at age 15 is 45·1. Among the unmarried it is 45·0, showing that at this age the expectation of life is but slightly higher (·1 year) among married women than it is among unmarried. At age 20 the mean future lifetime is 41·9 among married women, and 41·5 among unmarried; the chances at this age, and at all subsequent ages in the table, with the single exception of age 75 (probably from insufficient data), being in favour of married women, but the difference does not exceed $\frac{9}{10}$ ths of a year at any age.

It is possible that the young unmarried men in Scotland lead less regular lives than married men.

F. J. WILLIAMS.

MEAN AFTERLIFETIME or EXPECTATION of LIFE and MEAN AGE at DEATH of MARRIED and of SINGLE MEN in the Two Years 1863-64, and of MARRIED and of SINGLE WOMEN in the Two Years 1861-62 in SCOTLAND.

REMARKS ON THE METEOROLOGY OF 1875.

BY JAMES GLAISHER, Esq., F.R.S., &c.

The year 1875 was remarkable for the destructive floods in July and October, and for the bitterly cold weather in February and March, and from the 20th of November to the 16th of December.

The following remarks with regard to excess or deficiency of atmospheric pressure, temperature, and rain-fall are primarily derived from the observations made about London, but they may be taken as applying generally to the whole country.

Atmospheric Pressure.—The readings of the barometer were above their averages from the 1st to the 9th of January, with the exception of the 4th, and they were alternately above and below from the 10th to the end of the month. In February the readings were high, and all above their average values from the 1st to the 22nd, except on one day, viz., the 12th, when the reading was 0·08 in. below the average; from the 23rd of February to the 9th of March the readings were all in defect of their averages; they were alternately above and below from the 10th to the 13th, and from the 14th of March to the end of the month the readings were all in excess of their averages; on the last three days they were no less than 0·51 in., 0·55 in., and 0·60 in. respectively in excess. From the 1st to the 8th of April the barometer readings were constantly above and below their average values; they were above from the 9th to the 20th, a little below on the two following days, and above from the 23rd to the end of the month. Throughout the month of May and till the 8th of June the readings were alternately above and below their averages for short periods; they were below from the 9th of June to the 17th, above on the 18th and 19th, below on the 20th and 21st, above on the four following days, and again below to the end of the month. During the month of July the readings of the barometer were as follow:—below their averages on the first three days; above on the following four days; below from the 8th to the 11th, a little in excess on the 12th and 13th; again below from the 14th to the 24th, and above from the 25th to the end of the month. In August the readings were above their respective averages from the 1st to the 8th (with the exception of the 6th, which was 0·02 in. below); they were below from the 9th to the 13th, above from the 14th to the 27th (with the exception of the 24th); a little below on the 28th and 29th; and a little in excess during the last two days of the month. From the 1st to the 18th of September the barometer readings were constantly above and below their averages; they were all below from the 19th to the 29th, and 0·06 in. above on the last day. From the 1st to the 10th of October the readings were alternately above and below their averages for two or three days together; they were then below from the 11th to the 23rd, and above from the 24th to the end of the month, with the exception of the 27th and 31st days, which were 0·18 in. and 0·03 in. below. The readings in November were in defect of their averages from the 1st to the 14th, and they were in excess from the 15th to the end of the month (with the exception of two days, viz., 19th and 30th, which were 0·24 in. and 0·04 in. in defect). From the 1st to the 4th of December the barometer readings were below their average values; from the 5th to the 16th they were above their averages; from the 17th to the 22nd they were below; and from the 23rd to the end of the year they were above. The highest reading in the year was 30·49 in. on January 30th, and the lowest reading 28·45 in. on November 11th, thus giving a range of 2·04 in.

Temperature.—The severe cold period which set in on 21st of November 1874 continued to the 1st of January 1875; this was followed by a very unusually warm period, beginning on the 2nd of January and ending on the 30th; the mean daily excess of temperature for these 29 days over the

average of 60 years was $6\frac{3}{4}^{\circ}$. On several days the excess over the average was as large as 10° , 11° , and 12° . On the last day of January another cold period set in, and continued very nearly to the end of March; the average daily deficiency for the 54 days ending 24th March was more than 3° daily, and during this time the wind was almost continuously E., or a compound of the E. In April the weather was mild till the 6th, when the temperature descended below its average, and it was cold till the 26th (with the exception of 18th, 19th, 20th, and 21st); the average deficiency from the 1st to the 26th was $1\frac{1}{2}^{\circ}$. On the 27th a warm period set in, and lasted, with few exceptions, till the 10th of June; the average excess of temperature for these 45 days was 3° daily.

From the 11th of June to the 5th of August the weather was cold, and the average deficiency of daily temperature for this period of 56 days was $3^{\circ}\cdot 1$. On the 6th of August a warm period set in, and with very slight exceptions continued till the end of September; the average excess of mean daily temperature for these 56 days was $3^{\circ}\cdot 2$.

The month of October was generally cold and wet, and the temperature was alternately above and below the average for several days together till the 2nd of November, and the average daily deficiency of temperature from 1st October to 2nd November (both days inclusive) was $1\frac{3}{4}^{\circ}$. The weather was warm from the 3rd till the 19th; the average daily excess of temperature for this period was 3° . On 20th November a bitterly cold period commenced and continued till 16th December, the average daily deficiency of temperature being $7\frac{1}{2}^{\circ}$; the temperature on 4th and 5th December was $14\frac{1}{2}^{\circ}$ below the average, and the average daily defect from 30th November to 7th December was 12° . During this cold weather the sky was almost always overcast, and a quantity of snow fell, the wind was N. and N.E., and the air was very cold. From the 17th of December to the end of the year the weather was mild, the wind S.W., and the daily excess of mean temperature was 6° nearly.

Taking into account the very severe cold weather from the 21st of November 1874 to the 1st of January 1875, then from the 31st of January to the end of March, notwithstanding the warmth of January, the winter of 1875 was one of unusual severity, and the weather again was very severe from the 20th of November to the 16th of December, with a long continuance of E. wind.

Rain-fall.—The fall of rain in January was 3·0 in., in February was 0·8 in., in March was 0·6 in., being 1·1 in. above the average in January, and 0·7 in., and 1·0 in. below in February and March. The fall in April was 1·6 in., being 0·1 in. below the average; in May it was 1·5 in., being 0·6 in. below the average; and in June it was 2·3 in., being 0·3 in. above the average. The total fall in the six months ending 30th June was 8·8 in., being 1·0 in. below the average. The fall of rain in July was excessive, viz. 5·3 in., being 2·7 in. above the average. Back to 1815 there have been only four Julys with falls so large.

The rain-fall in July greatly exceeded its average all over the country; the heaviest falls were generally experienced between the 13th and 23rd days, causing floods of great violence in Wales, and in the Midland Counties of England. The fall of rain on the 14th of July in Monmouthshire and Glamorganshire was no less than from 3 to 5 in., and in Hereford and Gloucestershire from 1 to 3 in.; in the Northern Counties little or no rain fell. The following are some of the heavy falls of rain, between the 13th and 23rd of July, at different stations:

On the 14th at Newport	the fall of rain was	5·30 in.	} In Monmouth.
„ 14th at Tintern Abbey	„	5·31 in.	
„ 14th at Cardiff	„	4·70 in.	} In Glamorgan.
„ 14th at Aberdare	„	3·85 in.	
„ 14th at Salisbury	„	2·25 in.	
„ 15th at Marlborough	„	2·32 in.	

NOTE.—On the 14th and 15th the North of England was almost free from rain.

On the 15th at Bristol	the fall of rain was	2.55 in.
„ 19th at Birmingham	„ „	2.25 in.
„ 20th at Wolverhampton	„ „	2.79 in.
„ 21st at Leicester	„ „	2.18 in.
„ 21st at Holkham	„ „	3.06 in.

The fall of rain in August was 2.3 in., being 0.1 in. below the average; in September the fall was 2.7 in., being 0.3 in. above the average. The total fall in the three months, viz., from 1st of July to 30th of September was 10.3 in., being 2.9 in. above the average. The beginning and middle of October was wet, and the fall of rain was in excess of the average, and again caused destructive floods in many places. At Leicester on the 9th of October $2\frac{1}{4}$ in. fell in ten hours. The fall in October was 4.1 in., exceeding the average by 1.3 in.; in November the fall was 2.9 in., exceeding the average by 0.6 in.; and in December the fall was 1.1 in., being 0.9 in. in defect of the average.

The total fall at Greenwich during the year was 28.2 in., being 3 in. above the average of 61 years. The total falls of rain in the year ranged from 48.55 in. at Allenheads, to 25.32 in. at Chiswick. The greatest numbers of rainy days in the year were 233 at Stonyhurst and Allenheads, and 231 at Bywell, and the least numbers were 143 at Brighton, and 151 at Salisbury.

Thunder storms occurred in the year at different parts of the country on 84 days, 62 of which occurred in the months of June, July, August, and September. No thunder storms were reported at any station in March, and but one only in each of the months of February and April.

Solar Halos were seen on 72 days during the year, The greatest number of days in one month was 10 in August, and the least 2 in May.

Lunar Halos were seen on 40 nights in the year, none of which were seen in April, July, or August; one in June, and 2 in September.

Auroræ Boreales were seen on 12 nights during the year. In January, February, May, June, and August, not one was seen at any station; it was seen on one night in March, viz., the 4th, at Cardington; 2 nights in April; 3 nights in July; one in September, viz., the 20th at Salisbury; one in October, viz., the 2nd, at both Weybridge Heath and Silloth; 2 nights in November, and twice in December.

Snow fell on 9 days in January, but mostly in the Northern Counties; on 21 days in February, and the fall was general all over the country; on 18 days in March, and on 4 days in April; on 2 days in October; on 20 different days in November all over the country; and on 11 days in December, or on 85 days during the year. The latest day in spring on which snow fell was April 22nd, and the first day it fell in the following autumn was October 12th.

Hail fell on 93 days during the year; the least number of days in any month was 2 in August, and the greatest 20 in November.

Fog prevailed on no less than 152 days in the year,—17 in January, 17 in February, 9 in March, 13 in April, 10 in May, 9 in June, 8 in July, 14 in August, 12 in September, 12 in October, 16 in November, and 15 in December.

The consecutive months between which the mean temperature of the air over the whole country was subjected to the greatest difference were: December 1874 to January 1875, when it was $+9^{\circ}.8$; January to February $-7^{\circ}.2$; April to May $+7^{\circ}.2$; September to October $-10^{\circ}.2$; and October to November $-7^{\circ}.0$.

The sign (+) denoting that the mean temperature of the second month was the higher, and the sign (—) denoting that it was of lower temperature.

PRELIMINARY TABLES.

TABLE 1.—Estimated **Population**, and Number of **Marriages**, **Births**, and **Deaths** registered in **England** in each of the Thirty-eight Years **1838–75**.

YEARS ended Dec. 31st	Estimated POPULATION in ENGLAND in the Middle of each Year.*	MARRIAGES.	PERSONS MARRIED.	BIRTHS (exclusive of Still-born).	DEATHS	EXCESS OF BIRTHS OVER DEATHS.
1838	15,287,699	118,067	236,134	463,787	342,760	121,027

1875 - -	16.8	35.5	22.8	60	28	44
Mean in 38 years	16.5	34.0	22.3	61	29	45

NOTE.—The Table may be read thus:—In the year 1838 to every 10,000 persons living there were 154 persons married, 303 births, and 224 deaths; the numbers of persons living to every person married, birth or death, were 65, 33, and 45 respectively. The rates in this Table have been calculated upon the estimated populations given in Table 1, but no corrections have been made for the difference between the ordinary year of 365 days and the leap year.

TABLE 3.—Marriages in England in each of the Thirty-five Years 1841–75;
those solemnised according to, and not according to, the Rites of the Established
Church; with other details respecting the Marriages in the Churches of the
Established Church.

1875 -	42,376	48,410	49,826	60,600	14·4	16·2	16·5	20·1
Mean Annual Rate per 1000 in each quarter during the 38 years					13·8	16·8	15·9	19·6

Note.—The three months January, February, and March contain 90 days, and in leap year 91 days; the three months April, May, and June 91 days; and each of the last two quarters of the year 92 days. For this inequality a correction has been made in the above calculations.

* These rates may thus be read without reference to the decimal points:—In the March quarter of 1838, to 10,000 persons living, 124 persons were married.

TABLE 7.—Marriages in England. The Proportion per Cent. of **Minors** of each Sex, of Males and Females who **signed the Register with Marks**, and of Persons who were **Widowers** or **Widows**, in each of the Thirty-five Years **1841-75**.

YEARS ended 31st December	TO 100 MARRIAGES.

Mean Annual Rate per 1000 in each Quarter during the 38 years					35·6	35·2	32·8	32·6

* These rates may thus be read without reference to the decimal points:—In the March quarter of 1838, to 10,000 persons living 303 births were registered. In the calculation of these rates a correction has been made for the varying number of days in the different quarters, see note to Table 5.

TABLE 15.—Proportional Number of Births in England in each Quarter to 1000 Births in the Average Quarter* of each of the Thirty-eight Years 1838-75.

YEARS.	NUMBER OF BIRTHS IN THE AVERAGE QUARTER.	PROPORTIONAL NUMBER OF BIRTHS.				
		In the AVERAGE QUARTER (assumed to be 1000).	FIRST QUARTER ending March 31.	SECOND QUARTER ending June 30.	THIRD QUARTER ending Sept. 30.	FOURTH QUARTER ending Dec. 31.

1875 -	11,656,400	12,288,059	24·2	21·5	107	113
Average proportion in 38 years, 1838–75 -			23·3	21·4	104	109

The Table may be read thus:—In the year 1838 to every 1000 males living there were 23·4 deaths; to every 1000 females living there were 21·5 deaths; and to each 100 females who died there were 105 deaths of males. The last column shows the *relative mortality of males and females*; and that out of equal numbers living the deaths of males were as 109 to every 100 deaths of females in 1838.

TABLE 20.—Deaths of 87 Persons (22 Males and 65 Females) RETURNED as Aged 100 Years and upwards in ENGLAND and WALES during the Year 1875.

Note.—The Table may thus be read :—Of each 1000 male children living under five years of age, 72·3 died in each of the 38 years 1838-75; in the five years 1841-45 this proportion averaged 69·0 per 1000; and in the five years 1871-75 it was 70·0.

* The population used in these calculations is deduced from the ascertained rates of increase observed in the 30 years 1841-71 (*see* Table 64), distributed in the several groups of age according to the proportions found to prevail at the last four Censuses.

Mean Annual Rate per 1000 in each Quarter during the 38 years					24·9	22·0	20·6	21·9

* These rates may thus be read, without reference to the decimal points:—In the March quarter of the year 1838, in 10,000 of the population 262 deaths were registered. A correction has been made in these calculations for the inequality in the number of days in the different quarters, see note to Table 6.

TABLE 30.—Proportional Number of Deaths in England in each Quarter to 1000 Deaths in the Average Quarter* of each of the Thirty-eight Years 1838-75.

YEARS.	NUMBER OF DEATHS IN THE AVERAGE QUARTER.	PROPORTIONAL NUMBER OF DEATHS				
		In the AVERAGE QUARTER (assumed to be 1000).	FIRST QUARTER ending March 31.	SECOND QUARTER ending June 30.	THIRD QUARTER ending Sept. 30.	FOURTH QUARTER ending Dec. 31.

NOTE.—The mean rates of mortality in these Town Districts have been calculated from the numbers supplied by the local Registrars in their Quarterly Returns, which served as the basis of the annual rates published from time to time in the Registrar General's Quarterly Returns and Annual Summaries.

The letter M or P affixed to the name of each Town denotes whether the limits, which the District or Sub-districts named in the last column approximately represent, are Municipal or Parliamentary.

* The area taken to represent the boroughs of Brighton, Rochdale, Huddersfield, and Halifax, was not co-extensive throughout the five years.

† The rates of mortality for these towns have been corrected by the exclusion of a proportional number of deaths occurring in County Hospitals and Lunatic Asylums, situate within the Districts or Sub-districts here taken as representing the town, or by the exclusion or addition of a proportion of the deaths in Union Workhouses in cases where a portion of the Union only is embraced by the area taken, or where the Workhouse is situated outside that area.

NOTE.—The letter M or P affixed to the name of each Town denotes whether the limits, which the Districts or Sub-districts named in the last column approximately represent, are Municipal or Parliamentary.

* For method of framing these estimates see note * to Table I. As the population of Gosport, Devonport, Coventry, Macclesfield, and Ashton-under-Lyne declined between 1861 and 1871, the numbers for these towns are estimated to have remained stationary since 1871. The estimates of the present population of Dudley and Wigan have been based upon local information as to the increase of inhabited houses in these two boroughs between 1871 and 1875.

† The rates of mortality for these towns have been corrected by the exclusion of a proportional number of deaths occurring in County Hospitals and Lunatic Asylums, situate within the Districts or Sub-districts here taken as representing the town, or by the exclusion or addition of a proportion of the deaths in Union Workhouses in cases where a portion of the Union only is embraced by the area taken, or where the Workhouse is situated outside that area.

NOTE.—The deaths in Birmingham, Manchester, and Bristol include paupers belonging to those cities who died in Workhouses situated outside the Municipal boundaries.

* The figures in this column, excepting those for Dublin, are the numbers enumerated at the Census in April 1871, raised to the middle of 1875 by the addition of $4\frac{1}{2}$ times the annual rate of increase which prevailed between 1861 and 1871. The population of Dublin is taken as stationary at the number enumerated in 1871.

Average Number living to One Annual Death in 36 years - - - }	41	44	44	40	39	41

NOTE.—The populations upon which these rates of mortality have been calculated are deduced from the numbers enumerated at the four Censuses of 1841, 1851, 1861, and 1871. The deaths used are those registered during each natural year from 1st January to 31st December.

Hampstead and Lewisham did not form part of London prior to 1847. Certain alterations affecting the West and Central groups of districts were made in the year 1868, but no corrections have been made in the results given in this Table for any year prior to 1861.

NOTE.—The numbers for 1837 were registered in the half year ending 31st December.

TABLE 47.—Area, estimated Population, and Marriages, Births, and Deaths registered in the United Kingdom, in the Year 1875.

	AREA IN STATUTE ACRES.	AREA IN HECTARES.	Estimated POPULATION in the middle of the Year 1875.	MARRIAGES.	PERSONS MARRIED.	BIRTHS.	DEATHS.
UNITED KINGDOM	77,635,301	31,416,757	32,749,167	251,170	502,340	1,112,620	726,352
Great Britain - -	56,815,354	22,991,528	27,439,673	227,133	454,266	974,300	628,238
England and Wales -	37,319,221	15,102,008	23,944,459	201,212	402,424	850,607	546,453
Scotland - - -	19,496,133	7,889,520	3,495,214	25,921	51,842	123,693	81,785
Ireland * - - -	20,819,947	8,425,229	5,309,494	24,037	48,074	138,320	98,114

* On the authority of the Registrar General of Ireland it may be assumed that the numbers of marriages, births, and deaths, in that part of the United Kingdom are understated through defective registration.

TABLE 48.—Proportion per 1000 of Marriages, Births, and Deaths to the Population of the United Kingdom, in the Year 1875.

	ACRES TO A PERSON.	HECTARES TO A PERSON.	TO 1000 PERSONS LIVING.			
			MARRIAGES.	PERSONS MARRIED.	BIRTHS.	DEATHS.
UNITED KINGDOM - -	2·37	·96	7·67	15·3	34·0	22·2
Great Britain - - -	2·07	·84	8·28	16·6	35·5	22·9
England and Wales - -	1·56	·63	8·40	16·8	35·5	22·8
Scotland - - - - -	5·58	2·26	7·42	14·8	35·4	23·4
Ireland - - - - -	3·92	1·59	4·53	9·1	26·1	18·5

Note.—The total area of a country, divided by its population, gives the average area to each person. The reciprocal gives the “density” of the population, or the population to each acre, square mile, or other measure.

TABLE 49.—Population, Area, Births, and Deaths in the Islands in the British Seas in the Twenty-five Years 1851-1875.

YEARS.	ISLANDS IN THE BRITISH SEAS.		ISLE OF MAN.		ISLAND OF JERSEY.		GUERNSEY AND ADJACENT ISLANDS.

TOTAL	1,536,683	5,391,542	1,132,437	226,058	8,286,720
Average annual emigration from the United Kingdom					135,848
					238,521

* The Customs' returns do not distinguish the emigration to Australia during the 10 years 1815-24, but it appears from other sources that the emigrants who went to this country were in 1821, 320; in 1822, 875; in 1823, 543; in 1824, 780; and in 1825, 458 persons. These numbers are not included in the totals of this Table.

† The numbers of emigrants of British origin were 228,345 in 1873; 197,272 in 1874; and 140,675 in 1875.

In the 24 years 1852-75	4,449,857	95,586	21·5

* Deduced from a return of the number of accounts of wages and effects of seamen (exclusive of masters) dying before the termination of the voyage, received by the Registrar General of Shipping and Seamen. Since 1867 the return includes seamen dying ashore in foreign parts, whose wages and effects are delivered to the consuls or officers of the hospitals on their discharge from their ships.

If a seaman die on the passage from Sunderland to Calcutta, his death is reported at Calcutta, and his wages and effects are accounted for and transmitted home, if the vessel be not to return direct to the United Kingdom. But if a passenger die on board a ship which does not return to a British port immediately, but trades for a time in foreign parts, considerable delay may occur before his death is reported. In all cases, however, the date is given; in the accompanying tables the births and deaths are classed according to the years in which they were reported. In some passenger-ships women are employed as stewardesses, and are counted as part of the crew. They therefore form part of the strength in this Table, and if the death of a stewardess occur in the course of a voyage, it is included in the column of Deaths.

When a ship is lost with all persons on board, the owners return the number and names of the crew, and the names of the passengers, when known, to the Registrar General of Shipping and Seamen.

TABLE 63.—RETURN of the AGES, RATING, and CAUSES of DEATHS of **4,076 Seamen** reported to the BOARD OF TRADE as having died in the **British Merchant Service** in the Year 1875. (*Parliamentary Return, No.398, Session of 1876.*)

TABLE 65.

ESTIMATED POPULATION OF THE UNITED KINGDOM,
(including ISLANDS in the BRITISH SEAS)
with Army, Navy, and Merchant Seamen abroad belonging thereto.*

Middle of the Census Years.	PERSONS.	MALES.	FEMALES.
1801 -	16,302,410	8,096,082	8,206,328
1811 -	18,532,522	9,194,348	9,338,174
1821 -	21,300,573	10,519,256	10,781,317
1831 -	24,423,588	12,004,025	12,419,563
1841 -	27,077,095	13,325,889	13,751,206
1851 -	27,764,034	13,656,998	14,107,036
1861 -	29,358,927	14,397,427	14,961,500
1871 -	31,914,985	15,622,725	16,292,260

* In estimating the number of men in the Army, Navy, and Merchant Service abroad, the proportion belonging to foreign countries and the colonies has been excluded. In 1811 the troops and seamen were 640,500, but as this number included natives of colonies and foreign parts, only 502,536 were taken.

The above numbers have been deduced by adding to the estimated population of the United Kingdom, as given in Table 62, the enumerated population of the Islands in the British Seas, and the Army, Navy, and Merchant Service abroad (*see* p. vii. of Vol. I. Census of England and Wales, 1871).

NOTE.—Cholera is given as being chiefly the cause of the high rate of mortality in Denmark in 1853; in Sweden in 1853, 1857, and 1866; in Austria in 1866 and 1873; in Prussia in 1866; in the Netherlands in 1859 and 1866, where also small-pox prevailed in 1871; and in France in 1865 and 1866. War contributed to the same end in Denmark in 1850 and 1864; in Austria in 1866; in Prussia in 1866, 1870, and 1871; and in France in 1870 and 1871.

M. V. Falbe-Hansen remarks that an addition of territory containing a population of about 8000 was made in 1864, and the facts relating to these are shown in this Table from 1860.

* The populations for these years were enumerated at the respective Censuses.

† Cholera was epidemic in the year 1853, and war raged in the years 1850 and 1864.

NOTE.—Previous to 1st January 1860, children who died within 24 hours after birth were counted as still-born.

TABLE 70.—SWEDEN. Population; Number, and Proportion per 1000, of Persons Married, Births, and Deaths, in each of the Years 1850 to 1875.

(Supplied by Dr. Berg, Chief of the Statistical Department of Sweden.)

1874	4,341,559	31,422	62,844	133,249	87,760†	14·5	30·9	20·3†
1875	4,383,291	30,762	61,524	135,958	88,439	14·0	31·0	20·2

* The populations for these years were enumerated at the respective Censuses. Dr. Berg attributes the decrease observable in the population in the years 1868 and 1869 to failure of crops and consequent emigration.

† Cholera was epidemic in the years 1853, 1857, and 1866. In 1874 small-pox caused 4063 deaths (the highest number in any year since 1801), scarlet fever 2418 deaths, and typhus and typhoid fever 2149 deaths.

TABLE 71.—AUSTRIA. Population; Number, and Proportion per 1000, of Persons Married, Births, and Deaths, in each of the Years 1853 to 1875.

(Furnished by Dr. A. Ficker, the Chief of the Statistical Department of Austria.)

NOTE.—The Returns for Austria include Hungary, Croatia, Slavonia, and Transylvania from 1853 to 1862 inclusive; since 1862 the returns exclude those portions of the empire. Until 1864 the States of Italy were included; since 1864, however, they are excluded.

* Census years.

† Dr. Ficker attributes the excessive mortality in the year 1866 to cholera and the war.

‡ Cholera caused the deaths of 107,007 persons in the year 1873.

TABLE 72.—PRUSSIA. **Population ; Number, and Proportion** per 1000, of **Persons Married, Births, and Deaths**, in each of the Years **1853 to 1875**.

NOTE.—The population in the four years 1862-65 and in the years 1867-69 was estimated by means of the average annual rate of increase observed between the two enumerations of 1861 and 1866. The returns since the year 1860 include the three newly annexed departments. The deaths of Frenchmen abroad, civil or military, are registered in the books of the Commune in which they were last domiciled.

* Census years.

† Cholera was prevalent in 1865-66, and war raged in 1870 and 1871.

1874*	—	—	—	—	—	—	—	—
1875*	—	—	—	—	—	—	—	—

NOTE.—The Population enumerated at the Census of 1860 was 15,673,536. The estimated Population for the Years subsequent to 1861 has been deduced from the Excess of Births over Deaths in each Year. The decline of registered marriages in 1870 is believed to be due to the introduction of civil registration, which occurred during that year.

* No figures have been received for years subsequent to 1870, in consequence of the disturbed condition of the country.

TABLE 76.—ITALY (inclusive of VENETIA). Population ; Number, and Proportion per 1000, of Persons Married, Births, and Deaths, in each of the Years 1863 to 1875.

(Furnished by Professor L. Bodio, Director of General Italian Statistics.)

NOTE.—The Population was estimated in the following manner: To the population of Italy, exclusive of Venetia, according to the census on 31st December 1861, was added the population of Venetia, according to the Austrian census in 1858, and also the excess of Births over Deaths in each year. No correction was made either for immigration or emigration. The population for 1871 (except for Rome) where the census was not taken until 1872, is that enumerated at the census on the last day of December 1871. The facts for Rome were first included with those for the kingdom of Italy in 1872.

* Census year.

† The decrease of marriages in 1866 may be attributed to the law, which then came into operation, introducing civil marriage and rendering the church marriages of no legal effect. There had been a marked increase in 1865 resulting from a wish to evade the law about to come into operation. After the 1st of January 1866 the marriages solemnized only in the churches, not being legally recognized, escaped registration; their number, which was very great in 1866 and the following year, is happily decreasing.

TABLE 77.—Changes in the Constitution of the Superintendent Registrars' Districts and Registration Sub-districts during the Year 1875.

[The Name of the District is in SMALL CAPITALS, that of the Sub-district in *Italics*. The figures in Cols. 1. and 4. show the number of the District.]

* The Registration or Union Counties consist of groups of Superintendent Registrars' Districts which are generally co-extensive with Poor Law Unions. Those Districts which extend into two or more Counties (proper) are included entirely in that County in which the principal town of the District, or the greater part of the population, is located. The boundaries of Registration Counties therefore differ more or less from the boundaries of Counties (proper).

† These figures have been furnished to the Registrar General by the Ordnance Survey Department. They do not include space occupied by the foreshore or tidal water of rivers and creeks.

Act of 6 and 7 Wm. IV. c. 86, in the Year ending December 31st, 1875.

† Where the parties to a marriage are of different religious persuasions it sometimes happens that the ceremony is performed according to the rites of both persuasions; in these cases the two ceremonies are entered as two marriages. This column also includes 69 cases of marriage after divorce, see page lxxx.

* The Registration Counties consist of groups of Superintendent Registrars' Districts, which are generally co-extensive with the Poor Law Unions. Those Districts which extend into two or more Counties (proper) are included entirely in that County in which the principal town of the District, or the greater part of the population, is located. The boundaries of the Registration Counties therefore differ more or less from the boundaries of the Counties (proper).

† These figures have been furnished to the Registrar General by the Ordnance Survey Department. They do not include space occupied by foreshore or tidal water of rivers and creeks.

MARRIAGES, BIRTHS, and DEATHS registered in the Year 1875—continued.

REGISTRATION OR UNION COUNTIES.			AREA in Statute Acres.	POPULATION, 1871.	TOTAL			BIRTHS.				DEATHS.		Excess of Births over Deaths.

* The Districts, 631 in number, are collections of contiguous Parishes or Places combined for purposes connected with the Registration of Births, Deaths, and Marriages, and are nearly always identical with the Poor Law Unions of the same names; they are arranged according to their local position under the Registration Counties. The presence of Institutions in any District is indicated in this column of the Table by *H* for Hospital or Infirmary, *L* for Lunatic Asylum, and *w* for Workhouse Establishment receiving inmates from other Districts than the one in which it stands; and repetitions of these letters show the number of such Institutions in any District.

† Wherever the minus sign is prefixed to the number in the column headed "Excess of Births over Deaths," it denotes that the Births in the District, instead of exceeding the Deaths, were, in fact, less than the Deaths to the extent stated.

II.—SOUTH EASTERN COUNTIES.—MARRIAGES, BIRTHS, AND DEATHS, 1875—DISTRICTS—*continued*.

DISTRICTS.		AREA in Statute Acres.	POPULATION, 1871.	TOTAL			BIRTHS.				DEATHS.		Excess of Births over Deaths.	
				MARRIAGES.	BIRTHS.	DEATHS.	Including Illegitimate Births.		Illegitimate Births.		DEATHS.

* The Sub-districts (2194 in number) are sub-divisions of Districts, and comprise the Parishes or Places in which the Births and Deaths are registered by Registrars severally appointed for that purpose. The letter W denotes that the Sub-district contains within its limits a Workhouse Establishment belonging to the District or Union; w indicates that a Workhouse Establishment receiving inmates from other Districts than the one in which it stands is included; H indicates a Hospital or Infirmary; L a Lunatic Asylum; and repetitions of any of these letters show the number of such Institutions in each Registration Sub-district.

† The sub-districts of St. Peter Hammersmith, St. Paul Hammersmith, and Fulham (1a; 1-3) which on the 1st April 1875 were constituted a Superintendent Registrar's District, were prior to that date part of the Kensington District (1.) In this table of Births and Deaths the facts are inserted as if the alteration had taken place on 1st January 1875.

‡ Wherever the minus sign (-) is prefixed to the numbers given in the Column headed "Excess of Births over Deaths," it denotes that the Births in the Sub-district, instead of exceeding the Deaths, were, in fact, less than the Deaths to the extent stated. The Excess of Deaths over Births is often attributable to the mortality in Institutions. The Deaths in the principal Institutions of England in 1875 are given on pages 99-119.

* The sub-districts of Tanfield and Lanchester (546: 1, 2), which on the 1st April 1875 were constituted a Superintendent Registrar's District, were, prior to that date, part of the Durham District (546 a). In this table of Births and Deaths, the facts are inserted as if the alteration had taken place on the 1st January 1875.

DEATHS IN PUBLIC INSTITUTIONS, 1875.

THE following pages contain the numbers of deaths registered during 1875 in most of the Public Institutions of England. These figures afford the means of correcting the mortality of districts and sub-districts in which Public Institutions are situated. The list includes Workhouses, Hospitals, Infirmaries, and Public Lunatic Asylums, while Prisons, Almshouses, Schools, Private Lunatic Asylums and Benevolent Asylums, are excluded. The list, as settled, includes 1380 Institutions; of which 715 are Workhouses, Workhouse Infirmaries, or Workhouse Schools; 582 Hospitals or Infirmaries; and 83 Lunatic Asylums. The Lunatic Asylums are mostly County Asylums, but a few private Asylums which receive pauper patients are also included. In these 1380 Institutions 48,154 deaths were registered during the year, or 8·8 per cent. of the total deaths in England and Wales, against 9·0 and 8·7 per cent. in the two preceding years; 30,674 occurred in Workhouses, 12,548 in Hospitals, and 4932 in Lunatic Asylums. Each of these totals exceeded the corresponding numbers in 1874, and the proportion to total deaths was 5·6 in Workhouses, 2·3 in Hospitals, and 0·9 in Lunatic Asylums.

Information relating to the deaths recorded in many Private Lunatic Asylums, and Charitable Institutions, will be found in the notes to the following pages.

Deaths registered in the Public Institutions of England in the Year 1875.

NOTE.—The Table may be read thus : Of the 282,202 deaths of Males, 75,184 were those of children under 1 year of age ; 21,918 those of the age 1 and under 2 years ; 9,922 of the age 3 and under 4 years ; 6,447 of the age 5 and under 6 years, and so on.
* This column includes the deaths of 22 males registered as aged 100 years and upwards ; namely, 10 aged 100, 6 aged 101, 2 aged 102, 1 aged 103, 1 aged 104, 1 aged 105, and 1 aged 106 years. The districts in which these deaths occurred and the cause of death in each case are stated in Table 20, page lxxxix, of Report.
The Causes of Death in England and in London, in combination with the Ages at Death, are given at pp. 146-161.

1875.

CAUSES OF DEATH AT DIFFERENT AGES IN ENGLAND
AND LONDON.

CAUSES OF DEATH IN DIVISIONS AND COUNTIES.

DEATHS FROM SEVERAL CAUSES IN DIVISIONS, COUNTIES,
AND DISTRICTS.

VIOLENT DEATHS.

The principles upon which the Causes of Death are tabled have been explained in previous Annual Reports. It will be sufficient to state now that all diseases are classified in the following and in similar Tables of Causes of Death under 116 heads; some of these heads, however, include groups of diseases which are very distinct from one another, but which either are fatal to only a *few persons*, or are often confounded with other diseases. The rule has been to refer the distinct diseases to analogous heads under which the cases were so numerous, that the additional numbers of diseases really distinct would not materially interfere with the calculated proportions. The Table for England and Wales (pp. 146–155) gives printed *in Italics* the other causes of death bracketed with the heads limited to 116 in the condensed Tables. It will be noticed, for example, that in the class of Local Diseases—such as diseases of the organs of circulation for the sake of brevity designated “Heart Disease,” in a certain number of instances the precise nature of the malady is given, in other instances all that is recorded is that disease of the organs without any further distinction.

APPENDIX.

LETTER to the REGISTRAR GENERAL on the CAUSES of DEATH in
ENGLAND, by W. FARR, Esq., M.D., F.R.S.

YEAR 1875.

SIR,

YOUR Report shows the number of deaths that were registered in the year; and I have now to inquire what light is thrown on their causes by the coroners' inquests, by the certificates of medical attendants, and by the informants in cases where there was no medical certificate.

The inquest from the date of its origin was quite of a practical nature. Death was considered under two main aspects; under the first it was referred to God or to nature, under the second it was ascribed to human agency. The death was held to be by natural causes, or by the red hand of man. Further than that point the inquest did not go. So far it was some advance on the state of things among barbarians. They distinguish in the death of a man, as they do in the death of an animal the result of violence, from death by disease; but they have no settled form of inquiry, and they know little or nothing of the different species or causes of disease. In England up to a recent date the laws took no note of the causes of disease, even after medicine had learnt to distinguish many of its various forms. And if the genius of Sydenham only led him to refer the causes of the diseases he described so well to the theory of epidemic constitution, it is scarcely to be wondered at that English legislation halted in its course, and never extended the inquiry into the causes of death further than did an institution of the middle ages. It is to a city company that is due the credit of publishing the causes of death, imperfectly reported it is true, in London, at the end of Elizabeth's reign; and that publication was prompted by the plague.

I propose now to state briefly how the causes of death have been returned by the Registrar General, and what changes have been made in their classification since the year 1837. In 1839, when the first Report was written, this was the state of things—The registers had a column headed in conformity with the schedule of the Registration Act "cause of death," which had to be filled up by information supplied by the coroners, and the informants, who were seldom medical men. Upon the application of the Registrar General the Presidents of the Colleges of Physicians and Surgeons and the Master of the Society of Apothecaries pledged themselves to this effect: "to give, in every instance which may fall under our care, an authentic name of the fatal disease." They invited all authorized practitioners throughout the country to follow their example; and to attend to an explanatory statement which, among other things, earnestly recommended them "immediately after death" to place in the hands of the qualified informants "written statements of the cause of death,"* and to use "the popular or common name of the disease whenever the popular name will denote the cause of death with sufficient precision." In every case of

* See First Annual Report of Registrar General, pp. 77-9.

inquest on any dead body, the Act says "the *jury* shall inquire of the particulars herein required to be registered concerning the death, and the *Coroner* shall inform the Registrar of the finding of the jury, and the Registrar shall make the entry accordingly."

Upon examining the registers for the last half of the year 1837, I found that they contained an ample treasury of facts, recorded more or less in conformity with the instructions. The nomenclature was in an unsettled state; and the knowledge of the "causes of death" was imperfect. To take the inquests first: the juries instead of assigning the causes of death evaded the question; they used such phrases as "accidental death," "visitation of God," "natural causes," and other terms equally vague. They had not the necessary knowledge, in cases of sudden death, to return the cause of death, even where that cause might have been evident enough to the medical jurist; and the coroner could not instruct them. The coroner of the old school was quite unfit for the new duties imposed upon him by the Act. He had little or no knowledge of medical jurisprudence, and where the knowledge was possessed there was a tendency to copy the old language of routine sanctioned by the law books. The causes of violent deaths were carefully studied, and commented on in the Statistical Nosology (1842).* In the Sixth Report, the returns of all the violent deaths of the year 1840 were analysed, distinguishing suicides, murders, manslaughters, and executions from deaths called accidental; and further, the deaths by lightning, by poisons, by burns, by asphyxia, by drowning, and by mechanical injuries of various kinds inflicted by animals, carriages, railways, manufactures, and mines. The report was sent by the Registrar General to the Coroners of England with a letter calling their attention to the new duties which had devolved upon them under the Registration Act, and offering suggestions to be submitted to the juries so as to render their findings conformable with the Act.† The "questions" it was shown "to be proposed in reference to every case of death ascribable directly to external causes are threefold: (1) was the death caused by *human agency*? did the person die by his own hands or by the hands of other persons? or was his death accidental? (2) What was the *instrument, force, or thing* by which death was caused? (3) What was the *nature* of the *fatal injury* inflicted upon the body?" The first is essentially the legal, the second the hygienic, the third the medical point of view. The *time* and the *place* have also to be distinguished. Then it is shown by examples that the causes of death cannot always be assigned in a vague word or two; several particulars have to be sought out, and those to be selected which are likely to point to fatal agencies and prevent their recurrence in future. Since that year the causes of violent deaths have been returned, at one time for groups of years but recently every year, in elaborated tables, of which the tables in the present report are examples. Thus much has been done, but much remains to be achieved under an improved organisation of the coroner's inquest.

The other deaths were returned in large numbers by the medical attendants, who as a body entered cordially into the spirit of the circular that was addressed to them by the heads of the profession. But they laboured under some difficulties. They were often called in late when the diagnosis was difficult; and in many remote regions the physician had not visited the sufferers from chronic disease for some days before death. Then there are many cases of disease obscure even where an autopsy has been instituted; and in the great majority of cases this method of verification was denied either by the reluctance of friends or by the indifference to pathology of the older class of practitioners. England is, I believe, the only country in which legal provision is made for qualified medical attendance on the sick poor; but this provision is sometimes neglected, and

* Registrar-General's Fourth Report, pp. 163-6.

† See Statistical Nosology, printed for Her Majesty's Stationery Office, pp. 67-80.

persons of all ages, more especially children and old people, are not attended at all, or are attended in their last illness by quacks and unqualified practitioners. The state of the returns and the difficulties of nomenclature are referred to in my first letter to the Registrar General,* and it is evident that, imperfect as the returns were and as the knowledge was on which they were based, the facts bearing so directly on human life were of incalculable importance.

In the year 1845† the Registrar General supplied all the qualified practitioners of England with books of blank certificates; and he instructed the registrars not to recognise the certificates of men who held no authentic diplomas. There was space for both primary and secondary diseases, against which their duration was also entered in the certificate. The “certified” cases were distinguished in the registers. The introduction of this system of medical certificates had an excellent effect; it improved the whole character of the returns; and since the year 1847‡ it has been in use with some improvements in its form. The grant of the certificates was voluntary. The new Act of 1874 (37 and 38 Vict. cap. 88.) enforces the grant of the medical certificate by penalties. The form of certificate is embodied in the regulations.

The recorded causes of death are exceedingly numerous; and it often happened that the same cause was returned under different names, which will be found in the alphabetical list at the end of the nosology. Some classification of these causes was necessary, and I at first tried Cullen’s classification, and then endeavoured to use Mason Good’s, but found that neither of them would work. It was impossible to arrange the diseases as returned under the classes and orders of the existing classifications. In casting about for a classification, it struck me that it should have special reference to the causation and prevention of death; and that would be most effectually accomplished by making three distinct groups of (1) deaths by epidemic, endemic, and contagious diseases; (2) deaths by sporadic diseases; and (3) deaths by evident external causes. This classification was framed, and used in forming the abstracts of causes of death for 1837.

After more than three years experience I discussed the principles of nosological nomenclature, and drew up the statistical nosology§ on the same basis as before,¶ but with some extensions and improvements.

(1.) The first group of EPIDEMIC, ENDEMIC, AND CONTAGIOUS DISEASES is thus defined: “*This class comprises diseases which have been observed to be epidemic, endemic, or contagious. The blood is probably, in the greater number of them, the primary seat of disease; and they may be considered, by hypothesis, the results of specific poisons, of organic origin, either derived from without or generated within the body.*”

(2.) The second group consists of SPORADIC DISEASES OF UNCERTAIN OR VARIABLE SEAT. “*This class consists of diseases of variable seat, or diseases in which the nature of the morbid product and action is, as in cancer, of more importance than the part affected.*”

(3.) SPORADIC DISEASES OF SPECIAL SYSTEMS AND ORGANS form the third group. “*This class consists of congestions, inflammations, the results of inflammations in certain parts, and mechanical or functional diseases.*” The sub-groups comprise deaths by diseases of the nervous system, of organs of circulation, of respiratory

* Report I., pp. 92-99, 1839.

† Statistical Nosology, p. 7.

‡ The causes of death were abstracted for the years 1837-8-9-40-1-2. The improvement due to the certificates was so apparent in 1847 that the new series was commenced at that date. It might not be without some use to abstract at a future time the returns for the years 1843-4-5-6, which preceded the great cholera epidemic of 1848-9.

§ See Registrar-General’s 4th Report, pp. 144-216, abstracts for 1840; published 1842.

¶ See Appendix (P.) to Registrar General’s 1st Report, pp. 92-99.

organs, of digestive organs, of urinary organs, of organs of generation, of organs of locomotion, of integumentary system.

- (4.) The fourth class consists of deaths directly referrible to EXTERNAL CAUSES: POISONING, ASPHYXIA, INJURIES.

This classification was in use with little alteration until I was requested by the International Statistical Congress, in conjunction with Dr. Marc d'Espine, to frame a project based on this resolution, passed at Brussels: "*Il y à lieu de former une nomenclature uniforme des causes de décès applicable à tous les pays.*"* My report was presented to the Congress convened by the French Government at Paris, and appears in the appendix to the Registrar General's 16th Annual Report (published in 1856). Profiting by experience and by criticism, I carefully revised the English classification, and submitted it in proof to the most eminent physicians, surgeons, and statistes of England, Scotland, and Ireland, to whom I was indebted for many valuable suggestions. The causes of death were thus definitively divided into five classes; and the classes were further sub-divided into twenty-three new orders.

STATISTICAL NOSOLOGY.

[NOTE.—The latinized names of classes and of orders are derived from Greek roots, which may help the memory, and suggest, but will never define, the classes. The English names of classes are used in nearly the ordinary senses, and "constitutional" here legitimately acquires a definite meaning. Instead of "Diseases of the Nervous System," I have employed the name "Brain Diseases"; thus designating by the name of the principal organ the diseases of all the divisions of this great system. On the same principle the diseases of the circulatory, respiratory, digestive, urinary, reproductive, locomotive, and integumentary systems are named.]

- (Z.) I. ZYMOTIC DISEASES:—*Zymotici*. (ζύμη, leaven.)
Diseases that are either epidemic, endemic, or contagious; induced by some specific body, or by the want of or by the bad quality of food.
- (C.) II. CONSTITUTIONAL DISEASES:—*Cachectici*. (καχεξία, bad habit of body.)
Sporadic diseases; affecting several organs in which new morbid products are often deposited; sometimes hereditary.
- (L.) III. LOCAL DISEASES:—*Monorganici*. (μόνος, alone, without others; ὄργανον, organ.)
Sporadic diseases, in which the functions of particular organs or systems are disturbed or obliterated, with or without inflammation.
- (D.) IV. DEVELOPMENTAL DISEASES:—*Metamorphici*. (μεταμόρφωσις, change of form.)
Special diseases, the incidental result of the formative, reproductive, and nutritive processes.
- (V.) V. VIOLENT DISEASES OR DEATHS:—*Thanatici*. (θάνατοι, violent deaths.)
Diseases which are the evident and direct results of physical or chemical forces, acting either by the will of the sufferer, of other persons, or accidentally.

Order.

- CLASS I.—1. Miasmatic diseases:—*Miasmatici*. (μίασμα, stain; defilement.)
2. Enthetic diseases:—*Enthetici*. (ἐνθετος, put in; implanted.)
3. Dietic diseases:—*Dietici*. (δίατα, way of life; diet.)
4. Parasitic diseases:—*Parasitici*. (παράσιτος, parasite.)

* For the classification recommended by the Congress, see *Compte Rendu de la deuxième session du Congrès International de Statistique*, Première annexe, pp. 349-359, Paris, 1856.

- CLASS II.—1. Diathetic diseases :—Diathetici. (διάθεσις, condition, diathesis.)
 2. Tubercular diseases :—Phthisici. (φθίσις, wasting away.)
- CLASS III.—1. Brain diseases :—Cephalici. (κεφαλή, head.)
 2. Heart diseases :—Cardiaci. (καρδία, heart.)
 3. Lung diseases :—Pneumonic. (πνεύμων, lung.)
 4. Bowel diseases :—Enterici. (έντερον, intestine.)
 5. Kidney diseases :—Nephritici. (νεφρός, kidney.)
 6. Gennetic diseases :—Aidoici. (αἰδοία, pudenda.)
 7. Bone and muscle diseases :—Myostici. (μῦς, muscle ; ὀστέον bone.)
 8. Skin diseases :—Chrotici. (χρῶς, skin.)
- CLASS IV.—1. Developmental diseases of children :—Paidiaci. (παιδία, youth.)
 2. Developmental diseases of women :—Gyniaci. (γυνή, woman.)
 3. Developmental diseases of old people :—Geratici. (γῆρας, old age.)
 4. Diseases of nutrition :—Atrophici. (ἀτροφία, atrophy.)
- CLASS V.—1. Accident :—Tychici. (τύχη, chance.)
 2. Battle :—Polemici. (πόλεμος, a battle, fight.)
 3. Homicide :—Androphonici. } (άνήρ, man ; αὐτός, self ;
 4. Suicide :—Autophonici. } φονεύω, I murder, kill.)
 5. Execution :—Demiotici. (δημιώτης, executioner.)

Here follow in the nosology the names of the several diseases in English, Latin, French, and German.

The order corresponds with the Family of Natural History. I did not think it desirable to go further so as to follow the Linnæan analogy of double names for genera and species, but to stop for statistical purposes at single names for single diseases, without distinguishing the varieties.

The causes of death were abstracted with distinction of age and sex so early as 1847, and in the 18th report* a table is given of the numbers of deaths of males and females in each of the seven years 1848-54 from the several causes classified. The causes of death for England, with the same distinctions, were given for the year 1855; and they were given in every subsequent report. Previously to 1847 the causes of death were given without distinction of age for divisions and for counties or for groups of districts.

During the course of years some changes, and I believe improvements, were made in the classification. The deaths by violence were distributed under the five orders of accident, battle, homicide, suicide, and execution, and under the sub-heads of fractures, gunshot wounds, wounds, burns, poison, drowning, suffocation, and hanging. Some new or newly discovered diseases were introduced, such as diphtheria (separated from scarlet fever in 1855), puerperal fever (separated from childbirth in 1847), want of breast milk (classed before with atrophy and debility); typhus, enteric, and simple continued fever were first distinguished in the returns of 1869, having been previously returned under the head of typhus. The returns necessarily follow the leading of the heads of science at a distance; and formerly the enteric or typhoid fever was confounded with typhus by many practitioners. Glanders was separated from erysipelas in 1855. Cancrum oris (noma) appears as a separate head in 1847. Some few diseases were transferred from order to order. The 33rd report gives the series of returns complete for the years 1838-42 and 1847-70 as regards 113 heads, according to the recent classification; and those changes are, when it is necessary,

* Eighteenth Report, pp. 120-123, 150-176.

explained in notes which should be consulted by all who have occasion to use the facts for the earlier years.

Besides the 113 diseases and injuries, there are about 153 others quite distinct in their nature, but of rare occurrence ; so to facilitate the labour of classifying the 546,453 deaths from 266 causes, under seventeen different ages, the abstract sheets were so arranged that temporarily the rare diseases were written in the margins, and the tick by which the case was denoted was at the same time made in the line devoted to some allied disease, of which the numbers were not much disturbed by the addition. Then at the end of the year the deaths by these extraneous diseases were published in a separate table. This series appears in the Reports for 1855-74.

In the present report the diseases all appear in their proper place in one table ; and those that have been introduced, printed in italics, are generally bracketed together under the cause with which in the shorter series they are grouped.

Although it has not been deemed right to go to the expense of publishing separately the causes of death for males and females at several ages in every district of England and Wales, the abstracts for each separate district are kept for reference in the library of the General Register Office.

I.—ZYMOTIC DISEASES.*

The deaths by this class of diseases numbered 106,451, and the mortality they occasioned was 4·473 in 1000, or 4473 in 1,000,000 of the population. The order of miasmatic diseases was the cause of the greater number of the deaths; namely, 99,113, and of them 20,469 were by scarlet fever, 14,280 by whooping cough. Both these diseases of the young were epidemic. Fever since 1869 has been distinguished in three forms ; and 1499 deaths were referred to typhus ; 8913 to enteric fever (*typhoid*) ; and 2651 to simple continued fever, which is recognized in the nomenclature of the committee called together by the College of Physicians, but is somewhat vague. In these latter are included 52 cases of relapsing fever. The deaths from the four forms of fever were 13,063 ; their mortality for 26 years is shown in Table 9 (p. 255). The rate was 546 (in 1,000,000 will be understood unless it is otherwise stated). This is below the rate of the previous five years and much below the rate (934) of the five years preceding them. Diarrhœa accompanies cholera and dysentery, of which it is then often a milder form. It is also a symptom of other diseases, and the direct consequence in infants of a bad dietary. The total deaths from diarrhœa were 23,982. Rheumatism, that painful disease, increased in fatality and (including rheumatism of heart and pericardium) was returned as the cause of 4044 deaths. This specific inflammation affects the membranes of the heart and is the cause of many of its lesions. Among the rarer affections, mumps was the cause of 70 deaths ; erysipelas and erythema 3091, including 37 of children after vaccination.

The enthetic order of diseases comprises the specified causes of 2509 deaths ; of which 2141 were due to syphilis ; 319 to stricture of urethra, usually the consequence of gonorrhœa. Hydrophobia was fatal to 47 persons. This disease has increased in fatality during the last six years. Only one person in the year died of glanders. Five adults died of malignant pustule.

Dietic diseases were specified as the causes of 3319 deaths. 108 were directly ascribed to privation, 1542 to the want of breastmilk including 1084 described as inanition of infancy. Purpura and scurvy, rickets and bronchocœle, show signs of increase ; in the five quinquennials of the last 25 years, the mortality was 14, 16, 19, 21, and 22. It has been well established by the medical officers of the navy, since the days of Pringle

* Table, pp. 148-149.

and Cook, that lime juice and other vegetable acids are indispensable articles of food; but that knowledge appears not to be turned to sufficient practical account in the merchant service where seamen are still often affected by scurvy. The recent distressing experiment in Her Majesty's navy will, it may be hoped, awaken general attention to this elementary dietetic fact, that the vegetable juices are indispensable articles of food. Of the deaths in the year, 273 were referred to scurvy and purpura; 196 to rickets; 56 to bronchocele; and one to cretinism. 1143 deaths were directly referred to alcoholism; 489 to delirium tremens, and 654 to the milder forms of intemperance. Deaths from delirium tremens and other forms of alcoholism did show signs of decline; but in the last year they again touched their former fatal standard.

The parasitic order of diseases was recognized as the cause of 1510 deaths; of which 1283 were by thrush.

II.—CONSTITUTIONAL DISEASES.

The diseases of this order are allied to the zymotic class, they are often hereditary, and the heterologous* formations of some of them are suspected of not only invading the separate parts of the same organism, but of infecting other bodies with which they are brought into close and frequent contact.

The diathetic order was fatal to 17,514 persons. Their mortality was lower than usual. The falling off is due to dropsy, which in modern pathology is often treated as a symptom of diseases of heart and kidneys that have simultaneously increased. It is an important constitutional complication. Gout is increasing; it was more fatal than delirium tremens. The table as well as the bottle claims the attention of dietetic reformers. Cancer is growing more common and fatal. The mortality rose progressively in the last five quinquennials, from 302 in the first to 443 per 1,000,000 in the last five years; it was 480 in 1875. Of the total deaths from this disease, 22 were due to melanosis; 47 to fungus hæmatodes; 11 to sweep's cancer: 78 deaths from lupus, 36 from polypus were for the sake of convenience grouped with cancer. In 11,220 cases the species of cancer was not described. Bed sore has to be guarded against; it was referred to as the cause of 171 deaths.

The *tubercular order* was the cause of 72,346 deaths. It includes scrofula, tabes, phthisis, and hydrocephalus. Phthisis is a most fatal disease, and it has declined in the last 25 years. So have scrofula and hydrocephalus. The reported deaths from tabes mesenterica increased. The mean rate of mortality from phthisis was 2.811 per 1000 in the five years 1850-54, and 2.283 in 1870-74. Under scrofula in the abridged tables were included 361 deaths from psoas abscess. Under phthisis are 1771 deaths from hæmoptysis; 39 from pneumothorax.

III.—LOCAL DISEASES.

This class comprises the organic diseases of particular parts of the body.

The diseases of the brain, spinal marrow, nerves, and organs of sense constitute the first order. Though only a part the nervous system animates the whole mass of the body.† Every organ has its nerves proceeding directly either from the brain or the spinal marrow. The great sympathetic is the centre of other nerve forces. The heart itself beats under nervous influences; which also agitate rhythmically the respiratory organs. So that

* "Heterologous formations" are formations of a nature not existing in the healthy tissues; for instance, cancerous and tuberculous matter.

† I saw at Rome, in the hospital San Spirito, a marvellous preparation of the nerves which occupied the whole bulk of the body; every nervous thread appeared to be isolated.

local diseases of the nervous centres affect distant parts ; but that does not deprive them of their local character. Insanity, fright, epilepsy, paralysis, shaking palsy, chorea, neuralgia, apoplexy, and cephalitis are local diseases characterized by alterations of the functions or structure of the nervous system ; some of them attended by alterations of structure, others leaving no marks which the anatomist can detect. The deaths by diseases of the order were 70,214 ; including 26,061 by convulsions, chiefly in children under one year of age. The precise nature of convulsions is not known ; the irregular muscular contractions, so fatal and so designated, arise from a variety of disorders of the teeth and of the stomach, from indigestible food, from poisons, from zymotic affections in their early stages. Inflammation fixed its fatal effects on the brain and spinal marrow in 6821 instances ; including 422 of myelitis. The deaths from apoplexy and paralysis occurring mostly in advanced life were nearly equally fatal ; 13,317 deaths being referred to apoplexy ; 12,850 to paralysis. Insanity is returned as the direct cause of death in 990 instances ; but it is often associated with other distinct diseases, such as phthisis and paralysis, under which the death of the insane patient is returned. Strictly speaking, the fact of insanity should be recorded as well as the collateral diseases, as it is difficult to say how far those diseases are associated with insanity in causing death. The unwillingness of afflicted families to see the death of their relatives referred in any way to a disease often hereditary vitiates the certificates to some extent. Great numbers die insane. 7122 deaths thrown together under brain disease are distinguished to a considerable extent in the new tables ; thus 3101 are classed under softening of the brain, called *necrencephalus* as it is a dissolution of the structure of the brain ; 192 under diseases of the spinal marrow ; 32 under idiopathic tetanus : 36 deaths were referred to ophthalmia ; 2 to amaurosis ; one to cataract ; and 127 to otitis ; 2 to otorrhœa. The affections of the ear being near the base sometimes extend to the brain.

Diseases of the organs of circulation constitute the second order ; their precise nature is not often recognized or specified. They caused together 32,510 deaths, of which 733 were by aneurism ; 777 by pericarditis, carditis, or endocarditis. Under the general term of heart disease are included deaths by angina pectoris 414 ; syncope 1531 ; phlebitis 134 ; piles 23 ; varicose veins 26. Embolism figures as the cause of 215 deaths. It is every year recognized as the cause of more deaths. Hypertrophy caused 547 deaths.

The third order consists of the diseases of the organs of respiration. It is the order the most fatal of all ; 103,627 persons died of diseases of the lungs and their appendages. These organs are of a structure delicate and elaborate in young and old. A certain quantity of air is constantly in the chest ; a certain proportion of it is exchanged through the air tubes of various sizes every three or four seconds ; and as the essence of the functions is the exchange of the oxygen of the air for the carbonic acid of the blood through an immense surface of thin membrane in every variety of atmospheric temperature and moisture, there is continual risk of reducing the temperature below the point of safety. Again, as the air is charged with particles of various kinds—some of them the seeds of zymotic disease—inspiration bringing them into contact with the mucous membrane of the nose, throat, and air-tubes easily infects the moist surfaces with their venom. The nostrils and the throat are often attacked by catarrhs, which rapidly extend to the windpipe, the air tubes, and sometimes the air cells. The larynx is the narrow portal through which every particle of vital air has to pass. Three forms of fatal disease are included in the abridged tables under laryngitis, which are thus distributed in the Table, pp. 150–151 : laryngitis proper causing 1494 deaths ; laryngismus stridulus 604 deaths ; œdema of the glottis 77. Bronchitis, which is, properly speaking, inflammation of the bronchi, was fatal in 63,089 instances. It is often, no doubt, pure inflammation, but catarrh and spo-

radic influenza are sometimes confounded under the name. The fatality of this form of disease is directly influenced by the cold weather; and the mortality in the year was much above the average. The surface of the lung, the diaphragm, and the cavity of the chest are lined with a smooth membrane, which was the seat of three distinguished diseases,—pleurisy proper the cause of 1327 deaths, diaphragmitis 2, and empyema 147. Pneumonia, or inflammation of the cells and substance of the lungs, was less fatal than bronchitis; of it 27,161 persons died, to which perhaps many of the 4141 cases of congestion arranged under diseases of the lungs should be added. That suddenly fatal disease pulmonary apoplexy killed 88 persons. Asthma has for its essential anatomical character—enlargement of the air cells—emphysema; but while 450 cases were so returned, and 7 as grinder's asthma, 3163 were returned simply as asthma. Epistaxis is more frequently fatal than is generally imagined; 72 persons died of this bleeding from the nose.

The fourth order, of diseases of the digestive organs, was fatal to 25,089 lives. The mouth, tongue, œsophagus, stomach, small and large intestines, with their confederated organs of glands, pancreas, spleen, and liver constitute the great digestive apparatus. Their mucous membranes are continuously pouring out large quantities of juices which are mingled with the food and in great part absorbed into the lacteals and the veins, leaving a small amount of waste in excreta. The mucous membranes are the seats of inflammations, ulcerations, and contractions; the thin serous membrane which, as peritoneum, covers the abdomen and its convoluted contents, is the seat either of inflammation (peritonitis) or effusion (ascites). Hernia is sometimes fatal where the strangulation is not relieved by operation. Enteritis, gastritis, and peritonitis are the most fatal diseases of the intestines. The liver is the seat of many diseases, those most fatal being hepatitis, jaundice, cirrhosis, and other unspecified affections. Dysentery, especially in India, is associated with liver abscess.

The diseases of the first four orders are the chief causes of the mortality (10,373) by the class of local diseases; the diseases of the nervous system yielding, out of every 1,000,000 living, to the harvest of death 2950; the diseases of the circulatory system 1366; of the respiratory system 4354; of the digestive system 1054. The mortality under all these heads in 1875 was above the average both of the preceding five years and of the preceding 25 years. The mortality by particular diseases of each class in period of years is shown in Table 4, Appendix.

The fifth order, of diseases of the urinary organs, is charged with 9895 deaths. The numbers are increasing year by year, and much faster than the population. The mortality was at the rate of 416. In the first quinquenniad (1850-4) it was 191; in the last, 353. The increase was constant every five years. The diagnosis by chemical reagents, and as the result of pathological research, is more advanced now among not only the heads of the profession but among general practitioners. How much the increase of nephritis, and the enormous increase of deaths referred to Bright's disease (nephria) is due to this cause, it is difficult to decide. Then diabetes, which was returned as the cause of 342 deaths in 1848, was returned as the cause of 940 deaths in 1875: its rate of mortality in the last five quinquennials was 23, 25, 28, 32, 35; and in 1875 it was 39.

Calculus has pursued an opposite course. The deaths have remained nearly stationary, but as the population has increased the rate of mortality has declined; it was 12 in the first, 9 in the last quinquenniad. This may be fairly ascribed to the discovery of the new operation for crushing stone in the bladder. The operation requires care, and it is not always that competent skill can be commanded. It is unfortunately the case that the mortality by cystitis has increased faster than that by calculus has decreased.

To each of the last three orders of local diseases from 1000 to 2000 deaths were referred.

One of the most brilliant surgical operations has reduced the rate of mortality sensibly from ovarian disease. Many young women's lives have been saved by this operation. The mortality was at the rates of 11, 12, 13, in the first three, and 11, 9, in the last two quinquennials. In 1875 the mortality rose to 14, and the deaths were 343. This might have been partly accidental, but it requires watching. The operation cannot, apparently, be performed with a fair chance of success in hospitals.

IV.—DEVELOPMENTAL DISEASES.

This class consists of four orders: the first, of developmental diseases of children, fatal to 18,703; the second, of developmental diseases of adults, to 2689; the third, of old people, to 28,514; and finally, diseases of nutrition, to 28,393.

Under the first order falls premature birth; 11,685 untimely births were recorded. Malformations count for a certain number of deaths; cyanosis for 698, spina bifida for 547, anus imperforatus for 163, cleft palate for 115, other malformations for 468. To teething 5212 deaths are ascribed, chiefly of children in their first or second year of life.

The second order of developmental diseases concerns women: 2560 women died of childbirth, exclusive of nearly an equal number, 2505, who died of puerperal fever following childbirth, and are found in the zymotic class.

The deaths of mothers being 5065, and the number of children born alive 850,607, it follows that to 1000 children born alive *six* mothers died. The Table 15, Appendix shows the mortality of mothers in London and in the rest of the country. The table bears ample testimony to the utility of skilful midwifery. In London the women receive skilful help, and the mortality is at the rate of 4.7 mothers dying to 1000 children born; in North Wales, where the mothers are left to nature or to unskilful old women, the mortality is double that of London, and 9.4 mothers die to 1000 children born. It is to be greatly regretted that the College of Surgeons have been obstructed in their attempt to carry out the law by unreflecting opposition.

The mortality of the mothers of England, notwithstanding the progress of obstetrical art, was higher in the two years 1874-5 than it has ever been since 1847.* There is no adequate provision to supply the poorer classes with skilful midwives. How long is this sacrifice of lives to go on?

V.—VIOLENT DEATHS.

The deaths by violence are increasing. They were 18,889 in number.

The first order comprises the deaths which were not referred directly to human agencies. They are neither of men killed in battle, nor homicides, nor suicides, nor executions; and are generally spoken of as accidents, but are frequently the results of negligence on the part of the life lost or others. They demand strict inquiry; as they constitute in England so large and formidable an item. 12,289 males, 4332 females,—in all 16,621 persons died these deaths. 4027, or one-fourth of the number, were children under five years of age; including 1867 infants under *one* year of age. No less than 7610 died of fractures and contusions, 3199 by drowning (subaqueous suffocation), and 1716 by suffocation on land, 2597 by burns and scalds, 153 by cuts and stabs, and 83 by gun-shot wounds. Poison was stated to be the cause of 307 deaths. In 956 cases the injury was not referred to any of those heads.

To the third order 351 homicides are referred by finding of coroners' juries; 203 of them cases of murder or infanticide, 1 justifiable homicide (age 35), and 147 of them cases of manslaughter. The definitive character of the crimes is only settled by the trial of the prisoners.

But that the deaths were caused by violence in which human agency was concerned admits of very little doubt. Of the 203 murders or infanti-

* See Table 14, p. 259.

cides 118 were of infants under one month, and 8 others were under 12 months. The different ways in which murder, infanticide, or manslaughter was committed, as far as they are described in the verdicts, are analysed in a Table (pp. 216-221).

The fourth order, of suicides, comprised 1601 deaths. There is this remarkable about deaths which are free acts of individual will, that they exhibit the least possible amount of fluctuation from year to year; thus the annual suicides in a population of 1,000,000 were in the three last quinquennials 66.6; 67.2; 67.0; and in the year 1875 the number was 67. Thus the number of suicides to be committed next year can be predicted with much greater certainty than the rainfall.

The fifth order, of *executions*, fluctuates much more than that of homicides or suicides; this is partly but not entirely due to the small number of cases concerned. The average annual number of executions in the years 1865-73 was 9; the executions in 1871 were 4, in 1872, 10; in the year 1874 *eighteen* executions were registered, and in 1875 the number rose to *twenty-three*.

By a further classification it is shown in Tables (pp. 198-221) that 1214 persons were killed on railways, exclusive of 20 who used the railway as an instrument of suicide.

Injuries by horses killed 284 persons, by horse conveyances 1305; the latter including carriages, cabs, drays, waggons, carts, and every description of vehicles drawn by horses. The great majority of the persons killed on railways or on roads and fields by horse vehicles were men. One of the deaths by horse conveyances was returned as murder and 6 were stated to be cases of manslaughter.

The introduction of every new force is followed by a certain number of deaths. The chances of death are increased. And the people about the machines and instruments, which the force animates, are untrained in their use, and so do not avoid fatal dangers that with the requisite precautions are not inevitable. This is the case with steam in all its engines; and especially in locomotives and carriages on railways.

The Board of Trade obtained returns of deaths of persons on railways; they were evidently imperfect particularly as regards the servants of the companies. This imperfection was brought to light by the abstracts which appeared in these Reports.

The subjoined Table is in continuation of a Table in the previous Report.

DEATHS CONNECTED WITH RAILWAYS.

Years.	Males.	Females.	Total.
1863	607	40	647
1864	745	51	796
1865	885	62	947
1866	837	71	908
1867	822	55	877
1868	714	83	797
1869	735	56	791
1870	861	69	930
1871	1,042	84	1,126
1872	1,068	92	1,160
1873	1,185	105	1,290
1874	1,165	84	1,249
1875	1,151	83	1,234
Total in 13 years, } 1863-75 - }	11,817	935	12,752
Annual Average -	909.0	71.9	980.9

It will be observed that the deaths of both males and females on railways—including a few cases of suicides—increased rapidly from 647 in 1863 to 1290 in 1873; they doubled in ten years. Fortunately, notwithstanding the increase of railway travelling, the next two years showed a slight decline of deaths; which can, and we may hope will, be still further reduced by several obvious precautions as regards passengers.

Might not the young and inexperienced servants of the company be drilled in some way, and so taught to avoid dangers which are so often fatal to them?

The analysis of the causes of death in England now approaches completeness, and a summary has been prepared (see pp. 272-4) to show the date of the several extensions and improvements. It will be of use to students who may have occasion to consult this remarkable series of Tables, which we may hope will some day be rivalled in other nations. At present the causes of death at the several ages of life are published in none of the great states of Europe.

Some of the States have a satisfactory system of registration and the causes of death are skilfully analyzed, but science expects more from America, which has in every state a body of accomplished statisticians and medical practitioners.

I have the honour to be,

Sir,

Your obedient servant,

WILLIAM FARR.

To

The Registrar General.

APPENDIX TABLES,
1875.

TABLE 1.—Causes of Death registered in England

CLAS.	CAUSES OF DEATH.	1848	1849	1850	1851	1852	1853	1854	1855	1856	1857	1858	1859	1860	1861

NOTE.—For the causes of death in the 5 years 1838–42, see Table 7 in the Appendix to the Thirty-fourth Annual Report. The causes of death were not abstracted for the 4 years 1843–46.

* Order 2, comprising Violent Deaths in Battle, is inapplicable to the civil population.

† The number of persons executed in the several years will not necessarily correspond with that returned for the same years in the “Criminal Returns,” inasmuch as the executions therein recorded in each year are classed according to the dates of conviction, while the numbers in this Table are placed under the years in which the deaths are registered.

in each of the 28 Years 1848-1875.

* From 1847 to 1857, inclusive, premature birth and infantile debility were abstracted together. In order, therefore, to establish something like uniformity in the above Table, the numbers for these separate headings have been estimated from the proportions which the separate numbers bore to the sum of the two in subsequent years, when they were separately classified.

† See note on page 238.

in England in each of the 28 Years 1848-1875.

* The rates given in this Table for the various groups of years are the means of the calculated rates in the several years. Under some of the separate headings the means cannot be given for the entire period, as the classification in full detail was not been made during the whole 25 years. In a certain number of cases in each year the cause of death is not stated; in calculating the proportional numbers since 1858 these have been distributed rateably over all the causes in the Table.

† Order 2, comprising Violent Deaths in Battle, is omitted, as inapplicable to the civil population.

‡ Average in 10 years.

TABLE 4.* (continued.) **Mean Annual Rate of Mortality in England from each CLASS of CAUSES and from each CAUSE of DEATH during the 25 Years 1850-74, and in each Decade and Quinquenniad of that Period; also the Rate of Mortality in the Year 1875.**

* The populations of these counties have been estimated to the middle of 1875 on the assumption that the rate of increase or decrease which prevailed between the two census enumerations in 1861 and 1871 was maintained up to the middle of 1875. The county totals have been adjusted in order to cast to the estimated total population of England and Wales.

ENGLAND AND WALES.

TABLE 26.—Statement showing the Particulars that have been published from Year to Year in the REGISTRAR GENERAL'S ANNUAL REPORTS in connection with the Abstracts of Causes of Death in England and Wales, 1837-75; distinguishing (1) those Years in which the Causes of Death were published *without Distinction of Age*; (2) those Years in which the Causes of Death were published *in combination with the Ages*; (3) those Years in which Changes in the Classification of Diseases were adopted; (4) those Years in which the above Particulars were published for Groups of Registration Districts and those Years in which certain Causes (chiefly Epidemic) were given for separate Districts.

No. of Registrar General's Annual Report.	YEAR.	PARTICULARS PUBLISHED.
1st.	1837	Causes of Death of Males and of Females <i>without distinction of Age</i> in England and in 25 Territorial Sub-divisions, from 1st July to 31st December. Causes of Death in Town and Rural Districts compared. Deaths from Epidemical Diseases in first and second quarters in Districts where these Diseases principally prevailed.
2nd.	1838	Causes of Death of Males and of Females <i>without distinction of Age</i> in England and in 25 Territorial Sub-divisions. Causes of Death in Town and Rural Districts compared. Deaths from Classes of Diseases in 11 Divisions. Causes of Death of <i>Persons</i> in 324 groups of Districts and in 11 Divisions.
3rd.	1839	Causes of Death of Males and of Females <i>without distinction of Age</i> in England and in 25 Territorial Sub-divisions. Causes of Death <i>at different Ages</i> (0, 1, 3, 5, 10, 15, 20, and <i>decennial</i> Ages up to 100) of Males and of Females in Manchester, Liverpool, and Birmingham. Deaths of Males and of Females from Classes of Diseases in 11 Divisions. Causes of Death of <i>Persons</i> in 324 groups of Districts and in 11 Divisions.
4th.	1840	Causes of Death of <i>Persons</i> in England in each of three years 1838-40. Causes of Death of Males and of Females in England, in 11 Divisions, and in Counties (for <i>Persons</i> only in London). Causes of Death of <i>Persons</i> in 324 groups of Districts. These abstracts are <i>without distinction of Age</i> .
5th.	1841	Causes of Death of <i>Persons</i> , of Males, and of Females <i>without distinction of Age</i> in England and in 11 Divisions (for <i>Persons</i> only in London); and of Males and of Females in Counties and in 324 groups of Districts. Causes of Death of Males and of Females <i>in combination with Ages</i> (0-1, 1-3, 3-5, 5-10, 10-15, 15-20, and <i>decennial</i> Ages up to 90 years and upwards, in 24 Town Districts in the year 1840. Deaths from Small-pox, Measles, Scarlatina, and Typhus in each quarter of 1841 in Divisions, Counties, and 324 groups of Districts.
6th.	1842	Causes of Death of <i>Persons</i> , of Males, and of Females <i>without distinction of Age</i> in England, and of Males and of Females in 10 Divisions (London not given in this Table), in Counties and in groups of Districts. Deaths from Small-pox, Measles, Scarlatina, and Typhus in each quarter for 1842, as in previous Report. Causes of Death in each of the years 1838-42, and Annual Mortality from each Cause to 1,000,000 Persons living. Violent Deaths in 11 Divisions, classified according to Occupations, Nature of Violent Death, and Age.
7th. (a) {	1843	The Causes of Death were not abstracted for England in these years.
	1844	
8th.	1845	
9th.	1846	
(a) In the 7th Report were published the Causes of Death in each of the years 1838-42, as in previous Report; also Causes of Death of Males and of Females <i>without distinction of Age</i> in grouped Districts of Kent; and Causes of Death, <i>in combination with Ages</i> , of Males and of Females in the county of Kent (Ages 0, 1, 2, 3, 4, 5, and <i>quinquennial</i> Ages up to 100).		
10th.	1847	Causes of Death of Males and of Females <i>in combination with Ages</i> (0, 1, 2, 3, 4, 5, and <i>quinquennial</i> Ages up to 95), in England and in 11 Divisions (107 Causes of Death). These are the first Abstracts of <i>Ages and Diseases</i> for all England.
11th.	1848	Causes of Death of Males and of Females <i>without distinction of Age</i> in England, in 11 Divisions, and in Counties.

ENGLAND AND WALES—continued.

TABLE 26 (continued).—Statement showing the Particulars that have been published from Year to Year in the REGISTRAR GENERAL'S ANNUAL REPORTS in connection with the Abstracts of Causes of Deaths in England and Wales, 1837-75 ; &c.

No. of Registrar General's Annual Report.	YEAR.	PARTICULARS PUBLISHED.
12th.	1849	Same Tables as in Report for 1848.
13th.	1850	
14th.	1851	
15th.	1852	
16th.	1853	Ditto, and Specimen Table of Causes of Death and <i>Ages</i> of Females in England, classified according to the arrangement proposed by Dr. Farr to the Statistical Congress.
17th.	1854	Same Tables as in Report for 1848.
18th.	1855	Causes of Death (107) of Males and of Females, <i>in combination with Ages</i> (0, 1, 2, 3, 4, 5-10, 10-15, and <i>decennial</i> Ages up to 95), in England. Diseases, <i>without distinction of Age</i> , of Males and of Females in England, in 11 Divisions, and in Counties. Supplementary Table for England of certain Causes of Death of Males and of Females <i>at different Ages</i> , classed for sake of abbreviation under some of the 107 heads in the Grand Table, but which are nevertheless distinct Causes of Death, though fatal to few persons. Causes of Death, <i>in combination with Ages</i> , of Males and of Females in England in the 7 years 1848-54 and in each of those years (Causes of Death and Ages the same as for 1855).
19th.	1856	Causes of Death of Males and of Females, <i>in combination with Ages</i> , in England. Causes of Death <i>without distinction of Age</i> in England, in 11 Divisions, and in Counties. Supplementary Table for England, as in previous Report. The Table of Deaths from several Causes (chiefly zymotic diseases) in Divisions, Counties, and Districts was published for the first time in this Report and has been continued in all subsequent Reports.
20th-38th.	1857 and 1858-75	The arrangement adopted in the Report for 1856 has been adhered to up to the present time, excepting that a new classification of Causes of Death was introduced in the 21st Report for 1858 ; and in that for 1859 the group of Ages 15-25 was divided thus : 15-20, 20-25. The same classification, with slight variations, of Causes of Death in combination with Ages has been published in all subsequent Reports.
—	1869	The new nomenclature of Diseases by the Committee of the College of Physicians was distributed gratis among the legally qualified medical practitioners of England and Wales.
36th.	1873	A Table was published of the Deaths by different Diseases in England classified according to the new nomenclature. It includes Deaths for the years 1866-73, and the series has since been continued.
38th.	1875	In this Report the Supplementary Table of certain Causes of Death, explained above in connection with the 18th Report for 1855, will be found incorporated with the <i>Grand Table for England and Wales</i> . The numerous diseases hitherto forming the Supplementary Table are now generally bracketed with those allied Diseases, the names of which were, for sake of brevity, intended to include them. In the Table of <i>Divisions and Counties</i> , however, the classification remains unaltered.

NOTE.—The deaths from scarlet fever and diphtheria were separately returned in 1855, having been previously to that date shown under the heading of scarlatina. The various forms of fever were not distinguished until 1869, but were all included under "typhus." In the Report for that year and in subsequent Reports the deaths from fever were classified under the three distinct forms of typhus, enteric, and simple continued fever.

LONDON.

TABLE 27.—**Statement** showing the Particulars that have been published from Year to Year in the REGISTRAR GENERAL'S ANNUAL REPORTS in connection with the **Abstracts of Causes of Death in London, 1837-75**; distinguishing (1) those Years in which the Causes of Death were published *without Distinction of Age*; (2) those Years in which the Causes of Death were published *in combination with the Ages*; (3) those Years in which Changes in the Classification of Diseases were adopted.

No. of Registrar General's Annual Report.	YEAR.	PARTICULARS PUBLISHED.
1st.	1837	Causes of Death of Males and of Females <i>without distinction of Age</i> from 1st July to 31st December. Deaths from Epidemical Diseases in Districts.
2nd.	1838	Causes of Death of Males and of Females <i>without distinction of Age</i> , and ditto in Districts. Causes of Death of Males and of Females in London and in rural Counties compared.
3rd.	1839	Causes of Death of Males and of Females <i>without distinction of Age</i> , and <i>in combination with Ages</i> , for the Hospitals. Table of Causes of Death in each of 52 weeks, 1840, and Table of Causes of Death <i>in combination with Ages</i> (0-15, 15-60, 60 and upwards) in each week May 1840 to May 1841 (reprint from Weekly Tables). Causes of Death of <i>Persons</i> in Districts.
4th.	1840	Causes of Death of <i>Persons</i> in each of the three years 1838-40, from summary of 52 weeks. Causes of Death <i>and Ages</i> for Hospitals. Causes of Death of <i>Persons</i> in the two years 1840-41, at the <i>Ages</i> 0-15, 15-60, 60 and upwards.
5th.	1841	Causes of Death of <i>Persons</i> from summary of 52 weeks, adjusted. Causes of Death <i>and Ages</i> (0-1, 1-3, 3-5, 5-10, 10-15, 15-20, and <i>decennial</i> <i>Ages</i> up to 90) of Males and of Females in each of the four quarters of 1842, and similar Table for the whole year. Causes of Death <i>at Ages</i> 0-15, 15-60, 60 and upwards, in the two years 1840-41. Summary of Weekly Tables, 1842.
6th	1842	Causes of Death of <i>Persons</i> <i>without distinction of Age</i> .
7th.	1843	Causes of Death <i>and Ages</i> of Males and of Females (<i>Ages</i> 0, 1, 3-5, 5-10, 10-15, 15-20, and <i>decennial</i> <i>Ages</i> up to 90).
	1844	Causes of Death of Males and of Females (same <i>Ages</i> as in previous Report), 52 weeks.
8th.	1845	Causes of Death of Males and of Females (<i>Ages</i> 0, 1, 2, 3, 4, 5, and <i>quinquennial</i> <i>Ages</i> up to 95), 52 weeks. Ditto for the year 1846.
9th.	1846	Causes of Death of <i>Persons</i> without distinction of Age in each quarter of each of the years 1840-47.
10th.	1847	Causes of Death (107) of Males and of Females <i>in combination with Ages</i> (0, 1, 2, 3, 4, 5, and <i>quinquennial</i> <i>Ages</i> up to 95).
11th.	1848	Same particulars as in Report for 1847.
12th.	1849	
13th.	1850	
14th.	1851	
15th.	1852	
16th.	1853	
17th.	1854	
18th.	1855	Causes of Death (107) of Males and of Females <i>in combination with Ages</i> (0, 1, 2, 3, 4, 5-10, 10-15, and <i>decennial</i> <i>Ages</i> up to 95).
19th.	1856	Causes of Death of Males and of Females <i>in combination with Ages</i> .
20th-38th.	1857 and 1858-75	The arrangement adopted in the Report for 1856 has been adhered to up to the present time, excepting that a new classification of Diseases comprising Classes and Orders was introduced in the Report for 1858; and in that for 1859 the group of <i>Ages</i> 15-25 was divided thus: 15-20, 20-25. The same classification, with slight variations, of Diseases in combination with <i>Ages</i> has been published in all subsequent Reports.

NOTE.—The first Weekly Table for the Metropolis appeared for the week ending Saturday, the 11th January 1840. This publication, with numerous improvements, has been continued ever since. From 1840 to 1850, inclusive, the deaths, classified according to *diseases*, were obtained for the Annual Reports from the 52 or 53 weeks of each year; in 1851 and in subsequent years, however, the deaths were abstracted a second time for the Annual Reports.

INDEX OF DISTRICTS.

[The following Index furnishes a reference to the *Number* of each REGISTRATION DISTRICT in the topographical arrangement adopted in the Tables of Abstracts contained in the Report. The alphabetical arrangement places compound names in the order in which they are pronounced: thus, East Ashford will be found under the letter E, and *not* under A.]

In consequence of numerous alterations (amalgamations of districts and formations of new districts) since the numerical arrangement, 1 to 623, was adopted in the Abstracts for the year 1847, the districts were re-numbered consecutively from 1 to 627 in the Abstracts for the year 1871.*

For names of Towns, such as Leamington, Torquay, &c., which are not found in this "Index of Districts," see the "Index of Sub-districts" (page 279) and "Index of certain Towns" (page 289).

INDEX OF SUB-DISTRICTS.

[This alphabetical arrangement places the Registration Sub-Districts (or Registrars' Districts) having *compound names* in the order indicated by the usual pronunciation of those names; thus, East Grinstead will be found under the letter E, and not under G; St. James under the letter S, and not as "James, St." The number against each Sub-District, in the third column, refers to its numerical place in the Tables of Abstracts; thus, Abbey Holme (570; 2) is the 2d Sub-District of the Wigton District, No. 570.]

SUB-DISTRICT.	DISTRICT.	No.	SUB-DISTRICT.	DISTRICT.	No.	SUB-DISTRICT.	DISTRICT.	No.
A			Ardleigh . . .	Tendring . . .	194; 5	Baschurch . . .	Ellesmere . . .	354; 4

Estimated Population; Number, and Proportion to Population, of Persons married, Births, and Deaths, in each of the Years 1853–75. (Table 71.)	cxv
 BARNSELEY; Area, Population, and Mortality. (Table F.)	xxxiv
Sanitary condition of	xxxvi
BARROW-IN-FURNESS; Population in 1871, 1874, and 1877. (Table)	xxxii
BIRTHS in 1875	xxiv
Illegitimate; decline in the proportion of	vi
Extension of Time for gratuitous Registration	xxiv
Sex	xxv
of Still-born Children	xxv
proportional Number of Illegitimate to 100 Births in certain Counties, 1874–75. (Table C.)	xxvii
and Deaths of Infants, and Marriages of Minors, in 24 Registration Districts, 1871–75. (Table K.)	xlv
out of Wedlock	xxvi–xxvii
Legitimate to every 100 Married Women, 1861–70	xxvii
registered in England, and excess over Deaths, in each Year, 1838–75. (Table 1.)	lxx
Number of Persons living to one Birth. (Table 2.)	lxxi
Legitimate and Illegitimate in England in 1842 and in the Years 1845–75, and Proportion of Males to Females. (Table 12.)	lxxx
proportion of Illegitimate Children to every 100 Births in the several Counties of England in each of the Years 1865–75. (Table 13.)	lxxxii
registered in England in each Quarter of the Years 1838–75. (Table 14.)	lxxxiii
proportional Number of Births in each Quarter to 1,000 Births in the average Quarter of the Years 1838–75. (Table 15.)	lxxxiv
in Counties, in 1875. Numbers, Sex, Legitimate and Illegitimate; Proportions of Male to Female Births, Legitimate and Illegitimate. (Table 16.)	lxxxv
proportion of Male and Female Children born in the several Counties of England during each of the Years 1865–75. (Table 17.)	lxxxvi
in Fifty large Town Districts in 1875. (Table 37.)	cv
in Twenty-one large Towns of the United Kingdom in 1875. (Table 38.)	cvi
in London in the Years 1863–75, distinguishing Males and Females. (Table 40.)	cvi
excess over Deaths in London in each of the Years 1863–75. (Table 40.)	cvi
in the United Kingdom in 1875. (Table 47.)	cxv
in the Islands of the British Seas in the Years 1851–75. (Table 49.)	cxvi

	PAGES
BIRTHS—continued.	
of British Subjects at Sea, in the Years 1856-75. (Table 61.)	cxxiii
registered in each of the Divisions, Counties, Districts, and Sub-districts in 1875, distinguishing Males and Females and the Illegitimate	30-84
excess over Deaths in each of the Divisions, Counties, Districts, and Sub-districts in 1875	30-84
registered in the Divisions and Counties (distinguishing Males and Females) in each of the Four Quarters of 1875	86-89
of Children out of Wedlock registered in the Divisions and Counties (distinguishing Males and Females) in each of the Four Quarters of 1875	90-93
in Foreign States. (See FOREIGN STATES.)	
illegitimate. (See ILLEGITIMATE BIRTHS.)	
BIRTH-RATE in England in 1871-75	xxv
in various Counties affected by the number of Married Women aged 15-45	xxv
in certain Counties 1874-75, and Mean of 1864-73. (Table B.)	xxvi
in England in each of the Years 1838-75. (Table 2.)	lxxi
in England in each Quarter of the Years 1838-75. (Table 14.)	lxxxiii
in Counties in each of the Years 1865-75. (Table 18.)	lxxxvii
in Fifty large Town Districts in 1875. (Table 37.)	cv
in Twenty-one large Towns of the United Kingdom in 52 Weeks, 1875. (Table 38.)	cvi
in London in each of the Years 1863-75. (Table 40.)	cvii
in the United Kingdom in 1875. (Table 48.)	cxv
in Foreign States. (See FOREIGN STATES.)	
BRAIN DISEASES	231-232
BRONCHITIS ; Mortality above the average	233
BURKE, DR. , on the low birth-rate in Ireland	vii
BURNS AND SCALDS. (See VIOLENT DEATHS.)	
BURY ST. EDMUNDS ; Area, Population, and Mortality (Table F.)	xxxiv
Sanitary condition of	xxxiv
CANCER , increasing fatality of	231
Area, Population, and Mortality. (Table F.)	xxxiv
CANTERBURY , Sanitary condition of	xxxiv
CAUSES of DEATH ; of 4076 Seamen in the British Merchant Service in 1875. (Table 63.)	cxxv
of Males and Females in England, classified under 266 heads, at different Periods of Life, in 1875	146-155
of Males and Females in London at different Periods of Life, in 1875	156-161
of Males and Females in England, and in each of the Divisions and Counties, in 1875	162-185
(from certain zymotic diseases and other Causes) in 1875, in the Divisions, Counties, and Districts of England	186-197
Dr. Farr's Letter to the Registrar General thereon	225-236
how returned by the Registrar General since 1837	225
registered in England in each of the Years 1848-75. (Table 1.—App.)	238-243

	PAGES
CAUSES of DEATH— <i>continued</i> .	
rate of Mortality from, to a Million persons living in each of the Years 1860-75. (Table 2.—App.)	244-246
proportional Numbers dying from each Cause in 1875. (Table 3. —App.)	247
rate of Mortality from, during 25 Years, two Decades, five Quin- quennials, and in 1875. (Table 4.—App.)	248-251
in England, in 1875, arranged in the order of their fatality. (Table 5.—App.)	252
of Persons, Males and Females, in 1875, classified according to the nomenclature recommended by the Committee appointed by the Royal College of Physicians of London. (Table 24.— App.)	267-271

Mortality of Merchant Seamen at Sea, 1852-75. (Table 62, p. cxxiv.)	lviii
Causes of Death, Rating, and Ages of Merchant Seamen reported in 1875. (Table 63.)	cxxv

SEARCHES; Average Annual number of, in six Quinquennial Periods 1845-74, and in 1875. (Table.)	liii
Particulars relative to Searches made in 1875	liii
Aggregate number of Names on the Registers and number of Searches. (Table 46, p. cxiv.)	liii
Amount received in fees for Searches in 1875	liii
” ” ” ” 1838-75. (Table 46.)	cxiv
SEASONS; Influence of, on Mortality	xxxii
SEX; Proportion of Male to Female Births decreasing	xxv
Number and Proportion of Males and Females born in and out of Wedlock in Counties in 1875. (Table 16.)	xxxv
Proportion of Male and Female Children born in the several Counties of England in each of the Years 1865-75. (Table 17.) . . .	lxxxvi
(See also BIRTHS and DEATHS.)	
SPAIN; Average Annual Proportion to Population of Persons married, Births, and Deaths, 1861-70. (Table T.)	lviii
Marriage, Birth, and Death Rates compared with those of other European States. (Table 67.)	cxxix
Estimated Population; Number, and Proportion to Population, of Persons married, Births, and Deaths in each of the Years 1861-70. (Table 75.)	cxxxiii
STARVATION; Deaths from, in the Eleven Years 1865-75, distinguishing Locality, Sex, and Age. (Table 11.—App.)	257
STATISTICAL NOSOLOGY	228-229
STILL-BORN CHILDREN	xxv-xxvi
Provisions of the new Registration Act relative to	xxvi
Registration of, in France	xxv-xxvi
SUB-DISTRICTS; changes in the constitution of, during 1875. (Table 77.)	cxxxv
Alphabetical Index of	279-288
SUICIDES of Males and Females in England at different Ages during the Year 1875	212-213
of Males and Females in each of the Eleven Divisions during the Year 1875	214-215
Proportion to every 1,000,000 of the Population of England, 1860-75. (Table 2.—App.)	244-246
SWEDEN; Average Annual Proportion to Population of Persons married, Births, and Deaths, 1853-72, and in 1873, 1874, and 1875. (Table T.)	lviii
Marriage, Birth, and Death Rates compared with those of other European States. (Table 67.)	cxxix
Population; Number, and Proportion to Population, of Persons married, Births, and Deaths, 1850-75. (Table 70.) . . .	cxxxi
SYPHILIS, Deaths from	230
TEMPERATURE; effects of, upon Mortality, in 1875	xxx-xxxii
Mean at Greenwich in each week of 1875. (Table 35.)	ciii
Mean in 1875 in 21 large Towns of United Kingdom. (Table 38.)	cvi
(See also METEOROLOGY.)	
TOWN AND COUNTRY DISTRICTS.	
Annual and Mean Mortality in the 29 Years 1847-75. (Table D.)	xxix
Area; Population 1861 and 1871; Annual Rate of Mortality per 1000 in each Quarter of the Years 1865-75. (Table 32.)	ci

TOWNS; Mean Temperature at Greenwich, Annual Rate of Mortality in each week of 1875, in London and 17 other large English Towns. (Table 35.)	ciii
Mortality from all Causes, and from seven Zymotic Diseases in Fifty large Town Districts in each of Five Years 1871-75. (Table 36.)	civ
Population, Births, Deaths; and Birth and Death Rates in 1875 in Fifty large Town Districts. (Table 37.)	cv
Population, Births, Deaths; Birth and Death Rates; Temperature and Rainfall in 1875, in London and Twenty large Towns of the United Kingdom. (Table 38.)	cvi
Deaths from several causes, and Mortality in 17 large English Towns in 1875. (Tables 17-18, App.)	263
Deaths and Mortality in 17 large English Towns 1870-75, from Small-pox, Measles, Scarlet Fever, Diphtheria, Fever, and Diarrhœa. (Tables 19-24.—App.)	264-266
Index of certain Towns whose names differ from those of the District and Sub-district in which they are respectively situated	289
TURKEY; Estimated Population of Turkey in Europe. (Table V.)	lx
Area and Estimated Population of the Turkish Empire. (Table W.)	lxi
TYPHUS. (See FEVER.)	
UNITED KINGDOM; Emigration in 1875	x-xiii
Estimated Population, Mortality, &c. of, in 1875	liv-lv
Area, Estimated Population, Marriages, Births, and Deaths, in the Year 1875. (Table 47.)	cxv
Density, and Proportion, per 1000, of Marriages, Births, and Deaths to the Population in 1875. (Table 48.)	cxv
Emigration in each of the Years 1815-75, distinguishing Destination. (Table 50.)	cxvii
Emigration in the Year 1875, distinguishing the Destination, Sex, Age, Condition, Occupation, and Nationality of the Emigrants. (Tables 51, 52.)	cxviii-cxix
Estimated Population of both Sexes, distinguishing England, Scotland, and Ireland, in the middle of each of the Years 1801-77, <i>excluding the Islands in the British Seas, the Army, Navy, and Merchant Seamen Abroad.</i> (Table 64.)	cxxvi-cxxvii
Estimated Population of both Sexes (<i>including the Islands in the British Seas, the Army, Navy, and Merchant Seamen Abroad</i>) in the middle of the Years 1801, 1811, 1821, 1831, 1841, 1851, 1861, and 1871, and the Logarithms of the same. (Tables 65, 66.)	cxxviii
URBAN AND RURAL DISTRICTS; relative Mortality in	vii
URINARY ORGANS; increase in Deaths from diseases of	233
VIOLENT DEATHS; of Males and Females in England at different Ages during the Year 1875	198-204
of Males and Females in each of the Eleven Divisions during the Year 1875	205-211
in 1875, Remarks on	234-236
of Males and Females on Railways in each Year 1863-75	235
WARRINGTON; Area, Population, and Mortality. (Table F.)	xxxiv
sanitary condition of	xxxv
WEATHER. (See METEOROLOGY.)	

WHEAT; Average Price of, 1852 to 1875, and each Quarter, 1865-1875. (Table 34.)	cii
WHITBY; Area, Population, and Mortality. (Table F.)	xxxiv
sanitary condition of	xxxvii
WHITEHAVEN; Area, Population, and Mortality. (Table F.)	xxxiv
sanitary condition of	xxxix
WILLIAMS, F. J., on the Mean After Lifetime of Men and Women, Married and Unmarried	lxiii-lxiv
WILLS; Calendars of, kept at the General Register Office, where searches may be made	lix
WREXHAM; Area, Population, and Mortality (Table F.)	xxxiv
sanitary condition of	xxxix
ZYMOTIC DISEASES; Death-rate from seven zymotic diseases in Fifty large Town Districts in 1875. (Table 37.)	cv
Remarks on	230-231
Death-rates from, in 18 of the largest English towns in 1875. (Table 18.—App.)	263
Deaths from, in England	146-149
„ „ London	156-159
„ „ Divisions and Counties	162-165, 168-179
„ „ several, and from certain other causes, in Divisions, Counties, and Districts	186-197
„ „ in England, in each Year, 1848-75. (Table 1.—App.)	238-241
„ „ to 1,000,000 Persons living in each Year 1860-1875. (Table 2.—App.)	244-245
„ „ proportional number in 1,000,000 deaths in 1875. (Table 3.—App.)	247
Mean annual rate of mortality from, during 25 years, two Decades, five Quinqueniads, and in 1875. (Table 4.—App.)	248-249
Death-rates from, and from certain other diseases in Counties. (Table 6.—App.)	253
(See also under names of several Zymotic diseases.)
